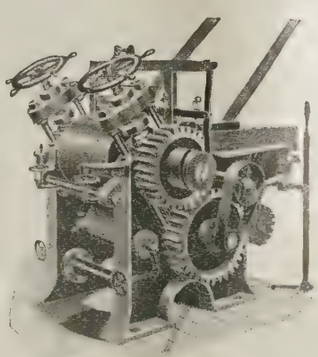
bond. They are not permitted to
during the process of manufacture,
flavoring substances which increase
weight of the tobacco. Pure olive
up to 4 per cent of the weight of
obacco, may be used in the spinning
ess. The only flavorings which may
dded are essential oils dissolved in spirits. The use of licorice, glycerine, honey, syrups, sugars, etc., is prohibited, on account of the additional weight added to the tobacco by using these materials. These are the same restrictions which are in force in Great Britain.—LAMM.

Greece Levies Additional Tax on Tobacco Exports

WASHINGTON, D. C., July 30.—The following additional taxes have been imposed upon exports of tobacco, by a decision published in the *Official Greek Gazette*, May 30, says Clerk to Trade Commissioner Charles E. Dickerson, at Athens. The proceeds from these taxes are to be devoted to the support and shelter of refugees and improvement of local sanitary conditions:

Commencing April 27, on tobacco leaves of any quality exported from Cavalla, 20 leptas ($0.02).

Commencing with the date of the promulgation of the decree, on each package loaded on omnibus trains at the railway station of Verria, 20 leptas; on each package loaded on passenger trains at the station of Verria, and on cars fully loaded at Verria, 15 drachmas ($2.89½).



Child Labor Investigation

WASHINGTON, D. C., Aug. 1.—An investigation of the use of child labor in the tobacco fields has just been completed by experts of the Children's Bureau of the Department of Labor. The investigation was carried out in the fields of Kentucky, South Carolina, Virginia, Connecticut and Massachusetts. It is understood that it will be some time before results of the survey will be ready for publication.

Optimo Brand Progressing

Mariano Alvarez, Tampa manager for A. Santaello & Co., manufacturers of the Optimo cigar, who has been spending his vacation in New York, returned to Tampa last Monday. Mr. Alvarez found time to discover that the Optimo brand was gaining in favor in the metropolitan district, and is anticipating increased production in the near future.

Connecticut Crop Presents Excellent Outlook

Growers Have Been Working Hard to Good Purpose—Looking Forward with Great Enthusiasm—Rich Harvest Anticipated—Association Members Enjoy Mid-Week Picnic.

HARTFORD, July 29.—The tobacco grows all through the Connecticut Valley ive been working hard on their crops, id it can be said that it has been many ars since they have displayed such a ioyant and enthusiastic spirit over the ospects of a banner crop. The past ree weeks have made up for the backardness of the planting season, and the ants in the fields have made a most onderful growth. There are some late t fields where the tobacco is still small, t these fields show great improvement iring the past few days.

The rain of Tuesday night came at a ne when it was needed, and since then e plants have just "hopped" right along. A large portion of the crop has now en topped and the shade growers have tten the work of priming well started. iere are some crops in the Hockanum strict of East Hartford where cutting ill have to start within ten days.

The crop is one that makes the grower el satisfied that he has now in his lds a product such as he has not had r several years, and with continued vorable conditions he will harvest a op that will open the eyes of the trade.

Plants Show Good Color

Go where one may and it will be hard find any yellow and dried up spots, atures that were so prominent in the st few crops. Nothing but a healthy, rk green color is now observed. From y to day everyone notes the remarkable owth of the plants. Not only are the owers proud of their crops, but the ckers, who have been taking "fresh air des" through the tobacco belt, all agree at the 1923 crop is blocked out for a nner harvest. All agree that the plants ave got the quality in them, and that e crop should weigh much more than has the past few years. Thus far the ason for the growing of the crop has en ideal; although the nights have en unusually cool, the middle of the y has been very hot for the past three eeks.

Enthusiastic Over Outlook

Joseph Cullman of New York has been town for a few days looking over the tuation and is very enthusiastic over e prospects of the 1923 crop. He prects that the Valley will harvest the iest crop it has grown for several years.

The estate of C. W. Porter, recently ceased, is estimated at about $150,000. Mr. Porter was connected with the firm L. B. Haas & Co. for about 30 years, id was also a successful independent rower. He had a crop of 30 acres of avana stalk tobacco growing at the time f his death.

To Show Tobacco at Two Expositions

At the July meeting of the Board of Directors of the Connecticut Valley Tobacco Association it was voted to make n exhibit at the Eastern States Exposion to be held in Springfield, Mass., eptember 16 to 22, 1923; also at the nternational Tobacco Industries Exposion to be held in New York City, Janary 28 to February 2, 1924. Two spaces omprising 600 square feet of floor area ave been rented for the New York show, nd a space of 30 x 12 feet has been ssigned by the Eastern States Exposition anagement. At each of the shows much dvertising of Connecticut tobacco will be done which heretofore has been neglected.

A Big Outdoor Event

The first annual picnic of the Connecticut Valley Tobacco Association was held at Riverside Park, Agawam, Mass., last Wednesday and was a grand success. Growers with their families gathered from the different tobacco growing towns in Connecticut and Massachusetts, and all had a "grand and glorious feeling," inasmuch as on Tuesday night before, and early Wednesday morning, a "made-to-order" rain made the tobacco look 100 per cent better. The growers of East Hartford assembled at a starting point, with autos all decorated, and paraded through the tobacco growing towns to the park. At both South Windsor and East Windsor more growers "fell into line," so when they arrived at the park there were upwards of 100 autos in line.

At 11 o'clock President Alsop gave a short address, followed by the entire party singing, "Hail, Hail, the Gang's All Here." The enthusiasm was something great. From 12 to 1 was the "get-acquainted" hour; each member had a white badge, on which was printed in tobacco brown ink the wearer's name. By this means all got acquainted very easily. The amusement section of the park was well patronized and many "rare stunts" were pulled off to the merriment of the onlookers.

The luncheon hour was an important one. Reservations had been made for basket lunch; some went to the restaurtables at the park, for those who had a rant. The East Hartford members had arranged for a lunch prepared to order. Following the "eats" the band rendered a concert program in the dancing pavilion, and for two hours many of the growers had a "good time" dancing.

The Star Feature

The athletic program started at 4 o'clock, the first event being a 100 yard dash between General Manager Griffin and Secretary Whitmore, which resulted in a tie and a challenge each to the other for another opportunity next year.

The 75 yard dash for girls was won by Miss Celia Kennedy of Suffield, who received an umbrella.

The final event was the ball game between Connecticut and Massachusetts growers for the association championship. Seven innings were played, the Connecticut team winning 11 to 0.

The outing was a grand success and everyone gives L. P. M. Hickey, field service manager, great praise for the way the plans were worked out. Judge Hickey has worked hard, both day and night, first to form the association, and after its formation to keep the "ball rolling" for absolute success of the association. He is here, there and everywhere and always at the wheel and ready to give sound advice to any grower at any time.

Makes Foreign Connections

L. F. Theyskens, vice-president of Theyskens & Shaw, is due to arrive in New York next Saturday on the S. S. *Belgenland*. Mr. Theyskens has been in Europe since last February, where he has established many connections, to handle the exports of tobacco from the United States for his organization.

Danville Dealers Go to South Carolina Marts

DANVILLE, Va., July 30.—The past few days have seen the annual exodus of Danville tobacco men to the markets of South Carolina and those in North Carolina on the Carolina line where the season has opened. Reports from some of these tobacconists indicate a larger crop than usual and an exceptionally good one. One reason for the increase in acreage is the fact that the ravages of the boll weevil on cotton have resulted in the elimination of that crop on some farms and a concentration on tobacco.

Bright Crop Greatly Improved

In the bright belt, and especially in this area, the crop of tobacco has shown remarkable improvement as result of heavy local rains, and there is no longer any feeling of pessimism which came with a prolonged drouth following a late planting season. M. O. Nelson, who has gone to Whiteville, S. C., to operate a warehouse for the early season, made a tour of this section and reported that conditions were by no means as bad as they were painted three weeks ago. He estimates that the crop will be twenty per cent smaller than that of last year, this being due to the shortage of plants following the destruction of plant beds by late frosts and cold weather, and the general shortage of farm labor which is complained of bitterly by many farmers.

Higher Prices Expected

Mr. Nelson is of the opinion, however, that the reduction of the crop will be a blessing in disguise to the farmers since it will reflect a higher price average. The Danville market will open on September 25, unless the trade organization sees fit to delay it. There is an opinion that should the month of August reveal a slow maturing of the crop it would be best to delay the opening of the local market until October 1.

The Co-operative Marketing Association has not formally announced the date on which deliveries of leaf will be received here. More than likely it will be on the same date as the opening of the auction houses.

Pros and Cons "At It Again"

After months of quietude, the propaganda war has sprung up again between the forces allied with the auction system and the co-operative system. The warehousemen are trying for a knockout of the co-operative method and are reporting that the "co-ops" have made a poor start in South Carolina, where the movement is less strongly entrenched than it is in Virginia. The "co-op" leaders are meeting the issue with feasts of oratory, calling for faith in the future, and with statements purporting to show that the lot of the farmer under the co-operative regime is better than under the old system. Both organizations now have their propaganda headquarters with the marketing association offices at Raleigh, while the warehousemen are conducting their campaign largely from Wilson, N. C., whence emanate fearless attacks.—TETLEY.

Dealer Says More Tobacco Used in Summer

CHARLESTON, W. Va., July 28.—It is a very peculiar and more or less paradoxical fact that the intense heat of the Summer months causes no decrease in the amount of tobacco consumed by devotees of the great god, "Nick O'Teen." One would naturally suppose that a man would shun all manner of superfluous heat such as comes from a pipe or cigarette. The chief ambition of everyone seems to be to keep cool, but the facts indicate that many are not consistent in carrying out this aim, for there is much more tobacco used in the Summer than during the Winter months.

This is according to a local tobacco dealer who says that his sales have increased during the hot period for several years. John J. Wolfe, Wheeling, general manager of one of the largest stogie plants in the state, in writing of supply and demand, says the sales increase from last Winter to the present time amount

o about 10,000,000 stogies. Other manuacturers give similar reports.

Tobacco dealers in general advance his theory to explain the situation: During the Summer months the heat and ill its varied problems have a tendency o irritate the nervous system and to cause a state of irritability that is never present during the cool months, and, because of the soothing effect of tobacco, it s in great demand as a counter-irritant and soothing agent.

Excellent Quality Crop at Wendell

WENDELL, N. C., July 28.—The farmers in this vicinity have just commenced curing one of the largest and best quality crops of tobacco grown in several years. The crop as a whole is about two weeks ate caused by a late spring and followed by very dry weather until the first of July, but frequent showers have fallen very regularly since, barely enough to run in the fields, but just enough to give tobacco the proper growth to make a good crop, and the farmers are now enjoying the very promising prospects for a successful crop both as to quantity and quality.

Market to Open August 22

The Wendell Tobacco Market will open Wednesday, August 22, with three auction warehouses in operation. The Farmers Warehouse will be operated by Wiggins & Hobgood; the Star by Talton & Pruitt, and the Northside by Harris & Hobgood. Many improvements are being made on all three of the warehouses and all of the parties are now actively engaged in making the final arrangements for handling one of the largest crops on record for this market, and traveling among the growers discussing the crop and bright prospects for good prices, etc. When the market opens all of the soliciting will be done on the sales floors. The usual good services will be rendered and the growers will be paid the highest number of dollars for their year's toil. All of the large companies will have buyers on hand as heretofore; also many independent buyers for smaller manufacturers and others are expected to be in attendance.—J. C. COLLINS, Secretary Wendell Tobacco Board of Trade.

Quality Big Factor in Fixing Tobacco Price

KINSTON, N. C., July 28.—Quality is the biggest factor in the fixing of the price of tobacco, board of trade officials here state. For that reason, eastern Carolina growers should receive a profitable average price after the opening of the bright leaf markets next month. "The condition of the crop in this section appears to be better than in many years," it was stated by Hunter L. Fleming, a past president of the board.

"The weed in the fields is strong and healthy. The 1923 'weed' will show up to good advantage on the warehouse floors," Fleming declared. This view was shared by all other local authorities who expressed themselves.

In some districts farmers are claiming the finest crop in 10 years. Some reports are extravagant. In the Contentnea Neck section of Lenoir County growers are boasting the "best crop since culture of the weed started in this belt." Fields have been stripped of a large part of the crop, curing having been in progress nearly a month. Local pack-houses today held between 10,000,000 and 20,000,000 pounds of the golden leaf.

A word of caution was advanced by officials of the independent market, who said there was danger of "rushing the market" as a result of the early curing. The great bulk of the crop will be stored in the barns ere the market opens August 21. "Orderly marketing" will help the price situation, board of trade men declared. "The slower the better," they added.

Leaf Diseases Cause Annual Loss of Millions

By W. D. VALLEAU

Little is known concerning the leaf-spot diseases in Kentucky other than what has been gathered from conversations with tobacco growers concerning previous outbreaks and what was learned in studying the diseases the past season.

During 1920 three distinct leaf-spot diseases of Burley and black tobacco contributed to the damage. Each is due to a different cause and represents a distinct disease. The three diseases are wildfire, angular leaf-spot, and a third disease, not so well recognized, which we will speak of as mosaic speck spot. The last is of comparatively little economic importance as a leaf-spot disease, but will be described here because it may be confused with one of the others.

Wildfire caused serious injury in the seed beds the past season, appearing first about the fifteenth of May and continuing to do serious damage for two weeks. Further trouble was not reported until the middle of July, about a week after a severe rain and wind storm. At that time wildfire and angular leaf-spot caused very serious losses in several fields in which the tobacco was making very rapid growth. Practically no injury was caused on small tobacco at this time. In August, following a rainy period, both diseases spread very rapidly and caused serious losses throughout the Burley section. In the latter part of August the diseases spread rapidly in the dark tobacco section. From this time on they continued to cause serious losses following every rain storm where wind was present.

As far as could be learned, wildfire appeared for the first time in the Burley district of Kentucky in 1920, at least as a serious disease. Conversations with many growers failed to bring forth evidence that the disease had been present before. Angular leaf-spot, on the other hand, appeared to be quite well known by many growers, who called it "rust." Serious losses have been caused in isolated localities by this disease for at least twenty years; in some cases reports were obtained of the loss of entire crops, undoubtedly due to the angular leaf-spot organism.

In the black tobacco section a little evidence was gathered which might indicate that wildfire had been present there, causing a part, at least, of the losses from the disease popularly known as "black fire."

Angular leaf-spot undoubtedly has been present in the dark tobacco section for a long time, causing part of the losses from "black fire" and the leaf-spot trouble spoken of as rusts.

Cause

Wildfire is caused by a definite plant organism spoken of technically as a bacterium (Bacterium tabacum) and is not caused by weather or soil conditions, as many growers have been led to suppose. There is, however, a very definite relationship between certain soil conditions in a field and the severity of the disease and there is also a very definite relationship between weather conditions and the spread of the disease. If the specific organism is not present, however, the disease will not appear, in spite of weather conditions favorable to the disease.

Wildfire appears first in the seed bed as very typical, small, water-soaked spots about one-eighth inch or less in diameter on the leaves. Very soon a wide, yellow border or halo appears around the dead area of the spots, giving an appearance quite similar to the well known frog-eye spot. If many spots develop on a leaf at one time, the whole leaf may take on a water soaked appearance and fall to the ground, where it very soon disappears completely. Severe infection in a seed bed may kill practically all the larger leaves, causing the plants to become gradually smaller and smaller until only the smallest leaves at the growing point remain. These small leaves generally take on a yellow or whitish appearance and the plant may die. The plants may recover if favorable growing conditions follow an attack.

If diseased plants are set in the field and favorable conditions develop for the spread of the disease, it may spread from leaf to leaf and from plant to plant and injure or destroy the entire crop.

Relation of Weather to Spread

The weather most favorable for spreading the disease is a rainy period with considerable wind, followed by a damp period of about twenty-four to forty-eight hours. The bacteria which cause the spots live in large numbers in

old spots. When these become ed with water the bacteria swim out the drops on the leaves and are then n about by the wind. This explains the disease always spreads more ly if wind accompanies rain and why s on the windward side of a field plants protected by hedges or build- even those situated in the middle rge plantings, are always freer from than those exposed to the wind.

nd is also a factor in the spread ie disease because infection takes more readily on the under side of af than on the upper. The writer letermined this point by numerous observations in which leaves were d over, exposing a portion of the side as well as the upper, in which the spots were always more abun- on the exposed under surface than ie remainder of the leaf. He also inoculations in the green house, ig the organism of either wildfire or ar leaf-spot on the lower side of alf of a leaf and on the upper side e other half. Spots always devel- in greater numbers on the half of af inoculated on the under side, few developing from the upper surface. causes the under surface to be ex- more to the windblown bacteria if all of the leaves remain quiet, as g a gentle shower.

ion of Soil Conditions to Spread

e in the season there are often small in tobacco fields in which the grow more slowly than in the re- ler of the field. Slow growth may e to lack of moisture in the "peb- soils or to much moisture in low It has been observed many times commented on by several farmers plants in these areas are more se- spotted than the surrounding more vigorous plants. Some have ided that the soil is the cause of sease in these areas, and others that plants are more susceptible than the ones. It is obvious that the soil ions cannot be the cause of the e, and we believe that the plants se areas are not more susceptible the larger plants. The more rapid l on such plants seems to be be- mechanical conditions are more able in such areas. The disease is d from the seed bed to the field, or one outbreak to another on the leaves. If the plants make a very growth so that the upper leaves ck between the rows, there is very chance of the disease which is only e lower leaves spreading to those up, whereas if the plants are all the leaves will be whipped by the wind during a storm and so ill be exposed to infection. In the part of the season the disease is likely to be found on the largest, vigorous plants because at that hey are not protected from the in- n by the leaves interlocking and arge, tender leaves naturally are about more by the wind than the leaves of the slow-growing, less us plants.

ldfire in the field, as in the seed bed, aracterized by the large, yellow spots, often one-half to three-quar- nches in diameter, surrounding a center of dead tissue. If the at- on a leaf is very severe, the whole nay become water-soaked and dry the first dry day without showing f the halo spots. This is a common ion in very severely diseased fields. black tobacco wildfire in its early shows the broad, yellow halo, but this may disappear, making it diffi- o distinguish from angular leaf-spot.

Angular Leaf-spot

gular leaf-spot, or "rust," is similar nature to wildfire but causes slight- fferent effects on the leaves. It, is caused by a specific bacterium erium angulatum).

black tobacco the angular leafspots ften much larger than on Burley o and are generally not angular. which were determined definitely angular leaf-spots have been seen were over one inch in diameter.

remarks concerning the effect of er and soil conditions on the of wildfire also apply to the angu- f-spot. It has been observed often in seed beds but has not been, in our observations, the cause of serious seed bed troubles.

Mosaic Speck-spot

Mosaic speck-spot is a disease which appears in some cases much like the angular leaf-spot, but is not due to a specific organism which can be isolated and grown. The spots appear as small, dead, brown or white spots, generally about one-eighth inch in diameter or less, and have been found only on plants which show the characteristic mottling of the mosaic disease, or "calico," sometimes incorrectly spoken of as "frenching." These spots, as far as we know, are the result of the mosaic disease. They do not yield an organism when cultured and therefore cannot be caused experimentally as can the wildfire and angular leaf-spot.

Control of Wildfire and Angular Leaf-spot

Practically every outbreak of these diseases studied in the field could be traced to seed bed infections. These, in turn, are evidently the result of seed infections. Seed-pod infections were quite common in badly diseased fields in the fall of 1920. The infected spots appeared as water-soaked areas and later as dead, brown spots on the seed pods. Seed pods were readily infected in the greenhouse by wetting them with a pure culture of the wildfire organism.

Selection of Seed from Disease-Free Fields

In view of this fact, control, it seems, must consist in obtaining disease-free seed. It is doubtful, in view of the experiences of the past season, whether selecting seed from apparently disease-free fields will be of any value as a control measure. The tobacco crop of 1919 was very free from leaf-spot troubles and from such fields most of the seed for the 1920 plantings was obtained. Seed from the 1918 crop also produced wildfire in at least one case. In spite of the fact that the 1919 crop was very free from all leaf-spot troubles, one or the other or both of these diseases were present. It seems obvious that selection of seed from what appears to be a disease-free field cannot be considered a safe means of obtaining disease-free seed.

Protection of Seed-Heads

Protection of the seed-pods from infection in fields which appear to be free from infection gives promise as a means of control. Bagging seed heads (tying a 16-pound paper bag over the seed-head as soon as the flowers begin to open) for the purpose of keeping the seed free from crossing with other less desirable plants is widely used in some sections where care is taken in the selection of desirable strains. Seeds from such bagged heads, planted at the Experiment Station the past season, produced plants remarkably free from infections. Plantings from such seed, when grown side by side with plantings from seed which was left exposed the previous season, were free from spots, whereas those from the exposed seed were spotted badly following the first severe storm. Later in the season the diseases spread to all the plots, from the infected ones. It is recommended that all seed heads be protected with paper bags and that the bags be left on until after the seed is harvested. It may be necessary to replace the bags from time to time if grasshoppers or other insects eat holes in them. The changes should be made only when the plants are perfectly dry because accidental infection may take place if the heads are handled when wet.

Seed Treatment

A seed treatment which gives promise of being of value in the control of these diseases has been developed by the Virginia Agricultural Experiment Station. It has not been widely tried under field conditions, but as it is simple, cheap, does not injure the seed, and gives promise of complete control under field conditions, it should be widely tried as a control measure.

It consists in soaking the seed in a solution of one ounce of commercial formalin (forty per cent) to one pint of

Paducah Prospects

PADUCAH, Ky., July 28.—Loose receipts during the past week have been light over the entire district, and most of the receiving stations have closed for the season. There still remains a small amount of tobacco in farmers' hands which can still be delivered, but after this week will necessitate delivering to one or two stations in the district. However stocks are practically all in and we will soon be able to make a complete report of the 1922 production in this district.

There has been considerable inquiry for lugs during the past week and a few sales of common lots have been made, but available stocks of lugs are very small. Practically all of the old stocks have been exhausted and very few h heads remain in dealers' hands. I understood that the Association has all its lugs. There have also been s inquiries for leaf and a few private s have been made, but stocks of in dealers' hands are also very light will soon be exhausted. Just what Association has sold has not been n public but I understand some sales being made regularly. We don't k the number of hogsheads or grade unsold stock in the Association at time.

The past week has been hot an most localities dry. The early gro crop is doing finely. The later smaller planting will be benefited b rain. However, taking the crop a whole it is in splendid condition

nises a large yield and much good ity. Some of the earlier plantings were topped early in July are now g suckered and with favorable ther will come to maturity by the dle of August. Topping over the rict is progressing splendidly, which . week or ten days earlier than nor-, and with the splendid prospects that have we are hoping for a large yield good quality out of the 1923 crop.

The Dark Tobacco Grower's Co-operative Association is sending out checks for per cent. of the first payment on the 2 crop, and no doubt will begin an ve campaign for new members in the r future.—W. B. KENNEDY.

bacco Exhibit at the Kentucky State Fair

EXINGTON, Ky., July 28.—The tobacshow at the Kentucky State Fair this r will be one of the most attractive tures of the big agricultural exhibit, he expectations and plans of W. Tate d, of Shelbyville, member of the State ard of Agriculture in charge of the ibit, are realized. Mr. Bird, in anncing the premiums for tobacco this r, calls attention to the great benefit the growers from the organization of Burley Tobacco Growers' Co-operative Association and the Dark Tobacco owers' Co-operative, and predicts that tobacco exhibit will be one commenate with the importance of the industry in Kentucky.

James C. Stone, president and general nager of the Burley co-operative, will the judge of the tobacco entries and growers are urged by the fair manement to compete for the premiums. ere will be classes for 1922 as well 1923 tobacco, and classes for the dark es as well as the Burley. Besides the sses exclusively for growers there will classes in which handlers are permitl to compete.

"While the State Fair has had a tocco exhibit for the past several years," r. Bird said, "it is the belief of the ir management that the tobacco growrs have not had their attention called the attractive list or premiums offered. e feel that we are fortunate in obining the services of Mr. Stone to act Judge. He is a man having the welfare of the Burley tobacco grower at heart, a man who has worked faithfully to make Burley tobacco mean what it does to Kentucky, a man who is known to have the respect and confidence of the tobacco growers and who will be careful and just in the awarding of premiums in the tobacco classes.

"Since the advent of the Burley co-operative the grower delivers his product with a confidence that is wonderful to experience. He no longer wonders and worries as to when to deliver, but delivers at his own convenience, with full assurance of justice. The grower who has exercised skill in methods of growing and handling is rewarded in direct proportion to that skill. It is the purpose of the State Fair Tobacco Show to thoroughly impress growers and farmers that methodical practice must be followed to secure a product that will grade A-1, B-1, or C-1.

"The growing of Burley tobacco has become a business now, out of which we know we shall get as much at one period of the season as at another, for the same kind of tobacco. The more we study the business the more efficient we shall become in producing those grades of tobacco that will sell well.

"We appreciate the fact that September 10, when the Fair opens, is a little early for 1923 tobacco. We want all growers to begin thinking about exhibiting now, before the time gets short. We shall also have classes for 1922 tobacco.

"It is the desire of the State Fair management and of those having in charge the tobacco show to make it a strong feature of the Fair this year."

Sales of the Burley Surplus Real Estate

LEXINGTON, Ky., July 30.—Tabulations of sales of the surplus property of the Burley Tobacco Growers' Co-operative Association last week show that $17,475 was realized for barns and lots at Mt. Sterling, Maysville, Carlisle, Flemingsburg, Augusta and Brooksville. Purchasers of the property and the price offered, which in all cases must be confirmed by the board of directors of the Burley co-operative, were as follows:

Mt. Sterling: Thompson Fertilizer Co., 1 lot, $800; C. R. Prewitt, 1 lot, $800; C. E. Duff, barn and 3 lots, $1,255;

Other surplus holdings of the association yet to be sold are at Williamstown, Ky.; Cynthiana, Ky.; Madison, Ind., and at Carrollton and Sanders, Ky. The final sale will be held at Vine Grove and Hodgeville August 7, except some Lexington lots, which will be re-advertised before the sale.

Tobacco Crop Prospects

LEXINGTON, Ky., July 28.—Estimates show a probable increase in tobacco acreage in Kentucky, including all types, dark tobacco as well as burley, of 8 per cent over last year. This means an addition of 42,000 acres. Early indications of an excessively large burley crop are not confirmed by later reports. Difficulty of obtaining labor has been a factor in holding down the crop.

In West Virginia and Tennessee burley sections, the crop has been considerably increased. The present outlook is for an increase of 15 per cent over 1922 production. Except for the increase in West Virginia and Tennessee the gain in production will not be more than 10 per cent.

It now seems probable that the 1923 crop will reach approximately 330,000,000 pounds. The weather has been favorable except in some sections where heavy rains have damaged the crop, but in all the States of the burley district, and particularly in central Kentucky, it is looking well. A considerable number of growers in the West Virginia and central Tennessee burley counties have joined the Burley Tobacco Growers Co-operative Association, but the eastern Tennessee section and probably half of the burley counties in West Virginia are outside the association and will sell over the loose leaf floors. A large number of burley growers are outside of the association in spite of the fact that its gains have been steady since its organization and includes the entire burley district, except eastern Tennessee. Total membership of the association is nearly 87,000.

The price of tobacco this fall will be lower than it was at the opening of the markets for the sale of the 1922 crop, according to estimates. Growers in the co-operative association say that the pooled crop will not be "dumped" but that it will be sold when the market is ready to receive it. The pool has its own re-driers and warehouses and can hold its tobacco indefinitely if market conditions are not at first favorable. About 38,000,000 pounds are at present being held unsold in the warehouses of the burley association.

Making Drive in Missouri for Burley Members

LEXINGTON, Ky., July 29.—Burley tobacco counties in Missouri are ready to join the movement to market tobacco co-operatively, according to William Collins, chief of the Field Service Division of the Burley Tobacco Growers' Co-operative Association, who returned to Lexington today from a trip to Missouri with Vice-President James N. Kehoe, of Maysville, who spoke to large and enthusiastic crowds of tobacco growers at Dearborn, Weston and Platte City.

A committee of fifteen, five from each of the towns mentioned, will start a sign-up campaign tomorrow, aided by ten of the best contract solicitors in the association from Kentucky, Ohio and Indiana. After a week's drive a clean-up squad of two or three men will remain in Missouri for another week signing up the growers. Mr. Collins said he was hopeful of signing up practically all the growers in the territory.

Mr. Kehoe was given a rousing reception at all three points at which he spoke, and particularly at Weston, where a loose leaf warehouse has been in operation for several years. The business men and bankers, Mr. Collins said, are backing the farmers who want to join the co-operative and a number of co-operative members, who recently moved into the Burley district of Missouri, are already on the ground and aiding in the work of signing up the Missouri growers.

Mr. Collins said that the growers seemed enthusiastic over the opportunity for better marketing conditions and that, especially at Weston, they cheered Mr. Kehoe frequently and manifested the keenest interest in the new marketing plan wherever he spoke.

Mr. Kehoe returned to his home at Maysville. He also was enthusiastic over the outlook for a big gain in membership of the association through taking in the Missouri growers.

Hopkinsville Auction Houses to Continue in Business

HOPKINSVILLE, Ky., July 30.—At a meeting last week of the Hopkinsville Tobacco Board of Trade, it was definitely decided and announced that the five loose floor houses would continue in business for the handling of the 1923 crop by the auction method, as has been done for many years past. The five houses which were in business last season, and which will continue next season, are: Thompson's Loose Floor, Hancock Warehouse Co., M. H. Tandy & Co., Butler & Perkins and the Hopkinsville Loose Floor.

During the past season these sold a little over 14,000,000 pounds, with which they are well pleased. They say they expect an increased business next fall and winter. The exact date for opening the market was not determined, but it will be about December 1. And after being started the sales will be held daily so long as the offerings warrant.

The double selling plan will again be adopted, two auctioneers being used, each buying interest being represented by two men and two sales being held simultaneously. This greatly expedites the sales, prevents congestion and is approved by both the buyers and the sellers. It has now been in vogue for several seasons.

Crop Looks Well

The growing crop through this region is in good shape and despite the reported scarcity of labor, it has been well cultivated. The acreage is variously reported, but conservative estimates give it as perhaps slightly less than last year, but fully up to what is considered a normal crop.—M. E. BACON.

Owensboro Outlook

OWENSBORO, Ky., July 28. — The weather during the week has been such as to render further improvement in the tobacco crop. Cultivation is fairly well up and there seems a general improvement in all tobaccos that had timely cultivation. Thus, I can report the crop in nearly normal condition.—J. S. PHELON.

MOST GOOD MILD CIGARS

Contain Porto Rican Tobacco

At last Porto Rican Tobacco is being accorded its proper position by Cigar Makers and Smokers alike. No longer is it necessary for the Manufacturer of a good, mild Cigar to deceive the public by advertising it as a "Mild Havana."

Numerous publicity campaigns are helping to acquaint the Smoker with the fact that an all Porto Rican Cigar or one in which the Tobacco from that Island is blended with other tobacco, makes the ideal smoke—mild yet fragrant; free-burning and rich in body but not heavy. In fact, it is claimed that a Porto Rican Cigar can be partially smoked, relighted and finished the following day with practically the same satisfaction.

The Porto Rican Government

Has established in this country a Tobacco Guarantee Agency which is conducting an intensive educational campaign to both Manufacturer and Consumer.

Cigar Manufacturers can now tell the origin of Leaf or Scraps sold as Porto Rican by examining the Guarantee Stamp affixed to every barrel or bale.

WHITE: Guarantees it to be pure Porto Rican Tobacco.
BLUE: That it is only part Porto Rican Tobacco.
PINK: That it contains no Porto Rican Tobacco.

For Antwerp, by *S. S. Carpeaka,* 166 hhds. tobacco.

For Havre, by *S. S. Warkworth,* 62 hhds. tobacco.

New Orleans News

NEW ORLEANS, La., July 28.—Charles A. Dreux, of Valloft & Dreux, has returned to the city after an absence of several weeks during part of which time he was in attendance as a delegate from Louisiana and Mississippi, at the Supreme Council of America, in Columbus, Ohio, of the Bagman of Bagdad. The meeting was well attended and the greatest enthusiasm prevailed. The order now numbers 114,000 members. From there, Mr. Dreux journeyed to French Lick Springs, Ind., where he made a brief stay. Returning homewards, Mr. Dreux visited Cincinnati, Chicago and other points en route, and while his survey of the situation from a tobacco and cigar distributor's standpoint was purely cursory, he saw enough to satisfy himself that the industry was holding its own. The Ruy Lopez, a Tampa product, which his firm distributes in this territory, is making great strides in popular favor as shown by the increased sales. The new sizes of the Dolce Far Niente, the product of Carl Upmann, Inc., of New York, retailing at 10 cents and two for a quarter, seem to have struck a popular chord.

Frank A. Gonzales' son, a pioneer in the cigar business here, has leased one of the stores in the Albin building because the Balter building, in which his stand was formerly located, is now being remodelled.

Two Favorites

H. A. Maddox, of 411 Bienville street, representing W. Duke & Sons Co.'s cigarette sales department, reports that Chesterfield and Coupons are both making great headway in this territory and that July sales will exceed that of any previous month this year.

Working Full Capacity

Manuel Trelles, leaf buyer and in charge of the manufacturing end of M. Trelles & Co., has gone to Cuba to make a survey of the leaf tobacco situation and to make purchases for his factory's Fall needs. He will be absent a couple of weeks. The factory is working at full capacity.

Making Long Swing

August Kuttnaur, broker in Connecticut leaf, has reached New Orleans on a periodical visit, after having journeyed along both the Atlantic and Pacific coasts and the Panama Canal Zone. He will go hence to Florida and from there return to his home in the Nutmeg State.

Schulte Store in Beaumont

George C. Feely, southern district sales manager of the Schulte stores, has just opened a new cigar establishment in Beaumont, Texas, the first there of these chain stores.

The Pan American Cigar Co. is now expending considerable money in billboard advertising in this city, featuring Galdos, the product of their factory.

Warehouse Gets Federal License

Federal license has been finally issued to the St. James Perique Tobacco Federal Bonded Warehouse. The Association will now begin to store the unsold balance of the 1922 Perique tobacco crop, obtaining therefor receipts to be issued under authority of the United States Warehouse Act. These receipts, in turn, may be tendered and will be accepted by the New Orleans Federal Intermediate Bank as collateral for loans to be made to the association under the Farm Credit Act. The funds thus obtained will enable the members of the association to market their crop in an orderly manner, since the term of the loans cover a period of nine months.

Carried the News Far and Wide

The announcement, which first appeared in the columns of TOBACCO, making public the fact that the Perique tobacco growers of St. James Parish had formed a co-operative association for the marketing of the Perique tobacco crop, followed by display advertisements announcing the creation of a new sales department, domiciled in New Orleans, with Sigur Martin as its executive head, has been productive of very satisfactory results, as is attested by the inquiries which have come here from all over the country and Europe, making requests for samples of the crop and such other particulars as

Pennsylvania Market Practically Bare of Leaf

Only Small Quantities of Independent Tobacco Available—Co-operatives Sell Some Holdings—Prices Not Made Public—Timely Rains Help Growing Crop.

LANCASTER, Pa., July 30.—Operations on the Lancaster market are rapidly approaching a point where they must come to a standstill through actual lack of goods for the buyers to purchase. Steady sales, though in no large quantities, are draining the supply of seedleaf still in the hands of the packers, and every week sees an appreciable decrease in both 1921 and 1922 tobacco. The stock of 1921 is reduced to a small supply of low grade, and the 1922 still on hand consists of practically the same.

Among a number of small sales of low grade Pennsylvania of both the 1921 and 1922 crops the sale of a considerable quantity of cigar leaf by the Mt. Joy Farm Products Co. is prominent. This is the first of the co-operative tobacco packing concerns to have sold a portion of their holdings which were reputed to be of very good quality. The sale consisted of several thousand cases and forms a considerable part of this company's 1922 packing.

Co-ops Had Handicaps

It would be very interesting to know the price paid for this co-operatively handled tobacco, since therein lies another chapter in the history of the Lancaster County grower's efforts to market his crop through his own agency. Last year, under the impetus of low prices and general dissatisfaction with existing conditions, a comparatively large number of growers availed themselves of the co-operative plan of packing, and the four companies handling the 1921 goods packed a considerable quantity. High prices at the start of the buying season last fall, however, made the operation of the co-operative concerns more difficult. One of them, situated at Ephrata, was forced to close for the season, due to the lack of a sufficient number of signers. The warehouses located at Mt. Joy and Lititz handled some cigar leaf, but less than the year before, and the Mountville "co-ops" packed an increase over their 1921 operations.

Put Faith in Co-operatives

With tobacco selling at from 16 to 22 cents a pound, it was a much-debated question among the farmers of the county as to whether the co-operative houses would work to the good or to the ill of the grower. Most of them put their faith in the buyers' contract, which carried with it the immediate assurance of realizing a fairly good return on their crop, rather than risk a season's work on the fluctuations of the market. It was confidently predicted by the growers who held their tobacco with the co-operatives that their venture would prove as successful as it was the year before.

The price received by the Mt. Joy Farm Products Co. for their tobacco last week is, of course, the answer to the question of whether the co-operatives can work to the growers' advantage through prosperous seasons as in the lean years. The terms of the transaction have not been made public, but they will undoubtedly have a great influence on the success of the co-operatives in handling the 1923 crop. It was openly stated last year that one of the indirect, but very compelling, causes for the high prices paid to grocers was the desire to keep the Lancaster market open, and to prevent the co-operative movement from gaining firm hold among the county growers. If this was actually the case, the palm must go to the clique of buyers who planned this strategy, for it is a fact that it was only by strenuous efforts on the part of the leaders in the co-operative movement that these warehouses kept their heads above water and were able to do business.

Bayuk Was the Buyer

The owners of the tobacco which was sold through the Mt. Joy house were Elmert Strickler, Gabriel Moyer and Harry Garber. Bayuk Cigars, Inc., was the purchaser, and it is reported that its activities will not stop with these transactions, but that more cigar leaf will be bought by this concern in the near future.

Weather Becomes More Favorable

The dry spell which has persisted for some time in Lancaster County came to an end last week just in the nick of time. There was considerable moisture in the ground when the plants were set, a fortunate circumstance which alleviated to a great extent the following period of dryness. The drouth condition did not last long enough nor was of serious enough proportion to harm the crop or to give the "woody" constituency to the leaf which marks "dry weather" tobacco. Since the three-day period of soaking rains the seed leaf has improved 100 per cent., and is on the way to a bumper crop of good quality Pennsylvania which will, barring further impediments such as cold weather or hail, surpass the excellent cigar leaf of the 1922 crop. August is the tobacco month, and the deciding factors occur then. If favorable conditions prevail during this period, growers may expect a good crop regardless of previous or following circumstances.—KEYSTONE.

York County Expects Good Tobacco Crop

YORK, Pa., Aug. 29.—With good weather conditions the next 30 days, according to a number of crop experts, York county will this year produce a bumper crop of tobacco. In some of the tobacco districts of Pennsylvania, because of drouth the crop is growing slowly, but the dry spell has not had any serious effect on the York county crop. The rain which came Saturday and continued all day was timely and will prove beneficial. The plants are all "well set" and are in a thriving condition.

There will probably be a big demand for tobacco this year, as all of last year's crop is cleaned up, it is claimed.

Becomes Salesman

Charles F. Spielman, a foreman for many years for Clarence F. Gable, who recently discontinued his factory here, has taken a position with Samuel L. Etter & Son, 129 North George street, as the sales representative for York and Adams counties. Spielman, who has been connected with the cigar business in one capacity or another for the past 31 years, is one of the best known men connected with the industry. With the Etters, he will specialize in the sale of the Aristocrat, manufactured by C. E. Bair & Sons at their factories in Goldsboro, Strinestown, Craley, Wrightsville, East Prospect, and Yorkana. In addition, he will handle the El Poderso, the El Verso, and other popular brands.

The employes of the Beltz cigar factory, Yorkana, held an outing Friday at Schwenksville, the home of their employer. They made the trip by automobiles.

The employes of the Super Five cigar factory, Red Lion, held an outing on July 25, along the Susquehanna river, near Long Level. A luncheon was

served on the banks of the river and the outing was a most enjoyable one.

Stoner Creditors to Meet

A meeting of the creditors of Edward B. Stoner, the brankrupt Hallam tobacco manufacturer, who disappeared last December but is now reported to be in California, has been called by the referee in bankruptcy for York county to authorize the trustee, Charles M. Strickler, to sell the real estate at public sale. The meeting will be held August 7. The date of the sale has already been fixed for August 16 and 17, at 1 p. m., on each day. The auction will be conducted on the premises to be sold. The value of the real estate of the bankrupt is appraised at $62,600.

Prices Are Problematical

With the approach of the tobacco marketing season, interest now centers on just what price will be obtained and this is always an unknown factor, with only a few things available to base any price figures on. Unlike cotton which has a year-round market and exact price figures on each of the few grades, the price to be paid for tobacco is only known after the markets open and the few big firms which take the crop have made known their figures by the bidding of their buyers.

Conservative estimates place the crop of the bright belt slightly lower than last year and predict only an average production while the government figures for the entire tobacco crop for the nation overtop any previous crop figures, but the fact is that the tobacco grown in the bright belt is a distinctive type and a glutted market of the other types has comparatively little influence on the bright tobacco market.

The prices now being paid for tobacco in the Middle West and other places, where buying of last year's crop is going on, are holding firm at about the same figures of six months ago. Tobacco consumption all over the world is on the increase and our export business is good and there is nothing to warrant any big drop in prices of bright tobacco from the closing figures of last season, which were good. Auction markets in this section will open August 23.—*LaGrange (N. C.) Lenorean.*

May Try Growing in New Section

WADESBORO, N. C., July 28.—The success gained by several years' experimental growing of bright leaf tobacco on the numerous soil types prevalent in Anson County, have determined the Wadesboro Chamber of Commerce to encourage the coming of experienced tobacco growers, either as tenants or by purchase of suitable farm lands.

Already between eighty and one hundred prominent land owners of this county have signified their readiness to co-operate with the chamber of commerce in remiting or selling parcels of land for tobacco growing on advantageous terms. Heretofore the farmers of Anson County have striven only for high-grade cotton, the excellence of the breed of which has gained a nationwide reputation. And now since it has been conclusively proven by experiments that tobacco of the highest quality can be grown here, the chamber of commerce has undertaken to place experienced tobacco growers on suitable farms throughout the county to foster crop diversification.

Secretary C. H. Van Herine, who has the matter in charge, states that farm homes, tobacco barns and other adjuncts to successful tobacco growing will be provided and farms may be purchased on the building and loan plan on long-time credits. In fact, the organization is ready to assist in the financing of the sale of farm lands in order to locate a sufficient number of tobacco growers in the county.

In the West

Henry Nathan, of E. Rosenwald & Bro., is looking up his clients in the Western territory.

Philadelphia Business Making Usual Progress

Cigar Manufacturers Keeping Up Production to Meet Future Contingencies—Live Retailers Getting Fair Amount of Trade—Leaf Traffic Compares Well With Year Ago.

PHILADELPHIA, July 31.—As July closes and the last of the mid-summer months is about to open, conditions in the manufacturing trade generally show a slight improvement over the previous weeks, although in the retail trade the fall-off in both counter and box trade is very decided. During the week there came to some of the medium size and smaller manufacturers the first inquiries experienced in a fortnight or more. Orders still are decidedly shy but there is confidence that they will come along in due course. The big producers are not easing off on their sales campaigns despite the fact that they are sold well ahead, for the reason that good business policy suggests to them that they constantly keep extending the area of their sales in order to have a foundation of security even under adverse circumstances. There are none now, however, who look forward with any concern to the near future.

Typical Summer Leaf Trade

Almost typical mid-summer conditions continue to prevail in the leaf trade, and the record of this year compared quite favorably with the corresponding period of last year.

Box makers are much more active at this ending of July than they were when the month began, the increase being divided between the requirements of the manufacturers for their staple business and through anticipation of an exceedingly active fall business.

Retailers enterprising enough to make appealing presentation of their wares to prospective tourists are reaping a good return on their expenditures. The conservative dealers with a standby patronage also are doing fairly well, but among the class which simply waits for customers to stroll in, there is much complaint over small transient buying and over limited or entirely absent box business. However, among even the latter confidence in complete recovery with Labor Day, is general.

The last of the obstacles which delayed removal of the executive offices of the Congress Cigar Co., from the old headquarters, to the newly constructed and massive reinforced concrete and brick home at 3rd and Spruce streets, disappeared and now the executives are comfortably installed in most luxurious offices—probably the costliest in any cigar factory in the United States. Factory forces were ensconced in the new home several weeks ago.

Old Concern Going Into New Home

Perhaps the oldest cigar and smoking tobacco business in continuous existence in this city, that of John Middleton, shortly is to remove to a new home. The store occupied by this concern, at 219 Walnut street is a landmark in Philadelphia. Here business was conducted by the present owner and his father from 1856 on. It is, therefore, almost as old as the Consolidated Philadelphia, the present municipality having been established in 1854, by the union of a score of townships, boroughs and districts. Business was conducted in what many look upon as an old fashioned way; a large patronage having been developed among financiers and brokers in this neighborhood which, for decades, was the financial center of the city. The new home to be occupied in a short time is at 1211 Walnut street, in the very heart of the city's most fashionable and exclusive shopping center and only a stone's throw away from the new home of the stock exchange.

Through the activities of the Philadelphia Association of Credit Men, in which there is rapidly growing representation of the cigar industry, a worthless check given to the ..... Cigar Co. was made good by the man who issued it, but only after an arrest. While the amount involved was but $40, the principle is regarded as important and the case may be a warning as well as a safeguard to others. The association secured a warrant for the arrest of a small dealer who disappeared. He was traced to Coatsville and then back again to this city where the warrant was served. Taken before magistrate Scott, that official discharged the man after he produced payment in full.

The cut rate establishment opened only a few weeks ago at 105 S. 8th street was closed last week and the premises are now for rent.

A first born, during the week, entered the family of Ralph Dietz, manager of the A. Schulte Store at the Southeast corner of 13th and Chestnut streets. Mr., Mrs. and Miss Dietz are receiving congratulations.

Going Full Force

The new size, the Invincible, of the 44 brand, is being featured by the 44 Sales Corporation, of this city, an affiliated organization of the Consolidated Cigar Corp., 11th and Washington avenue, under the personal supervision of the sales manager, Louis Levinson. A particularly effective placard—a full size smoker enjoying the Invincible size and fragrance is being shown at the head of the main stairway in the Reading Terminal, on the Reading R. R. ferry boats and elsewhere. The new shape is a long filler made of high grade tobacco. Headquarters in the city during the week enjoyed a visit from Eugene Klein, general manager. Particularly large orders for Dutch Master, Henry George, as well as 44, are coming from the far West. All the local factories are running full time.

K. Straus & Co., Third and Vine streets, are receiving shipments of extra fancy, light Sumatra leaf and they are going out almost as fast as received, because of attractive prices. George Cauffman, vice-president of the firm, has just returned from a leaf selling trip to New York City and state, and instead of going to Atlantic City will this week leave for an extended trip to Connecticut where he expects to buy shade grown tobacco and will visit the factory patronage in the territory. Herbert Rheinstrom, just returned from the South, leaves again shortly for a trip through New York State.

Prepared to Make More Cigar Boxes

With recently installed equipment, among others a Francis X. Hooper Co. press, made by the Hooper Co., of Glenarm, Md., and other units for box making and label pasting, the Monroe Jarrett Sons' Co., Randolph and Jefferson streets, is prepared for fall activities with double capacity as against the year's beginning. Many manufacturers are taking the firm's advice to place orders at once in order to avoid possible delay from congestion in the rush times of early fall.

A Visit to Dixie

Benjamin L. Grabosky, of the G. H. P. Cigar Co., Third and Brown streets, accompanied by sales manager Frank P. Will, spent the week in Richmond, Va., looking after the interest in the Southern field for El Producto.

Pleased with Big Business

Benjamin Lichty, president of Otto Eisenlohr & Bros., 932 Market street, has returned from the Middle West. They have a big business throughout all the territory for Cincos and Henriettas. All the factories of the Eisenlohr string are working full capacity.

Leo S. Weiss, of the Roig & Langsdorf Co., makers of Girards, 15 N. Seventh street, is expected to return this week from his Western trip of two weeks.

Because of large business in Lancaster leaf, the capacity of the warehouse at 134 N. Christian street, Lancaster, Pa., of S. Weinberg, 121 N. Third street, Philadelphia, is being taxed. From the

Lititz packing house more than 1,000 cases have been shipped. Louis Weinberg and Frank J. Rubinstein are in charge of the Lancaster plant, and kept busy meeting the demands for the Pennsylvania leaf. Maurice Craine is representing the firm among the up-state factories.

Charles M. Hipple, of Hipple Bros., Inc., is on an auto tour with his family, taking in the New England states.

Visitors to the local leaf market included Herbert J. Curtis, of Arthur Bornholdt Co., New York; Ray S. Clark and D. Dreux, of D. Dreux, Inc.; John F. Nissly, of Lancaster, and S. Levine, of Lancaster.

A Million Dollars a Week for Chewing Gum

The people of the United States pay more than a million dollars a week for their chewing gum. And the "habit" is apparently a growing one, for the value turned out by the factories of the United States in the latest census year, 1921, is more than double that of the pre-war year, 1914, the first year in which the government dignified the industry by official statements of the amount turned out by the factories of the country.

This assertion that the people of the United States now pay more than a million dollars a week for their chewing gum is based upon statements of the factory outturn of this particular industry compiled for the *Trade Record* of the National City Bank of New York. It shows that the value at the factory of the chewing gum produced in the United States in 1921, the latest census year, was 38½ million dollars, to which may be added about 2½ million dollars as a by-product of certain other factories, making the factory value of the total outturn in 1921 about 41 million dollars, while of course the additional sums paid by the final purchaser would bring the total sum paid by the consumers considerably above an average of one million dollars a week.

It seems that the "habit" has proved contagious as relates to other countries, for our exports of chewing gum show as large a percentage of increase as do those of factory production. Whether it was the example set by the American soldiers who found it a convenient companion in their long marches, it is at least a fact that the world demand began shortly after the opening of the war and grew very rapidly, since official statistics of exports, which only began with the year 1916, show an advance from less than 1 million dollars in 1916 to 2½ millions in 1920, while the value of the exports in 1923, though materially less than in 1920, are 40% greater than in 1922.

Where does it go—these millions of dollars' worth of this product now being sent out of the country? To practically every country of the world. Figures prepared for the *Trade Record* show that the exports of chewing gum in 1920 went to no less than 75 countries and colonies scattered the world over. To dignified England the total exports of 1920 were approximately a million dollars, measured at the wholesale price at the port from which exported, and in 1918 the exports to Great Britain were $1,120,000. France took in 1920 $383,000 worth. and other European countries in proportionate quantities, though to Germany the exports was comparatively small, only $260 worth. That it is equally popular in the other side of the globe is evidenced by the fact that our total exports to Asia and Oceania amounted to nearly a half million dollars in value, including $288,000 worth to the Philippines, $75,000 to Japan, $42,000 to Australia, and $14,000 to India. South America also developed the habit and the total to that continent in 1920 was $275,000, while the sales in Africa were also large.

That the habit has "come to stay" seems to be an accepted view by that very high authority—capital, for nothing is so wary as capital in forecasting the future demand of a manufacturing industry. And when we find, says the *Trade Record,* that the amount of capital invested in the chewing gum industry as stated by the census reports was in 1919 $23,000,000 against only $10,000,000 in 1914, it would appear that those studying the manufacturing industries from the standpoint of the investor have confidence in the future world demand for this article of which the United States is apparently the chief producer, since official records of the government fail to show any importations of this class of merchandise.

Baltimore Market

BALTIMORE, Md., July 26.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND.—With receipts totaling 1,101 hogsheads, and sales of 999 hogsheads, our market ruled very active. Price for the top grade also advanced to 53c.

The offerings now contain a good proportion of fine tobacco, and indicate what may be expected for the next 3 months.

OHIO.—Receipts 49 hogsheads and sales 75 hogsheads. Prices for the new crop are now fairly well established.

Crop Prospects

MARYLAND.—Had good rain this week, prospects are for an excellent crop.

Association Data

The Leaf Tobacco Association of Baltimore City, issues these statistics for the week ending July 25:

of Pacific Coast smokers in stabilized Manila brands.

* * *

The B. Wasserman Co., importers, of 77 Chambers street, New York, are making satisfactory progress in the distribution of the Alhambra cigar, well known as one of the finest products of the Philippine Islands.

Prices of this popular brand are quoted to the trade as follows: Alhambra Excellentes, retailing at two for 25 cents, in boxes of 25, $95 per thousand; Alhambra Superbs, retailing at two for 25 cents, in boxes of 25, $95 per thousand; Alhambra Especiales, retailing at 10 cents straight, in boxes of 50, $75 per thousand; Alhambra Presidente, retailing at two for 15 cents, in boxes of 50, $58 per thousand; Alhambra Vegueros, retailing at five cents, in boxes of 50, $35 per thousand, and Alhambra Royales, retailing at five cents, in boxes of 50, $35 per thousand.

Going to Sunny Spain

Celestino Ejusquiza, Havana partner of Selgas & Co., arrived in New York from Havana yesterday on the S. S. *Orizaba*. He plans to sail for Spain on August 7.

Leaf Tobacco Held by Manufacturers and Dealers

July, 1923 and 1922, April 1, and January 1, 1923

WASHINGTON, D. C., 10 A. M., July 31.—These statistics represent for dealers in and manufacturers of tobacco other than the original growers: (1) The quantity of leaf tobacco reported as held by manufacturers who, according to the returns of the Commissioner of Internal Revenue, manufactured during the preceding calendar year more than 50,000 pounds of tobacco, 250,000 cigars, or 1,000,000 cigarettes, and by dealers in or manufacturers of leaf tobacco who, on an average, had more than 50,000 pounds of leaf tobacco in stock at the end of the four quarters of the preceding calendar year; (2) all imported leaf tobacco in United States bonded warehouses and bonded manufacturing warehouses. Report by Department of Commerce, Bureau of the Census:

*Leaf tobacco on hand July 1, 1923, includes 1,271,068,249 pounds, for which the "Marked Weight" was reported (i. e., weight at time it was packed or baled), and 426,776,196 pounds for which the "Actual Weight" was reported. The corresponding amounts included for 1922, were 1,241,318,927 and 375,077,210 pounds, respectively; for April 1, 1923, 1,401,994,826 and 444,560,219 pounds, respectively, and for Jan. 1, 1923, 1,119,322,365 and 371,978,623 pounds, respectively. Allowance should be made for shrinkage on the amounts for which "Marked Weight" was reported, in order to ascertain the actual weight. The total for July 1, 1923, includes 1,547,994,559 pounds of unstemmed and 149,849,886 pounds of stemmed leaf tobacco.

Wisconsin

(*Continued from page* 3)

sold their tobacco in the recent buying spell. It is impossible to state anything concerning the authenticity of these reports but things point to more litigation for the co-op again next Winter.

"In the Spot Light"

The national scope of the co-operative movement is well exemplified in the political news of the month. Harding's placing of a co-operative plank in the Republican platform is perhaps the most striking single instance. The election of the roaring Magnus in Minnesota is also taken by the mob to mean another co-operative fan has stepped into the political spotlight. To the keen analyst, however, there is a puzzling complex to the situation at present. Co-operation is not boomed out as raucously and boldly by the leaders of the farm bloc as an economic cure-all as formerly. In their angling for farmer votes, freight rates, guaranteed prices, flexible credits and appropriate storehouses are now also being stressed. Perhaps the word pool is not as welcome a word to many of their constituents as formerly. If so, no one is more aware of it than those keen politicians. It might be possible that the collapse of the Non-Partisan league, of several wheat pools, of the enormous and top heavy milk pool, and others might have made the word pool anathema to many former enthusiasts and made the "loud and common" talkers more cautious. It might be that they see an approaching schism concerning the pool within their farmer ranks. Others point out the factor of personal equation that almost wrecked the most powerful of all pools—the raisin growers' pool. When prices got so high, it seems the growers all had a most remarkable and a most sagacious idea. They secretly made up their minds, each and every one, that they would raise more raisins, with the result their market had an immediate and acute attack of indigestion. One trouble with the pool ideal, like so many other ideals, is that it takes the discipline of a German army to keep it effective. American farmers are not exactly the easiest crowd in the world, at least inherently, to discipline.

Take Your Choice

Perhaps these reasons may explain a lot. Perhaps they are excellent. Perhaps they are the bunk. Let the reader place his own estimate upon them. But surely, in no section, or in any commodity, are the co-operatives having exactly the smoothest kind of sailing.

There is no gainsaying the fact that the farmer's burdens are almost intolerable. He makes one turnover a year, only. He is perched, high and dry, on deflated, but still high-priced land. To live he must produce a national surplus. To market that surplus he has only a war-wracked and bankrupt universe to sell it to, with impossible mediums of exchange. What to do? No one knows, he perhaps the least of all. But he is sick and tired of old-line politicians, and their promises, and has washed his hands of them. That much he knows, and hence the "dirt farmer" statesman is evidently here to stay. The universe has been rocked a good deal of late, he has made up his mind to rock it once or twice himself, if he can. It might do some good. It certainly would not do it any more harm, as far as his own lot is concerned.—BADGER.

New Orleans

(*Continued from page* 35)

the association is more than gladly disposed to give all enquirers. Five large bags of Perique tobacco were shipped during the current week to Montreal, Canada, for enquirers in the Canadian territory, where a growing demand appears to exist for the product of the St. James Parish Perique tobacco belt.—CRESCENT.

Leaf Diseases

(*Continued from page* 29)

water, or in the proportion of one to sixteen. The seed should be stirred constantly in this solution for fifteen minutes, washed thoroughly in several changes of clean water and dried in a place entirely free from tobacco dust and litter. As formalin sometimes causes injury to seeds, washing should be thorough, especially when the seed is not to be planted immediately.

Bichloride of mercury or corrosive sublimate may be substituted for the formalin, using one part of bichloride to 1,000 parts of water. The seed should be soaked in this solution for fifteen minutes and washed thoroughly. The seed may be dried quickly if they are put into a small cheesecloth bag and swung around at arm's length several times to remove surplus water and then spread in a thin layer.

It is important that seed be treated even though it has been obtained from a field which seemed to be free from disease the previous year.

Other Precautions

Care should be taken to prevent infection from other sources. It is necessary that new canvas or canvas which has been boiled in water or soaked in formaldehyde solution be used because there is a possibility of infection being carried from one season to another on dirty canvas. It is desirable that steaming be substituted for burning beds, because it kills weeds more thoroughly than burning. If a small, infected area is present in a bed and weeding is done the disease may be spread over the entire bed on the hands of the weeder. If weeding is not necessary the infected area may remain small and be avoided entirely at planting time.

Fla.-Ga. Wrappers

(*Continued from page* 21)

selling more cigars than are now being sold.

"The cigar trade can profitably study the evolution of the cigarette business. It was not so many years ago that the Turkish cigarette was THE cigarette. A few clever men put their heads together with the result that the bright tobaccos of the Atlantic seaboard and burley tobacco now dominate the cigarette field. Moreover, the cigarette smoker is better satisfied. There is food for thought in this for the manufacturer of the seed cigar. It can be done just as easily as it was done in the cigarette industry, and the evolution will be just as natural. Florida wrappers blend perfectly with any carefully selected bunch combination. The wise manufacturer is experimenting with Floridas, and many successful manufacturers are using Floridas.

"The taste of the Florida crop is pleasant, sweet and oily in the heavier grades. Bitterness is absent in the thinner leaves, which are neutral.

"The Florida crop has body, texture and grain. It works well on the table because it possesses all of the desirable characteristics that a good wrapper should have. There is some thin tobacco, but it has the body to spread. Its table yield has long been recognized as one of the very best yielding wrapper tobaccos, and it is not uncommon for manufacturers to wrap a thousand cigars at a cost of four to five dollars a thousand. Compare this with a wrapper cost of two or three times that and it behooves all manufacturers to pay more attention to this American industry."

Chicago

(*Continued from page* 9)

Grant of the Wm. J. Seidenberg Corp., Chicago sales force, opened 178 new accounts on Pancho-Arango and Virginia Lee cigars. Although in business only a year next month, the Chicago branch of the Wm. J. Seidenberg Corp. of New York, has on its ledgers 3,246 accounts. They cover seven states in this territory. The branch is becoming a big factor in the cigar business in Chicago and the middle west. The Cooper-Carleton Hotel, one of the finest on the South Side, has stocked several sizes of Pancho-Arango made in Bond cigars.—H. L. H.

To Cover Keystone State

Leopold Holzman, of Strouse & Holzman, is scheduled to cover the Pennsylvania territory next week in the interest of his organization.

TOBACCO

A WEEKLY TRADE REVIEW

ESTABLISHED 1886

Vol. LXXVI. No. 15 NEW YORK, AUGUST 9, 1923 Per Annum, $3.00 Per Copy, 10 Cents

Wisconsin Growing Conditions Continue Good

Northern Prospects Excellent and Southern Outlook Bright—Some Areas Need Rain Badly—Pool Starts Another Membership Drive—Poor Response at Inaugural Meeting.

EDGERTON, Wis., Aug. 4.—Trade activity is dull and seasonal. The warehouses have finished their season's run, with the exception of E. M. Hubbell & Sons, and the lull before sampling time is only too apparent. There is nothing much to do now but wait till the weed is ready in the field, or ready to sample in the case.

There are practically no unsold old binders on the market. Six hundred cases would be ample to cover every case of unsold binders of old tobacco left in the case, in the state. There are persistent inquiries for this, but their ideas of price, and of terms are too widely divergent to date.

Buyers Selecting Localities

Much riding is being done in all the growing sections. Buyers are out picking their localities, and giving crops that catch their eyes a once over. There has been no buying done the past week, but it looks as though it might break in the North any minute.

In the South, there are rumors of offers in the scattered patches where there was hail. Offers of ten cents were unanimously turned down by the growers for stormed tobacco. It looks like a bargain at that price, at that.

Growing conditions continue to be excellent in the north. There are a few areas that need rain, but the northern crop will be a good one this year. Last year the month of August saw hundreds of acres hailed there badly. It is to be hoped that this will not happen to the binder crops this year.

Spotted Condition of Crop

In the south, good growing weather continues. The often discussed spotted condition of the crop this year continues also. There are areas in the south, also, where rain is badly needed today. Our well advertised friend, Wildfire, remains conspicuous by its absence. There are complaints of root rot, and of wire worms already voiced by many growers.

Position of the Pool

The pool is nearing the end on their assorting, and their warehouses will be closed as they get through. Just what per cent of carry over the pool has, it is hard to determine. But it looks as though they might have to borrow on their '23 to make the final payment on the '22. The farmers' pools working prior to the formation of the big one, have a few scattered hundred cases of '18, '19 and '20 still unsold.

Should these carryovers remain unsold, it seems the pool will have to Ponzi-ize along between the War Finance Corporation and the local banks much the same manner that some of the southern pools are. Only the Wisconsin pool is not zooming down the path of destruction like some others are. It is still solvent.

Olaf Jenson, assistant office manager of the pool, has resigned his position. He will go into other lines of business.

Northern Buying Movement Quiet

The buying movement in the north has seemingly stayed quiet for still another week. There were rumors of Bekkedal offering a price on one or two lots, but nothing authoritative.

The pool has started still another membership drive. At the big rally meeting that inaugurated this last particular "drive" held at Cottage Grove, there was a big attendance, but not a solitary signer. And so it goes, try as they do, it seems that the pool is destined to swing into the '23 selling season with only about half of the '23 crop pledged, with a carryover of unsold southern, and the recipient of many a '22 grower's, "Well, I will gif de pool one more chance."—BADGER.

Fall Inscription Schedule

AMSTERDAM, Holland, Aug. 1.—According to an official statement, the importers still have on hand of the running crop: 22,684 bales of Sumatra. The dates of the autumn Sumatra inscriptions have been fixed as follows:

Amsterdam, Oct. 5 and 12.

Rotterdam, Sept. 28.

The Java concluding inscriptions will be held on the following dates:

Amsterdam, Sept. 21, Oct. 19, Nov. 16, Dec. 14.

Rotterdam, Sept. 28, Oct. 26, Dec. 7.

Tobacco at Florida Fairs

PENSACOLA, Fla., Aug. 4.—Gadsen county has a chance to send an exhibit to the South Florida Fair to be held at Tampa January 31 to February 8. P. T. Streider, general manager of the fair, was here last week and urged the citizens to have an exhibit. Gadsden county will send an exhibit to the Jacksonville fair and this will probably be sent from that city to Tampa.

Fifteen members of the Florida and Georgia Tobacco Growers' Association met here recently to discuss problems of the industry in this county. The main topic was the control of diseases of tobacco and Dr. W. B. Tisdale stated that he has conducted experiments that will be practicable in combating diseases.

Harvesting at Kinston

KINSTON, N. C., Aug. 4.—Tobacco is "buttoning" everywhere in this part of the "new belt." Final harvesting on some farms will be in progress during the next ten days. Already millions of pounds of the current crop, graded and cured, are stored in pack houses awaiting the market's opening three weeks hence. By Aug. 15 the great bulk of the 1923 production, 25,000,000 pounds in the Kinston market's territory, will have been cured and made ready for the sales. Growers throughout the district are benefiting from the early harvesting.

The local "factories," a number of large redrying and packing plants included, will give employment to hundreds of laborers during the six months after the market's opening. A reported heavy demand abroad for bright leaf tobacco will result in a large part of the local crop being exported to London, Hamburg and other foreign centers, it is expected.

Georgia Tobacco Prices High

VALDOSTA, Ga., Aug. 2.—Tobacco markets at Nashville and Hahira, Ga., opened today with better prices than have been known in past seasons. Reports from Hahira stated there were 150,000 pounds of tobacco on the floor and 150,000 pounds in adjoining warehouses. At Nashville it was said there were 175,000 on the two warehouses. Prices ranged from 45 cents down to 15 cents a pound.

P. & T. Incorporate

DOVER, Del., Aug. 4.—Park & Tilford, Wilmington, has been incorporated, to conduct a chain of stores with a capital stock of $20,000,000.

Connecticut Buying Rules High

EAST HARTFORD, Conn., Aug. 6.—General rains throughout the New England tobacco belt have gladdened the hearts of the growers. The storm of July 24 added a couple of million dollars to the value of the crop and brought a broad smile across the countenances of the thousands of tobacco growers who thronged Riverside Park for the first annual field day of the association—the largest gathering of its kind ever held in New England. The dry spell had begun to pinch the tobacco, but today the crop has improved so much as to give promise of being the best crop in years.

General Buying Movement

During the past week there has been a general buying movement of the non-pool tobacco both in Massachusetts and Connecticut. Recognizing the fact that the 1923 crop has every indication of being a banner one, the leaf dealers have invaded the tobacco belt and purchased practically all the Havana seed of the non-pool growers in Massachusetts at prices ranging from 43 cents to 50 cents in the bundle, and in the Connecticut Valley section of Connecticut for 46 cents to 50 cents. A large part of the Broadleaf raised by independent growers in Connecticut has also changed hands, ranging in price from 50 cents to 60 cents in the bundle.

In the Housatonic Valley section of Connecticut dealers have been busy engaging the crops of non-poolers, but to date no actual price contracts have been made. The prices made are especially high, even above the war level and spell prosperity for New England tobacco growers, provided the crop turns out in accordance with expectations. Members of the association are pleased with the good market for non-pooled tobacco, as they realize that it spells a good price for them later on.

Open Account Loans Effected

President J. W. Alsop is meeting with his usual success in negotiating the large open account loans with banks in the tobacco belt. Each institution visited so

An East Hartford Field of Broadleaf Raised by Paul Kasche, the Harvesting of Which Began July 26

Manufacturers buying

Sumatra or Java Tobacco

without looking over our line, do themselves an injustice.

Our stock comprises such enormous quantities and of such varied selections, that we are bound to suit the most fastidious buyer.

Our purchases of the 1922 crop of Sumatra are upward of 10,000 bales.

H. DUYS & CO., Inc.

142 WATER STREET NEW YORK

American Headquarters for Sumatra and Java Tobaccos

far has agreed to extend credits varying according to lending ability all the way from five thousand to four hundred and fifty thousand dollars. With ample funds at the disposal of the association, without the necessity of actually pledging warehouse receipts for each case of tobacco, the pool will be in a position to make the first payment on the 1923 crop just as soon as the tobacco is packed and classified. A check will be mailed the member for his first payment along with the packing report. This is possible only because of the splendid way in which the pool established its credit as a result of the first year's operations.

Hail Insurance Popular

In addition to placing nearly $5,000,000 of hail insurance on the members' crops, at less than 50 per cent of the previous rate for such protection, the association has now made arrangements with the syndicate of insurance companies carrying the fire insurance on association tobacco to extend the terms of this policy to furnish full coverage on members' tobacco from the time it is hung in the curing barns to the delivery of the crop to the pool. In case of loss, payment will be made through the association for full value as determined by the association and insurance adjusters. Premiums will be paid by the association and made part of the general overhead charges on the 1923 crop.

Figured on the estimated average value of the crop, the cost to the members will be approximately $1 per acre for each three months' period the tobacco remains in the members' possession. The coverage is automatically effective as soon as the crop is harvested. The placing of fire insurance in this way will mean a tremendous saving to the growers.—L. P. M. HICKEY.

Young Cal Coolidge a Chip of the Old Block

The family of our new President has ever been noted for the assiduous manner in which they perform the duties allotted to them. Upon the tobacco farm of Dickinson & Day, at Hatfield, Mass., Calvin Coolidge, Jr., 14-year-old son of the President of the United States, is daily sweating away under the heat of the broiling summer sun as he bundles up tobacco leaves and places them on laths to dry in the sheds. Khaki trousers, worn shoes and a collarless shirt are the clothes worn by the Coolidge heir, who is taciturn and silent like his father, and shuns the idea of publicity.

He is a slender, blue eyed youth of a very athletic and active disposition. A few days ago he and his chum Edward

International Newsreel Photo

Calvin Coolidge, Jr., at Work on Dickinson & Day's Tobacco Farm

Baker, of Northampton, went to the big tobacco farm and asked the manager for a job, saying that they wanted to work for the rest of the school vacation to earn some pocket money and also to develop their muscles.

The manager gave them work in the fields and sheds at the rate of $3.50 a day for nine hours' work. Mr. Day and Mr. Dickinson were unaware that they had hired a son of Calvin Coolidge, as they did not ask the boy's first name and Mr. Day was astounded to learn that the son of the President was on his payroll.

Both young Coolidge and young Baker live in Northampton and get up at daybreak each morning, partake of a hasty breakfast at their homes, meet at a specially designated point and then ride together on their bicycles eight miles to the farm. They carry their luncheon with them in tin dinner pails and return home at 7 o'clock in the evening.

Tobacco Shed Fire

SIMSBURY, Conn., Aug. 4.—About fifty neighbors and nearby residents fought a fire in the 300-foot tobacco shed of A. T. Pattison in the Terry Plain district, but were unable to check the flames and the tobacco stored in the shed was destroyed with the building. The loss, which was covered by insurance, amounted to $30,000.

The burned crop was second primed Cuban shade grown tobacco. The cause of the fire has not been established. Two watchmen were in the building at the time.

Banner Simsbury Crop

SIMSBURY, Conn., Aug. 4.—Harvesting the shade-grown tobacco is now in full swing. This gives employment to hundreds of women and girls and to all boys who are old enough to work. The different plantations of shade-grown are sending trucks to carry help, not only from this village but from Tariffville, Bloomfield, Avon and Collinsville.

Although the labor situation early in the season caused some uneasiness, there seems to be no scarcity of ordinary labor at the present time. Contractors are paying $5 a day, but other laborers are being paid $4. Boys who are old enough to pick the shade-grown tobacco are receiving $2.50 and $3, although one plantation adjoining Simsbury is reported to have been transporting boys from Hartford and paying them only $1 per day.

Growers are very optimistic concerning the crop which at the present time gives indications of being one of the best of recent years, and if curing conditions are favorable the crop should be a banner one. One and a half million dollars is a conservative estimate of the value of the shade-grown crop in this section.

Schulte Stores Policy

It long has been known that in the larger cities, at least, some department stores rent out single departments, protecting the firm name by exercising supervision over the character of merchandise sold by the concessionnaire. This apparently has provided the basis for the new policy inaugurated by the Schulte Stores in taking over the cigar department of a Chicago store and announcing that similar acquisitions are planned for each of the large cities. This would seem to indicate that negotiations with United Cigar Stores are off definitely. Some of the stock bought around 60 by firms with southern connections has been sold above 95, but trade interests here have not disposed of their holdings.—*Financial America.*

P. & T. Changes Quarters

The office of the wholesale cigar department of Park & Tilford, Inc., under the management of Irvin Studwell, has been removed from 524 W. 42nd street to 225 Fifth avenue. Telephone, Madison Square 7800.

Bright Outlook for Cleveland Tobacco Industry

Transportation Factors Improving and Shipments Reaching Their Destinations Promptly—Cigar Manufacturers Not Handicapped by Labor Shortage.

CLEVELAND, Ohio, Aug. 4.—From the way the month of August has begun it bids fair to outdo its predecessor in point of success for the tobacco and allied products industry in this section. A wave of extremely hot weather did not help things to any great extent toward the end of last month. Although business generally thrives on good weather, which includes warm weather of a sort, oppressively hot temperature has a retroactive effect.

Resort Stands Cleaning Up

Resort stands are cleaning up, and will continue to do so while the good weather continues, good weather in their case, being the hottest they can get. The City Park stands are selling lots of cigars and cigarettes, as also are the stands at Euclid Beach, Mentor Headlands, Willoughbeach and others of the same class.

Conditions are all that can be desired, or expected. There is no scarcity of help, apparently, which would tend to handicap manufacturing activities. Transportation factors are also coming along in fair shape, and shipments are practically sure of reaching their destination in a fairly reasonable time.

Collections have long since ceased to be a bugbear to cigar men. All in all, things look decidedly rosy, and the horizon of hope for the cigarist looks not the least bit cloudy.

From Indianapolis

M. Gale, head of the well-known Indiana Cigar Co., of Indianapolis, drove into town this week for a short visit. Mr. Gale was received by Van B. Winters, of the La Palina force here, as he features the La Palina through his territory. His stay in town will surely be a most pleasant one, with so entertaining and thoughtful a host as Mr. Winters in charge.

Opens New Store

The United Systems Co. has opened a new store at the corner of Euclid avenue and East 17th street, in the heart of Playhouse Square. This is a fine location, with unlimited possibilities as to growth.

Selling Manilas

One of the pioneers of the Manila cigar field was a visitor in the city this week, in the person of Horace Kelly. Kelly's Manila smokes are featured all over the city and sell in quantities large enough to bring big, everlasting smiles to the faces of the dealers and also to the man behind the gun, Horace Kelly.

Jimmy Gets Back

Jimmy Rowen, hustling sales manager of the A. D. Goodman Co., large local distributors, returned the other day from a very enjoyable vacation trip. To make Websters, Farraguts, Caremes and Portuandos go any better than they have been going of late is a man sized task, but if we can judge by past performances, the Goodman brands should hit the trail at even higher speed, now that Jimmy is back in harness.

Rameses Cigarettes Popular

Harry "Kosher" Kozier showed up in town this past week with his customary line of Rameses cigarettes. Harry is a real hustler and no bet is overlooked whereupon this cigarette's sale can be bettered. Harry sees to it that every worthwhile location in town is fixed up with all the Rameses they can use, and this comes to quite a sum.

Waldorf Cigar Stand

The Waldorf Restaurant, to be operated in conjunction with the Clark Restaurant System, has opened its doors at the busy corners of East Ninth and Chester avenue. One of the finest restaurants in the city, or anywhere else for that matter, was shown to us by the Waldorf management. In conjunction with the restaurant will be operated one of the best equipped cigar stands in the country. The stand will be patterned after the ones now in successful operation at all the Clark restaurants and will be managed by C. E. Ecclestone, the man who made the Clark stands the big success that they are at the present time.

Sol Korn, the well-known representative of the Martinez Havana Co., favored the Fifth City trade with a call last week. Sol sells an increased number of Martinez cigars every time he comes to town and he has been coming here for some little time now.

Sam Gates Coming

The boys down at the office of A. D. Goodman, local distributor of Webster cigars, were expecting Sam Gates to drop in on them some time early this week. Sam is expected to bring back the good news that the factory will let A. D. Goodman have more cigars shortly, in order to fill some of those back orders that have been on file so long.—HERB.

Supervises Packing

Joseph J. Day, of the Industrial Leaf Tobacco Co., is spending several weeks in Porto Rico, where he is supervising the packing of the new crop.

New Cigar Emporium

STOUGHTON, Wis., Aug. 4.—N. L. Lindley and Hal Broughton have leased part of the O. K. Store building and will open a cigar store here.

Chicago Interested in Department Store Move

Schulte's Taking Over of The Fair's Cigar Department Thought To Be First of Many Such Transactions to Follow—Announcement Made to That Effect.

CHICAGO, Aug. 4.—It long has been known that, in the larger cities at least, some department stores rent out single departments, protecting the firm name by exercising supervision over the character of merchandise sold by the concessionnaire. This, apparently, has provided the basis for a new policy inaugurated by Schulte Stores in taking over the cigar department of Fair department store here, and announcement that similar acquisitions are planned for each of the large cities. The cigar department of The Fair is one of the largest in Chicago, if not the largest in the middle west. Its yearly sales have been over a half million dollars. The news of the purchase greatly surprised the Chicago trade. The turnover will greatly effect many eastern and Tampa factories which for years have sold thousands of dollars' worth of cigars to The Fair.

Much in Evidence

The Blue Boar man is around, handing the boys $2. Everybody got busy and Blue Boars are now on the tops of all the cases.

Nina E. Baker, the Webster building cigar store owner, leaves shortly for a trip to California, where she will enjoy a well-earned vacation.

Sol M. Bernstein, head of Sol M. Bernstein & Co., accompanied by his family, is off to Atlantic City, where he will spend several weeks with Louis Cohen, president of the El Predomino Cigar Co. of Philadelphia.

Corina covers the billboards all over the city. "Puffs of smoke to ponder over—the last puff is not enough." This is how José Escalante & Co., of Tampa, who manufacture Corina cigars, talk to the consumers.

The R. & S. Smoke Shop at 55 East 18th St. shows a large and attractive El Javana cigar display.

Showing on all the store windows are signs featuring Camel, Chesterfield, Murad and Herbert Tareyton cigarettes.

Busy Somewhere

Have been asked to place Robert Brunton in the "lost, strayed or stolen" list. Where are you, Bobbie? Bob is general sales manager out here for the Falk Tobacco Co.

A Merchant's Affair

The Chicago Merchandise Fair is now on at the Coliseum. It will close August 11. It is strictly a merchants' show and only retailers and jobbers are admitted.

"Original"

The Ruhstrat-Christian Co. is going big with The Original Garcia 5 cent cigar. Large signs now appear in many of the store windows. R.-C. Co's Original Garcia is one of the leading 5 cent cigars here.

A new cigar store has opened at 4638 Cottage Grove Ave.

New Wholesale House

Hynes-McCarthy Co., 2100 Third Ave., Rock Island, Ill., is a new wholesale grocery house that has started business. It will feature in cigars six sizes of Virginia Lee, mild Havanas and the 5 cent Frat, both from the Wm. J. Seidenberg Corp. It will cover Moline, Davenport, Rock Island and surrounding territory.

Glowing Reports

Reports arrive telling how big Gonzalez Tales of Smoke are selling in the Rothenberg & Schloss retail stores in Kansas City. This long, slender Cuban smoker comes from the factory of Eduardo Gonzalez & Co., Tampa. It is also widely placed in the Chicago market.

Announcements say "45 cigarettes to a tin and that's why Velvet tobacco sells." At present Velvet is featured in the Chicago newspapers.

At the Sign of "United"

The United Stores all feature Pancho Arango, clear Havana; Recollection, mild Havana, and Ricoro, a Porto Rican blend. Large signs on all their windows call the smoker's attention to these three featured cigars.

The Buxbaum Co. of Milwaukee is having quite a run on the Gonzalez cigar, which is made in Tampa.

Jacob P. Brill of the Wm. J. Seidenberg Corp. is in Ohio this week, booking early Christmas orders for Pancho Arango and Virginia Lee cigars.

Featuring Van Dycks

The General Cigar Co., Inc., has started its newspaper campaign on the Van Dyck brand. The first ad was shown in last Sunday's paper. A quarter page featured Van Dyck, the "very choice." Van Dyck is very popular locally and the 10 cent, two for 25 cents and 15 cents straight sizes, are the big sellers.

Popper's Ace, in neat tin cans, with a glass cover, are seen on many counters. This brand, from E. Popper Co. of New York, is placed with the Chicago trade by Many-Blanc & Co.

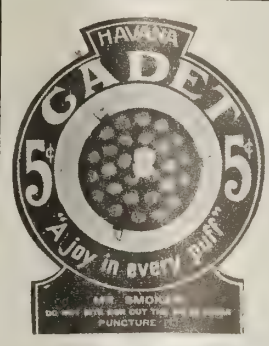
Max Maier, the well-known New York leaf merchant, visited the Chicago factories this week.

In Good Demand

E. P. Oakes is around the Loop and he finds an increased call for Cressida, the E. H. Gato Cigar Co's Key West, clear Havana. Ryan & Raphael Cigar Co. is the local jobbers of the Cressida brand.

Doc Rosobro of the New York-Tampa Cigar Co. arrived and has left for Buffalo. While here he reported heavy sales all over his territory on Personality and Jenny Lind cigars.—H. L. H.

Army Orders Alhambras



SAN FRANCISCO, Cal., Aug. 4.—H. L. Judell & Co. have secured the Southwest Cigar Co., of Dallas, Texas, as distributors for the Alhambra Manila brand. Incidentally the Judell firm received an order the other day for 100,000 Alhambras for the United States Army.

Florida and Georgia Growers Discuss Problems

About fifteen members of the Florida and Georgia Tobacco Growers' Association met at Quincy last Tuesday to discuss problems pertaining to the tobacco industry in the county with Dr. Wilmon Newell, director of the Agricultural Experiment Station at Gainesville; Dr. O. F. Burger, pathologist at the station, and Dr. W. B. Tisdale, in charge of the local tobacco experiment station.

The principal topic of discussion was the control of diseases peculiar to tobacco and the progress that has been made in the matter of seed selection to produce disease resistant plants. Dr. Tisdale has conducted som interesting experiments along this line that give promise of solving some of the problems confronting growers in this district.

The question of retaining permanently E. G. Beinhart, expert plant breeder, who has been working under direction of the association for the past two months was discussed, resulting in the passage of a resolution that the president and secretary endeavor to secure twenty men to underwrite a sum of money necessary to meet the salary. It is proposed to hold another meeting shortly to decide this matter.—*Gadsden Times.*

Manufactured by

MANCHESTER CIGAR CO.

YORK, PA.

R N. PARIS
Sales Manager

"Made As Clean As the Bread You Eat"

Printers' ink and the sign man's paint are combining to make the Central Cigar Manufacturing Company's Manhattan Cigars one of the best-known brands in the Brooklyn division of the metropolitan market, says Willard Stanton, sales director of the Central Cigar Manufacturing Company's jobbing department.

Despite the fact that Manhattan cigars have only been locally distributed for a little more than two months, the Central Cigar Manufacturing Company has already secured better than a 50 per cent placement in the Brooklyn retail stores, and shortly after Labor Day the company expects to extend its jobbing efforts to include additional metropolitan territory in Harlem, the Bronx and Westchester county.

Much novel advertising material has been used to help to acquaint the cigar smokers of Brooklyn with the virtues of this really excellent brand of Sumatra wrapped, Havana filled cigar. In addition to some excellent billboard display work and car card advertising, the Central Cigar Manufacturing Company has been carrying on a direct-by-mail to the smoker campaign.

One of the Effective Advertising Signs of the Central Cigar Mfg. Co.

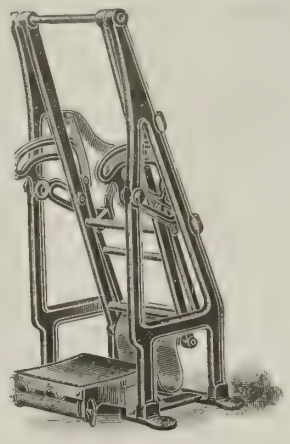
Modern Manufacturing Methods

An attractive folder describing and illustrating some of the manufacturing methods used in producing the excellent smoking qualities of Manhattan cigars has been mailed to more than 25,000 smokers and, judging from the repeat orders being received at the company's Canal street plant, the manufacturing slogan, "Made as clean as the bread you eat," has appealed to the taste of the veteran smoker.

In their letter to the smokers, the Central Cigar Manufacturing Company has extended a cordial invitation to visit their large modern factory at 505-511 Canal street, New York, where hundreds of thousands of cigars are being made daily under ideal factory conditions. Many smokers have already accepted the company's invitation and it is safe to say that every man who goes through the company's plant comes away a confirmed Manhattan enthusiast.

Manhattan cigars are referred to in the company's advertising as "The Smoke of New York," and no label perhaps better deserves the slogan. Made by one of New York's oldest and largest cigar manufacturers and named after Father Knickerbocker's favorite island, the Manhattan well deserves its title, and from present indications it won't be many months before Manhattan cigars are the "Smoke of New York" in name as well as in fact.

Perry Loewenthal



Perry Loewenthal, of P. Loewenthal & Co., passed away last week, a few days after being injured in an automobile accident.

Mr. Loewenthal had been in the leaf tobacco business thirty-five years with his father and brother previous to starting his own firm. Perry Loewenthal and his brother, Samuel L. Loewenthal, conducted the firm of P. & S. Loewenthal for more than thirty years at 138 Water street. They dissolved in 1910, Perry forming the firm of P. Loewenthal & Co., and his brother the firm of S. Loewenthal & Son.

Mr. Loewenthal leaves a wife, Bessie, a daughter, Minnie L. Sachs, of Philadelphia, now in Europe, and two sons, Harry P. and Adolph Loewenthal. Mr. Loewenthal was a member of Shakespere Lodge No. 750, F. & A. M., Congregation Rodeph Sholem and several charitable institutions. His home was at 349 Central Park West.

NEW YORK, THURSDAY, AUGUST 9, 1923

AMERICA'S GRIEF AND HOPE

The nation mourns the death of its President, who by his character and quality of human sympathy had won for himself an intimate place in the lives of the people. His death, coming as the result of unceasing devotion to the great duty to which with modesty and solemn devotion he had given himself, leaves the country another heritage which will help it to carry on the fine spirit of American manhood on which the future must rest.

Some of the many splendid attributes of Warren G. Harding are set forth in the following proclamation issued by President Calvin Coolidge:

"By the President of the United States of America, a proclamation:

"To the people of the United States:

"In the inscrutable wisdom of divine providence, Warren Gamaliel Harding, 29th President of the United States, has been taken from us. The nation has lost a wise and enlightened statesman, and the American people a true friend and counsellor whose whole public life was inspired with the desire to promote the best interests of the United States and the welfare of all its citizens. His private life was marked by gentleness and brotherly sympathy, and by the charm of his personality he made friends of all who came in contact with him.

"It is meet that the deep grief which fills the hearts of the American people should find fitting expression.

"Now, therefore, I, Calvin Coolidge, President of the United States of America, do appoint Friday, next, August 10, the day on which the body of the dead President will be laid in its last earthly resting place as a day of mourning and prayer throughout the United States. I earnestly recommend the people to assemble on that day in their respective places of divine worship, there to bow down in submission to the will of Almighty God, and to pay out of full heart the homage and love and reverence to the memory of the great and good President whose death has sorely smitten the nation.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, the fourth day of August, in the year of our Lord, one thousand nine hundred and twenty-three, and of the independence of the United States the one hundred and forty-eighth.

"CALVIN COOLIDGE.

"By the President,
"Charles E. Hughes,
"The White House,
"Washington, August 4, 1923."

While America's head is bowed with grief, its hope is centered in a new Chief Executive who has given many evidences of being safe and sane.

At his inauguration as President of the Massachusetts State Senate nine years ago, Calvin Coolidge couched his inaugural address in an even hundred words, which was a classic for brevity and clarity—a veritable *multum in parvo,* as follows:

"Do the day's work if it be to protect the rights of the weak; whoever objects, do it. If it be to help a powerful corporation better to serve the people, whatever the opposition, do that. Expect to be called a standpatter, but don't be a standpatter. Expect to be called a demagogue, but don't be a demagogue. Don't hesitate to be as revolutionary as science, don't hesitate to be as reactionary as the multiplication table. Don't expect to build up the weak by pulling down the strong. Don't hurry to legislate. Give administration a chance to catch up with legislation."

TOLD BY A TRAVELER

Usually in the smoking compartment of a Pullman car, there is an atmosphere of friendliness. Though haughtiness, testiness, diffidence and reluctance to make acquaintance may have been evident elsewhere on the train, the brotherhood of man soon is acknowledged at close quarters under the soothing influence of tobacco. Even the grouchy passenger hardly will consume a good cigar in frigid silence. Almost any excuse will serve to break the ice. Perfect strangers speak to each other. A conversation, commencing casually, may develop into an earnest discussion or an exchange of confidences as the train speeds on. To a chance companion in a smoking car, to a person he never saw before, a traveler freely may tell more than he would reveal to his brother-in-law. Such is human nature.

Experience warns the knowing smoker, when he goes on a railway journey, to obtain a good supply of smokes. At what stops he makes, he may not be able always to get his favorite brand. He remembers, too, that it is wise to be well provided. For, while traveling, a man generally smokes more than he does at home. Smoking relieves fatigue. It makes a long trip less tiresome. Cheerfulness is associated with tobacco smoke.

The nonchalant traveler squats on a cushioned seat in the smoking compartment and stays there, perhaps for hours. Solaced by cigar, cigarette or pipe, he may fume but he doesn't fret or show the irritation that nonsmokers often exhibit on a train. Enjoyment extracted from tobacco is an antidote to the poison of weariness.

As the hours pass, the click and whirr of hard driven wheels become monotonous. The motion of the rushing train is displeasing. The flitting view from the car window has less interest. In the main part of the Pullman, bored and disgusted men are grumbling to themselves or complaining to the porter. Tired, dejected, disinclined to read, unable to rest, dissatisfied, distressed, unwilling to ignore discomfort, they squirm and mutter. Inwardly they curse the wretched ride. Nervously they look at watches. They will continue to be peeved and worried until the journey is done.

In the smoking compartment, however, things are different. The place may be crowded but no one growls. Though the air is thick with smoke, ease is observed, contentment is seen. Good fellowship is disclosed. Each smoker is showing the sunshine side of his disposition. All desire to seem agreeable. Information is given. News of the day is discussed. Stories are told. Jokes are cracked. Ideas are expounded. Business is described. Opinions are compared. Personal history is related. Half a dozen conversations may go on at once. Or one person may have the floor. On occasion, the smoking compartment may be a forum in miniature. Absorbed in tobacco and talk, travelers are less likely to be irked by a railway journey. They are not so watchful of the flight of time. To many, the smoking compartment minimizes the discomfort of travel by rail.

The Pullman Company, which is not accused of overlooking opportunities to secure ample revenue, intended originally that the popular compartment should be, primarily, a place in which to "clean up." Combining the functions of lavatory and dressing room for male passengers and providing a spot where the porter could repose after midnight, the inclosure at one end of the car is only allotted incidentally to smokers. They can have the space when it is not requisioned for other uses.

In recent years, not many improvements have been made to the so-called standard sleeping cars. Despite the greatly increased number of travelers addicted to tobacco, the Pullman Company has not enlarged the accommodations it provides for those who smoke.

By people who may not be wild prophets, predictions are made, rather constantly, to the effect that most passenger travel will be by aeroplane, ten years from now. To those who live and thrive through railroad operation, the threat of prospective aerial competition is intimidating, especially when additional expenditures are suggested. Who could foresee, twenty-five years ago, the immensity of automobile business today? In less than twenty years, the "flivver" caused its manufacturer to become the richest man in the world. Between the tremendous use of the auto and the anticipated utilization of the aeroplane the railroads of the country are caught.

All over the land auto trucks have taken, and are taking, local freight traffic away from the railways.

Because of the number, speed, comfort, convenience, availability, utility and comparative cheapness of automobiles, the highways now are arteries of travel greater than the railroads. People motor everywhere.

Some little invention, tomorrow, may enable traffic to take air routes. Already it is conceded that the journey by aeroplane from New York to San Francisco can be made in a day.

If, in a few years, the Pullman car will be as obsolete as the horse-drawn buggy is at present, one can understand the disinclination of the Pullman Company to lengthen and improve its hotels on wheels.

But until the standard sleeping car is discarded, the smoking compartment in the Pullman will be occupied by travelers, although its furnishings and arrangements may remain unchanged.

A smoking compartment in a Pullman car is a temporary container generally filled with excellent samples of American citizenry. A shrewd politician declares that the quickest and surest way to ascertain or gauge public opinion in the United States is to take a railway trip across the country. "Remain in the smoker most of the time and listen attentively to what is said there." People who travel are representative and important. In off-hand or free and easy conversation, such as occurs in a smoking car, they are likely to say exactly what they think. They wouldn't be so definite or informative, if interviewed for publication.

In the smoking compartment, a manufacturer or merchant at times will find it advantageous to have good ears. Frequently he hears things that set him to thinking. By a chance remark, his attention might be attracted to a business opening of which he did not know previously.

A salesman, journeying from St. Paul to Seattle recently, happened to give a cigar to an entire stranger. The cigar, handed out unwittingly, started a talk that led up to a sale on which the salesman made a legitimate commission amounting to $1,650.

Another salesman, traveling between Portland and San Francisco, was not so fortunate. In the smoker, one morning, he unwisely explained, boastingly, that he had everything fixed to unload on a certain firm. Unknown to the salesman, a son of the head of that firm heard what was said. Son informed father, without

delay. Consequently, instead of "unloading" as he might have done, the only order the boastful salesman got was a gruff, firm order to get out and stay away.

Just how are hit upon or chosen the cigars that the Pullman Company sells to travelers on trains, an outsider might not dare to say. Often the brands offered undeniably are good. But sometimes the choice seems to be as odd as the names of coaches. The assortment is varied. Each time a different dining car is attached to a train, the buyer's opportunity to choose cigars appears to be confined to another selection.

Throughout the country cigarette smokers are supposed to outnumber by far the smokers of cigars. Yet the observer in the smoking compartment of a Pullman car almost anywhere would infer that cigar smokers were in the majority. Apparently men who smoke cigarettes chiefly and cigars occasionally prefer cigars on trains.

Incidentally, cigar manufacturers receive some advertising from travelers. In the smoking compartment, frequently, a man tells what his favorite smoke is. And he may be convincingly enthusiastic in describing the merits of the brand. Such word of mouth advertising is indeed good for the cigar manufacturer.

But the cigar industry doesn't get enough advertising. Either cigar manufacturers can't or don't avail themselves of opportunities that others use to seeming advantage. For instance, take the bill of fare. In the dining car and in numerous other places where meals are served, cigars and cigarettes may be sold yet no one says so, in print. On menu cards of hotels, restaurants and clubs, mineral waters are not mentioned indefinitely or collectively. The trade name, the brand of the beverage is set forth, often in fancy type. The bottler of the mineral water or the manufacturer of the other beverage gets advertising. He has his particular product brought prominently to the attention of habitues of clubs and patrons of swell hotels and restaurants. Possibly he isn't put to much, if any, expense for such publicity.

In the clubs, hotels and restaurants, cigar and cigarette sales may amount to much more than the receipts for mineral water and other kickless drinks. Yet, does the bill-of-fare enumerate and particularize the smokes one can buy in that dining room? Where do menu cards assist to advertise cigars and cigarettes?

IT'S A SMALL WORLD

What has happened to the American farmer in the matter of his wheat, corn, hay and hogs, is quite likely to happen to him in the matter of tobacco. For a great many years America had practically a monopoly on the production of this crop. Today nearly every country on earth grows it. A list of the producing countries would show tobacco to be cultivated as far north as Quebec and Stockholm and as far south as the Cape of Good Hope and Victoria. It is grown in countries widely differing in soil and climate, such as Sumatra and France and Cuba and Germany.

The tobacco plant is native to this continent, but its adaptability is such that it flourishes when introduced almost everywhere in the temperate zones. More of the crop can be produced than consumed, even with constant increases in consumption. The tobacco growers of this country discovered this when they produced 200,000,000 pounds more in 1920 than in 1919 and received $200,000,000 less for their crop. The result of this was that the 1922 crop was almost 500,000,000 pounds less and brought a much better price.

The Ohio, Wisconsin, Connecticut, Kentucky and Virginia grower is working in a market which is diminishing as more and more states and countries undertake cultivation of the plant. The tobacco price war which has been brought on in the British market by the importation of Virginia tobacco grown in British Africa probably is the forerunner of sharp competition in other markets of the world between tobacco producing countries. If tobacco responds in the degree indicated by the first efforts at cultivation in other countries, that day of keen competition evidently is not far distant.—*Dayton (O.) Journal.*

WHY RETAIL CLERKS MAKE GOOD

"I've had several salesmen in my employ for periods ranging from two to seven years," said a successful middle western tobacco dealer, "and these salesmen have all made good at my store in a big way. Recently, while noticing some statistics telling why tobacco clerks fail to make good, I decided to analyze these leading clerks of mine to see why they are successful.

"This is the result of my analysis:

"Forty per cent of their success I feel sure is due to their constant industry in waiting on customers, in arranging stock, etc.

"Twenty per cent of their success is due to the fact that they follow the instructions I give them and don't try to make me think they know more about running the store than I do.

"Fifteen per cent of their success, I feel certain, is due to constant tact and courtesy.

"Ten per cent of their success is due to the fact that they have confidence in themselves and in this establishment.

"Seven per cent of their success is due to the fact that they thoroughly know the goods they are handling.

"Four per cent of their success is due to the fact that they have kept alive and alert on the job.

"Four per cent of their success is due to the fact that they are enthusiastic about their work."

Park & Tilford Control Passes to Schulte

Control of Park & Tilford, one of the oldest grocery distributing houses in New York, which had been held by Frank Tilford, president of the company, since 1906, was transferred last Thursday to David A. Schulte, president of Schulte Cigar Stores Co.

The Schulte organization already operates nearly 300 stores and now adds to its activities the big grocery business of Park & Tilford. The latter concern operates five large stores in New York and one at West End, N. J. It also manufactures candy and cigars, its business extending to all parts of the United States and to some extent in Europe.

Park & Tilford have an outstanding capital stock of $2,250,000 and an issue of $2,360,000 debenture sinking fund 6 per cent bonds, due June 1, 1936.

Company's New Officers

The new officers of the company are: David A. Schulte, president and chairman of the board; John A. Badenoch, vice-president and general manager; Gordon Stewart, vice-president; Edwin H. Koehler, vice-president and treasurer, and Udo M. Reinach, secretary. Mr. Reinach, at the Park & Tilford offices, issued the following statement from Mr. Tilford:

"I wish to announce that the control and management of Park & Tilford, which I have held since 1906, have been transferred to Mr. David A. Schulte, president of the Schulte Cigar Stores Co. I have long contemplated some such transfer in order that new energy and capital might be obtained, but I have consistently declined to act until it was my good fortune to receive a proposal from Mr. Schulte which resulted in the present arrangement.

"Mr. Schulte's success as a merchant and his extraordinary organizing ability—which I have learned to value through my relations with him extending over many years—assure me that I have found in him a worthy successor.

"The house of Park & Tilford was founded in 1840, and for more than eighty years has meant quality of merchandise and efficiency of service. It is now its good fortune to have found in Mr. Schulte a sponsor who promises not only to continue Park & Tilford's established policies, but greatly to extend the scope of the business.

"I shall continue to be identified with the company, and shall co-operate with the new management in its plans for the future."

Holding Company to List Stock

All stock of the Park & Tilford Co. will be held by a holding company, to be called Park & Tilford, Inc., and this new concern will issue 200,000 shares of common stock with no par value. Mr. Schulte has announced that this stock had been over-subscribed already by his friends and associates. Application will be made for listing it on the New York Stock Exchange within a few months.

Frank Tilford, president of Park & Tilford, will be chairman of the advisory board of the holding company. Other members of the board will be David A. Schulte, John A. Badenoch, Gordon Stewart, Charles E. Hotchkiss and Edwin H. Koehler. With the exception of Mr. Hotchkiss all these men hold executive positions in the Park & Tilford Co. This advisory board will consult with the board of directors on matters of policy.

Under the management of Mr. Schulte, who has developed a chain of 260 retail stores, doing an annual business of $30,000,000, Park & Tilford will open special shops where will be sold cigars, candy, perfume and toilet articles, basket fruits, tea, coffee and Park & Tilford package groceries. It is planned to establish three of these shops in New York City and about one hundred in the principal cities of the United States.

Besides these shops, which will be run under the direct supervision of Park & Tilford, agencies for their products will be given to high class retailers in cities of over 20,000 population. These agencies are to have special departments in their stores for the exclusive display of Park & Tilford goods.

Schulte Retail Stores Dividend

A stock dividend of $2 per share has been declared payable in preferred stock on September 1, 1923, to the common stockholders of record at the close of business August 15, 1923.

Griffin Co. Dividend

HARTFORD, Conn., July 30.—The board of directors of the Griffin Tobacco Co. has declared a dividend of 1¾ per cent on the preferred stock, payable Aug. 1, 1923, to stockholders of record at the close of business July 28, 1923.

Up-State Trade Brisk and Collections Excellent

Each and Every One Busy, Up-State, Even the Hot Chair Club! —Help, Help, Help, Cry the Cigar Factory Folk! and the Dealers Shout for Goods!—Even Dun Admits Albany Trade Is Well-Done!—From Vermont Comes a President and a Salesman!—Johnny Ryan Introduces His Friend Marshall Field!—Natural Blooms Via Dearstyne's!—August O. K. for Cap'n Doylie!—Gen. Wood Has Trouble Enough!—Did Schulte Win Over the United?—Anyway, Schulte's Got P. & T. to Boss Now!

New York State
Capitol District
Rush-Week, 1923.

"Wait a minnit, wait a minnit!" implored Sam Ash, trying to wait on three customers with two hands, as the crowd surged into the wholesale and retail emporium o' Stubb & Ash, Inc. "Yuh should all mebbe think it I ain't even a centipede, understan' me, an' how should I 'tend to everyone right away, hey?"

"Take it easy, Sam, take it easy," admonished Jim Stubb, rolling up his sleeves to meet all comers—Firpo excepted. "You'll live longer with less temper and less money! Make 'em wait their turn—we got goods enough for everyone, I guess!"

"Mebbe we have, then again mebbe we haven't," worried Sam Ash, hurriedly glancing over the depleted stock room, "Never in all my life, y'understan', have I seen it such a rush for stuff as in this last week! What's the matter—is every smoker under contract to use more goods than these here factories can turn out, hey?"

Dun Says It's Being Done!

"All the shops are short handed, Sam," put in Jim Stubb, wandering back to the Hot Chair Club during a little lull. "Factories thruout the Capitol District want more help. And they can't get it! So the supply situation will very shortly be in war-day class, unless the boom busts!

"Why, this week, speaking of Albany business in general, the R. G. Dun Commercial Agency says the jobbing trade is excellent. Salesmen report the best business roundabout in months. Even collections are good—one traveler reporting $4,100 for the past week, which was a record for him."

Eddie Almost Knows Him!

"Yes, yest, trade is fine!" smiled Eddie Quebec, joy-jammer for the D. G. Quebec Cigar Company, Rutland and all points north, east, south and west, as he sauntered into the meeting of the Committee on Commerce. "Had a bang-up week on El Versos and San Felice. Never better!

"And let me tell you something. We're going to discontinue, in this territory anyway, the 1/10th packing of San Felice. Those big boxes don't fit into retailers' cases these days, while the display is bad—very bad. So it's 1/20ths hereafter, with the packets of ten going nicely during this vacation period.

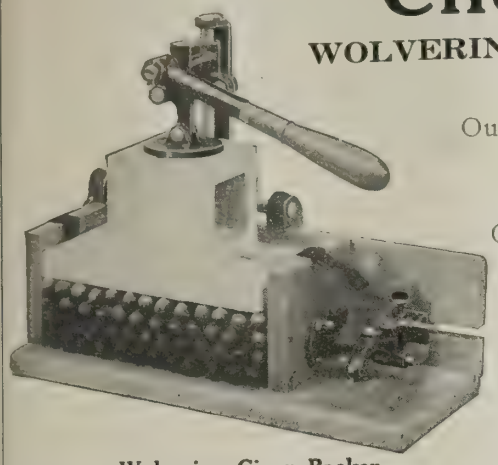
"Speaking of vacations reminds me that our new President, Coolidge, belongs up in our Vermont country. His old home town, Plymouth, is only a few miles from our place. Big times for Vermont, as it is the very first President our State has had, notwithstanding his present allegiance is to Massachusetts."

See What Johnny Has Now!

"Well, my new allegiance is to the Marshall Field cigars," announced Johnny Ryan, spreading 'em out on the nearest case to the wholesale buyer. "Here in this vicinity we are distributing thru the Dearstyne Brothers Tobacco Company.

"And, so far, my sales have been wonderful, really wonderful. This is all brand new business, of course, but there is no doubt the cigar will duplicate like a sheet o' carbon! One of our many emplacements this week is at the Myron J. Canaday stands, in the Hotel Ten Eyck."

Blooming a la Nature!



"Practically, we've covered the town," admitted Earl Goodrich, special-agent (not secret-service) o' the Dearstyne Brothers Tobacco Co., as he followed Ryan into the outskirts o' the Hot Chair Club. "Every dealer has now enjoyed the opportunity to buy the Marshall Field brand.

"So, in a quiet way, we are also selling the Natural Bloom. This is a recent line

for our cigar department, and we've made a big retail window display on our Broadway front this last week. There is quite a demand for this cigar in the downtown section, no doubt of that."

Busy? Very, Admits Cap'n Doylie!

"But the demand for our goods covers all sections," claimed Cap'n P. V. Doylie, king-pin o' the Liggett & Myers Tobacco Company's Capitol District cigaret rovers. "Especially is this true in the good ole summer time!

"For now, with the vacation resorts all rushed, the sale of Fatima and Chesterfield cigarets in all parts of this New York and Vermont territory is almost beyond belief. Our local sales and advertising department is doing the very best it can, but it is almost impossible to reach all parts of this vast vacation land during the lively month of August."

Does General Wood Know This?

"Busy times, no exceptions," nodded Edmund Kelly, the man who puts Manila cigars across the counters for Horace R. Kelly, importer and jobber. "Right now I've really got more territory to cover than six salesmen. Thirty-five cities, strung half-way across the continent, I've simply got to make this trip.

"And here is my stock sheet. Look at all these items of Filipino cigars! Some thousands, some millions! And they'll be quite cleaned out before I return, I bet you that! People want Manilas, and they're buying them in quantities large enough to make the domestic producers quite envious.

"Cheap Manilas are still numerous. But the demand is showing better every day for the nice sizes. In time to come I believe Manila will supply some of the best goods smoked in this country!"

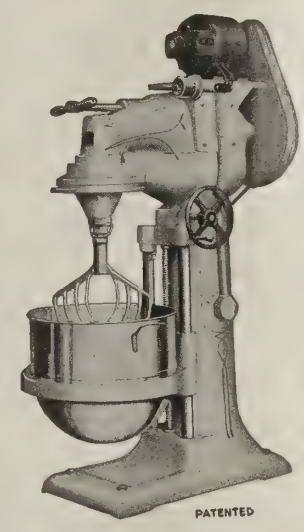
Who Opened First—Schulte or United?

"Temporarily, though, Schulte and the United are supplying the demand," remarked Jim Stubb, getting up again to help Sam Ash with the one o'clock jam. "They appear to sell more Manila cigars than any other retailer, collectively and individually.

"And, now that they have just opened their two new Albany stores they're ready to dispose of even more Manilas—and others. But it's a peculiar question as to who deserves the credit for the first opening. Sure, Schulte is pretty well settled. But the United is doing business, too, except that their Columbia street corner window was not quite finished this week.

"In the Schulte store, at the Dearstyne former location, South Pearl and Division streets, the trade hasn't opened with the old time Dearstyne scramble, but it may develop a little later. Both stores are good shots, but secondary, of course, to the original Pearl street locations of the two corporations."

So Schulte Takes Over P. & T., Eh?



"Yeh, mebbe what yuh say is so—I don't know," admitted Sam Ash, still checking over shy items on the shelves o' stock. "But I do know that this here Schulte feller put over a classy deal, y'unnerstan', when he grabbed off Park & Tilford this week.

"And, in that connection, does that make the Albany Park & Tilford store of the Banfil Grocery Company, a Schulte branch? Ask Myron Higgins, the President o' Banfils, an' he laughs kinda funny. Does he think it's a joke or a loaded cigar—which?"—*The Smoker.*

No Tax Dodging

"H. E. Dunhill has been appointed managing director of Alfred Dunhill, Ltd., pipe manufacturer, etc., for five years at £4,000 per annum, plus 5 per cent upon net profits in excess of £30,000 in any one year" read an announcement of the admission to trading on the London Stock Exchange of the Dunhill shares. Not only is this an unusual corporate matter to make public, but it emphasizes the English frankness in business matters and undoubtedly the government revenue collectors will have little trouble "checking" Dunhill's tax return—*Wall Street Journal.*

Havana Tobacco and Cigar Exports for Two Years

Figures showing the exportation and value of Havana tobacco and Havana cigars during the fiscal years 1921-1922 and 1922-1923, as compiled by *El Tobaco*, of Havana, Cuba:

	Bales	Value	Cigars	Value
1921				
July	26,789	$2,598,869	4,531,809	$565,901
August	20,116	1,824,633	4,636,329	545,466
September	25,056	2,331,648	4,521,122	537,513
October	32,060	2,397,692	7,188,045	867,534
November	26,736	1,783,693	6,406,560	796,340
December	21,148	1,531,616	4,357,965	544,304
1922				
January	32,543	2,343,658	4,115,800	515,049
February	28,849	1,686,889	5,961,371	672,989
March	38,691	2,746,499	9,209,587	1,037,096
April	27,252	1,810,928	7,794,939	889,934
May	25,151	1,652,264	6,487,469	737,641
June	25,375	1,645,182	7,235,137	828,424
Total	329,766	$24,353,571	72,446,133	$8,538,191
1922				
July	32,374	$2,059,619	8,451,545	$954,920
August	25,098	1,711,949	6,986,855	807,027
September	28,329	1,860,979	9,609,379	1,080,692
October	29,456	1,593,000	8,741,921	991,441
November	35,642	2,135.885	9,704,229	1,101,544
December	64,491	3,395,121	7,533,517	866,871
1923				
January	43,162	2,959,954	5,716,692	635,356
February	36,592	2,635,526	7,309,594	793,973
March	32,568	2,416,138	8,391,182	926,432
April	25,818	1,947,267	5,810,847	634,801
May	24,739	1,791,482	6,612,150	755,361
June	21,684	1,662,636	8,876,507	1,016,351
Total	391,953	$26,169,556	93,744,418	$10,564,769

From the above table, as compiled by *El Tabaco*, it will be seen that 62,187 more bales of tobacco were exported during the year ending July 30, 1923, than in 1922, with an increased value of $1,815,985 and 21,298,275 more cigars, with an increased value of $2,026,578. This exportation includes all foreign countries, as well as the United States.

Henry H. Abrams

Henry H. Abrams, widely known in cigar circles throughout the country, and for the past ten years Tampa correspondent of the *United States Tobacco Journal*, died last week at his residence at Tampa, Fla. He was recently engaged as a manufacturers' agent at Tampa, selling to the cigar manufacturers there a variety of goods needed in their operations, such as the bands and labels produced by the Heywood, Strasser & Voight Litho. Co., of New York.

Mr. Abrams was very devoted to his family, and his wife and daughter, Miss Dorothy Abrams, accompanied him on many trips to New York and elsewhere. Miss Abrams' betrothal was recently announced. Three brothers and three sisters living in Richmond also survive him.

STANDARD FOR OVER FIFTY YEARS

SIZES 2 FOR 25c TO 25c STRAIGHT

A rare bit of nature's greatest effort, producing a fine, mild, aromatic cigar. Manufactured and aged by the most scientific methods. Not a secret blend, but a combination of the highest priced tobaccos that the finest plantations grow.

Webster Cigar Co.

5545 GRANDY AVENUE DETROIT, MICH.

Key West Key Notes

KEY WEST, Aug. 4.—Tobacco exported to the British West Indies during March of this year is given at 55 pounds. This tobacco is listed under the name of bright flue cured tobacco and was valued at $54. Cuba received 45 pounds of plug tobacco from ports in Florida during the same month. Of cigars and cheroots, there were 2,000 sent to ports in the British West Indies and of cigarettes 245,000, which were valued at $999.

Of tobacco imported there were 468,178 pounds valued at $342,805. This tobacco was listed as for cigar wrappers, 89 pounds valued at $261; leaf tobacco, unstemmed, 224,307 pounds, valued at $191,448; cigar leaf tobacco stemmed, 113,857 pounds, valued at $116,631; and of other tobacco, 129,925 pounds, valued at $33,765. Of cigars 43 pounds were imported, valued at $273.

Exports Increasing Rapidly

The total exports of Florida for the month of March this year is given at $5,079,613. This is far in excess of the exports for the same month in 1922, at which time the report of the collector of customs for Florida showed that $3,031,518 worth of dutiable merchandise went to Cuba and ports in the South Atlantic.

In exports, Key West leads Florida. The amount of merchandise which went from here to ports south of us during March was $2,605,640, which is $829,165 in excess of that which went to the same ports during March, 1922. Pensacola ranks second. Pensacola sent $927,486 worth of merchandise during the same month. Jacksonville ranks third with $878,390; Tampa fourth with $387,830; Fernandina sent $115,005 worth of merchandise to Cuba, while Miami's exports increased from $73,380 in March, 1922, to $96,291 in March, 1923.

Pensacola Leads in Imports

Pensacola leads the state in imports. During March Pensacola imported $1,073,750 of dutiable goods. Other cities which imported dutiable merchandise from ports in Cuba and the West Indies are Key West, Tampa, Jacksonville, Miami, and St. Augustine. Jacksonville ranks second with $584,251; Tampa with $568,953; Key West, $208,737; Miami, $32,454, and St. Augustine with $369, making a total of $2,468,514 of dutiable merchandise received from Cuba and West Indian ports in one month of this year. This shows a decided increase compared to imports for the same month in 1922, when the total of merchandise received amounted to only $817,568.

New Key West Folder

The Chamber of Commerce has prepared and is issuing attractive folders describing the many charms of Key West. As the cigar factory industry is so closely associated with this city, the folder tells that "The principal industry in Key West is the cigar business. You who have had the exquisite pleasure of smoking a Key West cigar know that nowhere else in the world are cigars made as they are made in Key West.

"The Key West cigar is famous the world over. Thousands of times daily the request 'Give me a Key West cigar' is made throughout the country and in each instance the term 'Key West' is used as synonymous with 'Havana.' Other cigar manufacturing cities have been bidding and fighting for years to take the 'Clear Havana' factories away from Key West; they offer big inducements in land, buildings and money to get them because the cost of cigars made in a 'Spanish System' Clear Havana factory means so large a percentage in wages. Retaining these factories, establishing others, and success of making the best cigars on earth is not due to accident, but to the natural advantages we possess."

Cigars Manufactured in June

The number of cigars manufactured here during the month of June is given at 3,715,999, and of these Class C leads. Cigars of this grade were manufactured to the number of 2,590,378. Other classes and the number of each is given as follows: Class A, 586,750; Class B, 285,430; Class D, 229,941, and Class E, 23,500.

Revenue collected for the sale of stamps is given at $1,402.27.

Samuel Gilbert Here

Samuel Gilbert, president of the Webster Cigar Co., of Detroit, is visiting Water street this week.

To Open Store Shortly

WEST ALLIS, Wis., Aug. 4.—B. Wischer plans to open a cigar and tobacco store shortly at 6119 Greenfield street.

San Francisco Manila Trade Widening Rapidly

Big Pacific Coast Distributors Report Demand Growing by Leaps and Bounds—Pipe Trade Also Gaining Ground—Live Trade Topics.

San Francisco, Cal., Aug. 4.—The advertising of the Manila Ad. Agency is producing splendid results. Marx Bros., of San Francisco, national distributors for La Insular, are pleased to report that they find the field widening and the demand growing steadily and rapidly. While the sales of the five cent cigar are heavy, there is a growing patronage for cigars at higher prices by smokers who are particular. Marx Bros. have just landed a million cigars from the S. S. *Cleveland,* and will land two million more from another steamer just leaving San Francisco. The factory, they say, is running at full capacity, so that they find it possible to get enough of the La Insular cigars to supply the trade. Incidentally, the United Cigar Stores are putting in the La Insular cigars.

Similar testimony is given by H. L. Judell & Co., national distributors of the Alhambra. This company has constructed a fine new storage humidor—an immense cement box with temperature and moisture under perfect control—so that they can carry a supply of millions of cigars ready to meet any emergency of the trade, and can keep them in perfect condition and also ripen and improve them. They have recently added new agencies in the South, East, and the Northwest, and find repeat orders growing steadily.

The growth of the Manila trade in the West, strange as it may appear, has been slower than in the East; but the testimony of local dealers is that it is growing. K. Solmonson, a pushing dealer on Market street, recently told of his experience in displaying the Alhambra. He only took a few for a trial, and was surprised to find customers immediately calling for them and coming back regularly, some clients coming for some distance, because they did not know of a more convenient place to get them. So now he is ordering several thousand at a time, and finds there is a certain amount of trade that has a fixed preference for them.

The Merritt cigar store in Oakland also states that they have a good sale for the Fighting Bob, the Alhambra, the La Insular, and several other Manila brands. In the city of San Francisco the Manila preference seems to be well divided between Fighting Bob, La Insular, La Flor de la Isabela and La Flor de Intal, and one or two other brands that are gradually securing placement.

Another trade that seems to be gaining ground in the West is the pipe trade. A. Dallman, representing the Demuth factories in the western distribution, has been thoroughly over the territory, and states that he finds that instead of so often being stuck somewhere in a case, nearly every stand in the country now is taking special pains to give their pipe lines the best possible display, a certain indication that they find it pays. The Duro-bit line with regular bakelite mouthpiece is proving a wonderful seller.

A. Dallman is going East in a few days to visit the Demuth headquarters. He will spend several weeks circulating among the trade in the East, and will beat up the bushes on the way back with a fine line of Demuth pipes, and it will be an unlucky victim whom he does not catch.

Henry Marx has returned from his long trip East on behalf of the La Insular Manila cigar.

Mannie Cohn, the tireless hustler for the H. L. Judell Co., in the Sacramento territory, dropped in for a few days to visit his home firm, and hit the road again to renew his habit of bombarding the home office with orders.

H. H. Manly, of the American Cigar Co., is expected in any day to join Mannie Cohn and help hustle for the placement of the goods of the company.

The campaign of Adolph Judell promises to be a real one for Supervisor, as many friends are coming forward voluntarily who know well the intrinsic worth of the candidate.

The Boquet Cohn chain has added a new link. This time it is in the new Fox Theater building on Broadway in Oakland. Mr. Cohn has secured a long lease in this choice location, and fitted up a very attractive stand.

Tampa Tidings

TAMPA, Fla., Aug. 4.—Notwithstanding the prevailing high prices of tobacco, and the reported scarcity of the finer grades of filler and wrapper, the Tampa manufacturers are assured of sufficient to carry them through the season. The concerted efforts of the manufacturers individually, and the association, to show their customers that it is to their interest to begin placing their orders for fall and holiday stocks early, dividing their ultimate needs into parts, now, and in September, and finally early November, is bearing fruit; and is resulting in the unparalleled gains as shown in the monthly report of sales.

This method assures the dealers of fresh goods, well worked and made—the best workmanship possible. It also enables the manufacturers to anticipate the demand on them, and what is of vital importance, enables them to maintain a steady force of reliable workmen through the unusually dull season.

Formerly many workmen were laid off during the summer. Then the fall rush came on and the manufacturers would be taking on a force of new men and while these men would be in process of breaking in, learning new sizes and shapes, getting settled into those sizes and shapes they were most expert in making, much valuable time was lost and valuable tobacco wasted. Under those conditions, it was impossible to put out as polished a line of goods as desirable.

Dealers Now Co-operating With Manufacturers

There is also another and most important issue to be considered—the financial side as affecting the manufacturers, and the cost of doing business. They have to stock up, in any event, early with their season's supply of tobacco. Their capital is tied up, earning nothing, increasing their overhead cost of doing business, and this added to dearer tobacco and higher priced labor brings their profits near the vanishing point. The dealers are beginning to see this, and are co-operating with the manufacturers to their mutual advantage.

July Returns Show Gains

Tampa's Customs and Internal Revenue offices showed substantial gains for July over the same month of last year, according to figures announced for the month.

Customs House collections for July totaled $196,625.06, or an increase of $30,377.27 over $166,247.79, the total for July, 1922.

In the Internal Revenue office the total collections for July were $353,-656.43, an increase of $71,555.17 over July, 1922, and an increase of $22,220.28 over June, 1923.

Tobacco stamp sales equaled $348,-363.54, showing that 49,934,510 cigars left local factories for consumers during the month. The sales and cigars were divided as follows among the various classes:

	Stamp Sales	No. Cigars
Class A.....	$46,308.54	11,577,130
Class B.....	14,957.49	2,492,910
Class C.....	215,873.33	23,985,920
Class D.....	67,816.58	5,651,380
Class E.....	3,407.60	227,170
	$348,363.54	43,934,510

Havana Tourists Back

Sunday, July 29, saw J. J. French, general manager of Sanchez & Haya, A. L. Cuesta, Jr., and Mrs. Cuesta, Manuel Alvarez and Enrique Pendas returning from Havana. Mr. Cuesta reports that July gave them 38 per cent increase in output, over their best previous July. On Wednesday last Mr. and Mrs. Frank Sierra and Francisco Arango returned from Havana.

"Pancho" Gonzalez of Garcia & Vega has gone to Havana and will join Alvaro Garcia there.

Celestino Vega goes to Havana on the next boat. He also reports a steady increase in their output.

Harry Slavinski of the G & M has recently returned from New York and sails for Havana on the 9th.

Jorge Leon, recently returned from Havana, has gone on to New York. Business with San Martin & Leon Co. is also on the gain. They have just sent out the fourth shipment this year of cigars to China.

Mariano Alvarez, manager for A. Santaella & Co., has returned from New York, and reports that they, also, are booking orders for next winter's trade.

M. Trelles, a prominent manufacturer of the Crescent City, is visiting Tampa, en route home from Havana.

To Settle Tobacco Strike

WASHINGTON, D. C., Aug. 8.—The Bureau of Conciliation of the Department of Labor announced today that Jacob Tazelaar had been sent to help settle the strike of tobacco workers at the Jersey City, N. J., plant of the J. H. Reynolds Co.—LAMM.

CIGAR MANUFACTURERS ASSOCIATION OF TAMPA

Connecticut Valley Anticipating a Record Crop

Many Acres of New Stalk Crop Under Shingles—Priming of Shade-grown Progressing Favorably—Late Set Tobacco Going Strong—Windsor Field Day Successful.

HARTFORD, Conn., Aug. 4.—Favorable weather continues throughout the Valley. Tobacco is responding by making almost a phenomenal growth and today the crop as it now stands in the fields is a far better one than the Valley has produced for a great many years. The wildfire conditions that threatened early in the season checked its spread and does not threaten to injure the crop to any extent now. Occasionally a "calico top" has made its appearance, but these consist of only just three or four top leaves in most cases.

Growers have been following the topping very closely and are seen daily in the fields, as with the tops being left on during a heavy rain the danger of blowing down is great. In a blow-down, much tobacco becomes broken and is more or less damaged, but by removing the heavy tops the danger of tipping over during a rain is lessened and three or four days after the topping the plants seem to clinch themselves in the ground, thus making the danger of a blow-down considerably less.

Harvesting Started

The harvesting of the new stalk crop was started several days ago but was held up three or four days this week due to threatening weather, but the last couple of days has seen many acres safely under the shingles and out of harm. Priming of shade is well along and it won't be long before the first pickings will be sufficiently cured to take down. The help proposition is still a worry to most of the growers and wages are going to be "way up" during the harvest season.

Growers are inclined to top their crops down lower this season than in former years, as they feel that they cannot grow "tops" profitably with the present high cost of production. What the whole Valley needs most now, is favorable curing weather, to follow the excellent growing season and finish out the crop with the cure. Many will "fire" their sheds if the weather goes bad and "pole sweat" conditions start in. The late set tobacco is also taking its place in the race and "jumping" right along, and will be ready to harvest in early September.

Sampling New Tobacco

The work of sampling 1922 tobacco is progressing with the association and buyers are anxious to see the samples as fast as they are ready. Many sales of Broadleaf broken and fillers are being closed every day.

For the most part the tobacco is coming through the cases in a manner very pleasing to the members of the association, and while the Broadleaf growers have had a long wait for the sale of their tobacco, they feel that the old saying, "Good things come to those who wait," is now beginning to come true, and that the marketing plan of the association was their only salvation of getting a fair price for their crops.

From the inquiries received at the main office for Broadleaf, it is expected that as soon as this type of tobacco is ready for sampling, there will be a rush on, and that the entire holding of 1922 Broadleaf will be sold out quickly after the pools are opened. A few cases of the upper grades have been opened to see what the tobacco looked like and it appeared very fine, but not yet dried off enough to sample.

Aims of Association

In a recent address by President Alsop, he said that the aim of the association was to do five things. "We aim to fight speculation, to get a fair profit above growing costs, to insure against hail and fire losses, to sell when the market is ready, instead of flooding the market to everyone's disadvantage, and above all to stabilize the market."

Last Sunday night a fire was discovered in a 300-foot shed of primed shade belonging to Senator Pattison of Simsbury, Conn., which was destroyed, with the building, causing a loss of $30,000, which was covered by insurance. The burned crop was second primed Cuban shade grown tobacco. Although there were two watchmen in the building, the cause of the fire is not established.

Field Day at Windsor

Monday was field day at the Connecticut tobacco sub-station at Windsor, Conn., which is in charge of Director W. L. Slate, Jr., and the Connecticut Valley Tobacco Improvement Association, co-operating under the supervision of Research Director G. H. Chapman. About 350 tobacco growers from various parts of this state and Massachusetts gathered.

Guided by Mr. Slate and Dr. Chapman, who were assisted in their work by Dr. D. J. Jones of the New Haven station in charge of plant breeding, Professor C. M. Slagg of the federal department of tobacco investigation and County Agent Benjamin G. Southwick, the guests toured the fields where various experiments with the different grades and seeds are being made under varying fertilizing conditions.

The plants had just begun to take on a more imposing appearance, due to Saturday's rain. Prior to the storm, it was said, the plants had been rather pinched on account of the long dry spell.

Seed Selection

The primary and some of the second picking has already been done, it was said by Dr. Chapman. "When the crop has been completely harvested," he added, "which ought to be about the middle of September, data will be secured and seed selections will be made. The seed will be bagged to eliminate the possibility of crossing. Those growers who then know what sort of seed they wish will be able to obtain an ounce or so from us for planting next year."

Among the visitors were Dr. P. J. Anderson, director of the Massachusetts station; A. Stabler, general manager of the Porto Rico-American, and W. R. Israel, buyer for the same company.

Tobacco Conditions in the South Carolina Belt

Auction Markets Opened August First—First Three Days' Sales Total Four Million Pounds—General Average Ten Per Cent Over Last Year—Many Markets Shake Off Shackles of Co-Operative Marketing.

MULLINS, S. C., Aug. 3.—As scheduled, the auction markets of the entire South Carolina Belt opened for business Wednesday. No stump speakers and politicians representing the auction people were present. None were needed. The farmers were on hand with their tobacco, which they desired to be sold for cash and not for promises. Just plain business men in the shape of buyers were present, representing all the tobacco companies. They were not versed in oratory and knew not the ethics of camouflaging. They came to do business and not to "make talk."

The sales opened as heretofore at 10 o'clock sharp—double sales being run. The writer has attended many of the opening sales in Mullins. He never saw the farmers any better pleased. No tags were turned. Heavy rains the day preceding held back many loads intended for the opening day, but they came the next day as the second and third days showed an increase in the pounds.

The first day's sales at Mullins were found to be 92,000 pounds. Fully 80 per cent of the offerings were primings. A few piles of good tobacco. These sold readily at from $42 to $64. The general average for the first day was $19.56. Last year's first day's average was $17.80. Some of the low common grades sold for 50 per cent higher than last year—others 25 per cent higher, others 10 per cent higher, others at the same as last year, making the general average about 10 per cent higher than last season.

At Dillon, Fairmont, & Other Points

In the afternoon we drove to Dillon, just a short distance from Mullins, and found the same conditions existing there—around 90,000 pounds sold. Getting in touch over the phone with Lake View, we found the two auction houses there had good receipts. They claimed to have sold it higher than Mullins.

At Fairmont, N. C., one of the five million pound markets of the South Carolina Belt, that draws a great deal of its trade from the famous Indian Swamp section, that always produces good tobacco, we found the two auction houses there had sold for the day 180,000 pounds. Much of the tobacco there was sold in "leaves" due to the scarcity of labor, but the sellers expressed themselves as well pleased.

Getting in touch with Nichols, Marion, Florence, Whiteville, Loris, Conway and other auction markets on this side of the Big Pee Dee, we found all of them reporting sales running from 10,000 to 90,000 pounds, the general average around the Mullins quotations—some of them a little lower, some a little higher. Summing up we found the average this side of the Big Pee Dee to be around $19.60.

On the Other Side of the Big Pee Dee

Our representative, returning from the other side of the Big Pee Dee over which Lake City is the "King Bee," reports the crop earlier in that section and for that reason many of the offerings were of the better grades. The general average, therefore, showed higher by around a dollar than in the "This side of the Pee Dee River section."

At Lake City on the first day around 190,000 pounds was sold. At Kingstree around 200,000 pounds. At Timmonsville, S. C., "blocked sales." Sales estimated there at 300,000 pounds.

Each Day Shows an Increase in the Auction Sales

To sum up, although the auction markets of the South Carolina Belt have been open at this writing only three days, yet each day shows an increase in the size of the receipts. A conservative survey of the three days brings the auction sales up to four million pounds.

We understand that although the co-operative people have been open since July 17 with full and plenty of managers, graders, circuit riders, clerks and the great army of men it takes to handle tobacco, yet their receipts have been very light.

We did not find the quality of the tobacco in the South Carolina Belt as good as we were led to believe it was. While much of it will be of good quality, yet not much in quality over last year. In quantity we estimate the production 25 per cent larger or around eighty million pounds.

Auction System Prevails

Right here we hear some one remark who is reading this article, "Well, Mr. Tobacco Farmer, you haven't said much about the co-ops." Did you catch, Mr. Reader, what we said about Timmonsville and Kingstree? About the "block sales" at one and the 200,000 pounds at the other?

Maybe you didn't know these two towns went solidly "co-ops" last season and closed up their auction houses good and tight? Well, they did. Why did they open their auction houses this season? Why did they on the very first day of their resurrection have "blocked sales" at one town and a fifth of a million at another? Is it necessary with this natural evidence in front of us to say anything further?

All the argument we could adduce from now until the crack of doom in favor of the auction system and how well it

pleases the farmer could not be as effective as the fact that Timmonsville and Kingstree that went soldily co-op last year, led any markets in the state when they shook off the shackles of the co-ops and got back into the auction columns.—R. W. McFarland.

Danville Crop Showing Great Promise

Danville, Aug. 6.—Glowing reports have been received here by the tobacco interests on the prices which have been paid for the early primings on the South Carolina markets. In some instances the prices have been double what they were at the opening last year. The receipts have been heavy, except at such points where heavy rain has been experienced. Reports from officials of the co-operative marketing organization are also optimistic, though the receipts have been reported as light.

An International Problem

"Co-op" propaganda has assumed an international hue, and there has been some inveighing against the British Imperial Tobacco Co., from the Raleigh headquarters. This note has been struck in some of the meetings of the various locals of the Co-operative Marketing Association in this section.

"Freedom from the British yoke," is the tenor of some of the addresses which have been made and it has even been suggested that the British company be enjoined from doing business in this country. Incidentally, the company has not bought any tobacco from the pool, so it is reported, but in Danville it bought about 35 per cent of the crop sold in the open market here last year, when 28 million pounds was disposed of.

Farm Labor Scarce

The crop in this section is making excellent progress. Timely rains in just the right quantity have tended to develop tobacco in a way to bring new hopes to the farmer. A shortage in farm labor, however, is complained of considerably.—Tetley.

Virginia Tobacco Doing Well

Richmond, Va., Aug. 4.—Last week's rains were worth billions of dollars to the farmers of Virginia, in the opinion of Captain J. J. Owen, of the Department of Agriculture.

It appears that last week's rains were the best and most general throughout the State since early summer. As a rule the tobacco crop has been worked well and is in good growing condition. Most of the first planting has been worked for the last time. The effect of late planting will be largely overcome.

Cheering words now come from the tobacco growers, who were in such depressed spirits the early part of the summer. The acreage in the State is not so large as usual, but the production may yet be creditable, and high prices are expected. The opening in South Carolina has greatly buoyed the spirits of growers in other States.

Normal Prices Expected at Greenville

Greenville, N. C., Aug. 4.—It is just three weeks from the opening of the Greenville Tobacco Market. Everybody is busy with tobacco, looking forward to the day as being of vital importance regarding the prices which mean so much to the farmer. Promises of great prices are not made and only a good average price compared to other seasons can be expected.

With six big warehouses and triple sales, the market can handle more than it handled when it sold nearly 40,000,000 pounds. Gorman's warehouse, which last season was used by the Co-ops, will handle loose leaf this season as formerly. The Co-ops have bought land and are building a receiving house. They handled a comparatively small amount last season.

A Good Crop

Rains may have done some damage to the tobacco in July. There has been much rain and the leaf may be thinner than expected, with corresponding loss of texture. However, a good crop is here and if properly saved, the farmer will be buying more and more cars, perhaps. This means prosperity.

The acreage is estimated at from five to ten per cent above last year, with a better yield per acre. But for the hail and wind, which did great damage in some sections, about ten days ago, the crop is good. The damage from the hail storm is variously estimated at from $100,000 to $250,000; but the crop will be much larger than last year's.

While the general crop in this county is better than in the preceding period, that of many other counties in the Greenville market area is not so good. Pitt had the poorest crop of this section last year, owing to so much June rain. So the improvement of Pitt's crop this year over last year does not indicate a greater crop for the section.

There are also prospects that barn room for curing may be a factor in reducing the crop pounds. If warm, dry weather should prevail during the next few weeks, much tobacco would ripen too fast for handling, as has been the case before. A few years ago a quantity of fine tobacco was ruined on the stalks in the fields for lack of facilities for handling and curing.

Plants Ripen Slowly

Showers have been experienced every day for some time past and some tobacco has taken on second growth, while it is not ripening very fast. This is causing some slowness in curing, and may make the crop a little late. Big sales are not expected at the opening of the market. With the acreage little above that of last year the expected yield per acre is over 600 pounds. Last year's yield was

not over 350. Pitt county's will be above the normal crop if good conditions continue, but there are many factors which may yet reduce the yield.—HENRY T. KING.

Dark Co-op Activities

HOPKINSVILLE, Ky., July 30.—The checks for the second payment to members of the Dark Tobacco Growers' Co-operative Association in the Dark Fired district of Kentucky and Tennessee have now all been mailed.

This distribution is approximately $4,500,000 and is 70 per cent of the initial advance made to the growers this year on their crops. There has been considerable complaint among the members because the payment was not equal at least to the first payment. But the officials felt that in order to adequately maintain their credit, especially in view of handling the 1923 crop, that it was the wise policy to stay within safe bounds as to making loans, and that the 70 per cent was all that was authorized at this time. This explanation was made to the members and most of them accepted it after understanding the circumstances.

Payment Welcomed

This payment has greatly relieved the farmers, and will increase business throughout the district. Each member of the association will get an amount in proportion to the number of pounds and grades he delivered to the association, while each locality will receive its pro rata part of the money. The business men welcome it as much as do the farmers, for it comes at a very opportune time when money is needed in farm work and to increase the general trade tone.

This completes the second distribution in the One Sucker, Stemming and Dark Fired districts. The Green River district has not yet had a distribution because of the comparatively small part of its crop which has been sold. The initial advances have exceeded the amount of sales in that district. But the sales of the Green River tobacco will start in August or September and the tobacco is expected to move rapidly, and just as soon as possible the members there will also receive their second payment.

Clifton Rhodes, manager of the Field Service division, reports the membership campaign in the One Sucker district to be achieving splendid results. Since May 22, when the campaign started, until now, a total of 3,137 new contracts have been taken in that district alone. The campaign will close finally on July 31, after which time no more contracts will be taken in the One Sucker district to control the 1923 crop.

Similar campaigns for members will be inaugurated in the Stemming and Dark Fired districts in the near future. Like in the One Sucker district, these drives will follow closely the making of the second payment to the members.

Growing Burley in Dark District

Considerable attention is being given this year to the growing of burley tobacco in this section, that is, considerable attention considering this is the heart of the famous Dark Fired section. So the question had been raised as to whether or not members who signed pledges to the Dark Tobacco Growers' Association, and who are now growing burley, would be required under their contracts to deliver it to the association. General Manager Hanratty says that they will be so required, saying: "The contract signed by our members covers all types of tobacco. There can be no question about this and we want this point cleared up before the delivery season opens."

The school district locals organized all over the dark district are maintaining a lively interest and activity, even though the weather has been hot and the pressure of farm work has been great. There are now nearly two hundred of these locals organized and they are holding their meetings regularly and with fine attendance. For instance, the Sinking Fork local, in Christian county, recently reported a meeting with forty-five of the fifty members in attendance. Others show up nearly as well and further indication of the interest is given by the frequent merging of two or more of the smaller locals so that the benefit of the increased numbers may be had.

Want None But Farmers on Guard

The tenor of the reports from the local meetings is good, showing the members keenly alive to existing conditions and free with suggestions to the end that the association may be improved and strengthened. They do not hesitate to recommend such changes in the manner of conducting the business as they see fit, among these being a reduction of salaries, having only bona fide farmers as directors, and some even going so far as to suggest that only farmers should be placed in the highest positions, suggestions as to the grading of the tobacco, how it should be handled, the amount of payments to be made, etc. But these are all to the end that the association may be made better and more satisfactory to its members.—M. E. BACON.

Dark Tobacco Growers to Elect New Directors

HOPKINSVILLE, Ky., August 6.—Plans for holding the coming election of directors for the Dark Tobacco Growers' Co-Operative Association of Kentucky and Tennessee, have been perfected, and have been announced by the committee. This will be the first election of directors, and by them of offenders, since the association began to function last November.

Deep interest is being manifested by the membership, and the election promises to be productive of much activity among those seeking certain ends. Already this activity is apparent, and it is probable that several new faces will be seen when the new board comes together for the first time.

One thing which will naturally bring this about is the recent decision that no director can hold any other salaried job with the association. Some of the directors are now on the association payroll and, of course, are expected to give up their places as directors in favor of their salaried positions.

The various steps in the election will be held during September, but already the members are being advised as to just how it is all to be done, so that they may become thoroughly familiar with the plan and vote intelligently and for the man they want. Every possible precaution is being taken to safeguard the ballot and to protect it from those who may have designs upon it.

Mass conventions will be held in all counties in the Dark Tobacco district on September 5 to nominate candidates for district delegates. After being nominated, the names of these nominees will be printed on a ballot and mailed the following week to each grower member. This ballot is to be voted on or before September 22. On that day the polls will be open from 9 a. m. to 4 p. m. Also a ballot, in order to be counted, must bear the stamped name and address of the voter at the top. This is the address by which it is to be mailed to him. Or if a member goes to the polling place in person, he can there secure a ballot which will be provided at all the election precincts. This is a safeguard to prevent a possible tampering with the returns by voting in ballots which have been unduly secured or which are not honestly cast.

Each county will be permitted to name one delegate for each million pounds of tobacco of the 1922 crop delivered to the association, and for each majority fraction of a million pounds. This is exactly the same procedure as was followed last year in naming the first board of directors.

In addition to nominating the delegates, each county mass convention will also name four election officers to serve at each general voting place on September 22. These officers will have charge of the election and when the polls have closed will count the vote.

All ballots mailed to the grower shall contain twice the number of delegate nominees as are to be elected, and each member will vote for only half the number of names on his ballot.

The district delegates chosen at the election on September 22 will meet on September 24 in that county of the district which delivered the most tobacco to the association out of the 1922 crop, and at that meeting they will choose a director for the district.

The same plan in this respect will be followed in all of the twenty-three districts in the territory covered by the Dark Tobacco Association. Then in turn the new directors will meet at a date not yet announced and will select the full board of officers, from general manager down through the list, to serve for the ensuing year. The districting of the territory preparatory to these elections, has not yet been completed, but will be announced at an early date.

The next meeting of the present board of directors will be held at Hopkinsville on August 14. This will be the first regular meeting of the board held here in some time, as the directors have been meeting at various points throughout the dark tobacco territory, to get into closer touch with the people and to familiarize themselves at first hand with local conditions.

At the meeting here, some drastic changes will probably be proposed, among which will be a scheme to divide the present Dark Fired district into two separate and distinct sections. As it is now, the Clarksville, Hopkinsville and Springfield sections are in the same pool with the Western District. The former sections produce a higher grade of tobacco which sells more readily and at better prices than that west of the Tennessee River. This is responsible for the agitation for a division which is being pushed by the eastern part of the territory.

Those urging a division claim that it is unreasonable that their money should be held back because of the slower sales in the Western district, and that when a payment is made the amount is reduced because of having to share it with the less favored district. This was brought up at the July directors' meeting held in Clarksville but was deferred for definite action, and the argument over it promises to be prolonged.

There is also a demand from some sources for a realignment of the duties of the various officials, especially the general manager. Those favoring this change want the general manager to have full authority in practically every respect, such as sales, contracts, the receiving and handling of tobacco, the hiring and dismissal of employees, etc.

The opening gun in the Green River drive will be fired in Crittenden county on August 14 and 15, and will be followed with vigorous work in Webster county on August 16 and 17, in Union county on August 21 and 22, in Henderson county on August 28 and 29, and in Hopkins county on August 23 and 24. The co-operation of the bankers, business, and professional men, will be asked in these campaigns and is expected to be given.

The drive in the One Sucker district, which closed finally so far as the 1923 crop is concerned, on July 31, was an even greater success than was expected. Complete figures are not yet to hand, some of the counties not having sent in their final reports, but the number of signers to-date is approximately 5,000 and the acreage is about 13,000. This is regarded as splendid, and indicative of the feeling of the people generally, after watching the work of the association through its first year. The same favorable sentiment is expected to be met in the other sections of the dark tobacco district, and a great increase in the association membership is anticipated.—M. E. BACON.

New Wendell Corporation

WENDELL, N. C., Aug. 4.—A. C. Monk & Co., Inc., have been operating the stemmery and redrying plant here for the past five years, as a branch of the Farmville, N. C., head office, under the management of J. J. Henderson. Their business has grown very rapidly under the careful and capable management of Mr. Henderson, the many friends of whom will be glad to learn that the Monk-Henderson Tobacco Co. of Wendell, N. C., is being incorporated, and has purchased the Wendell branch of the Farmville incorporation, and that Mr. Henderson will be half owner and general manager.

The Farmville incorporation will continue their interest in the new Wendell incorporation. These people are large buyers and redriers for many large manufacturers, as well as exporters of large quantities of tobacco to several European countries, and keep one or more representatives there during the heavy exporting seasons, thus keeping in close touch with actual conditions abroad in connection with their trade. The new incorporation is making arrangements to handle over a million pounds of tobacco this season and will have buyers on many of the North and South Carolina markets.—J. C. COLLINS, Secretary, Wendell Tobacco Board of Trade.

Paducah Prospects

PADUCAH, Ky., Aug. 4.—Practically all of the 1922 crop of loose tobacco has now been delivered. Deliveries during the past week have been just a scattering load occasionally that amounted to very little. Weather conditions have been very favorable for the handling of loose tobacco and if there is any left in farmers' hands it is so little that it will not affect the total receipts. Enough has been delivered for us to make a report of the '22 crop which fell a little below our estimate of 90 million pounds for the western district.

Sales Light in All Grades

There has been considerable inquiry during the past week for lugs of all grades and a few small sales have been made, but the stocks of lugs are so small that transactions were of little importance. Prices, though, have stiffened up on the low and common grades materially, but they are practically exhausted and have been for some time. There have also been some small sales of leaf, of low and common grades, at prices ranging from 12 to 20 cents, but sales have been light in all grades.

Ideal Weather for Crop

The weather for the past week has been ideal for the growing crop and farmers generally have the crop in fine shape. The growth of the plants never was better. They are stocky and heavy, and will make a heavy yield and good quality if weather conditions continue favorable and farmers continue the cultivation and care of their crop from now on until the crop is harvested and cured.

Light rains have been scattered over the district, which is just what the crop needs, and we are hoping for a continuation of good weather conditions. It is to be hoped that farmers will use care with their crop and let it get thoroughly ripe and cut it at the proper time and cure it properly. If this is done we have a chance of making one of the best crops that was ever grown in this district.—W. B. KENNEDY.

James M. Couts

SPRINGFIELD, Tenn., Aug. 4.—James M. Couts, prominent Springfield tobacco man, passed into the great beyond last Wednesday. Death followed a stroke of paralysis. He was making minor repairs on his automobile when stricken. He was a member of the board of directors of the Springfield Bank and served as vice-president of that institution for a number of years.

In 1914 Mr. Couts formed a partnership with W. H. Simmons. This concern, operating under the name of W. H. Simmons & Co., one of the largest buying concerns in the dark district. They operate plants at Springfield, Hopkinsville, Clarksville, Russellville, Greenbrier and other points. This firm also operates the Farmers Warehouse Company and a loose leaf sales floor in Springfield.

Morocco Tobacco Monopoly Reports Progress

WASHINGTON, D. C., Aug. 8.—Sales effected by the Tobacco Monopoly in Morocco (*Societe International de Regie Cointeressee du Tabac au Maroc*), during 1922, amounted to 3,366,866 pounds as compared with 3,262,600 pounds in 1921, according to information received from Commercial Attache Chester Lloyd Jones at Paris.

The receipts of the monopoly during 1923 were 18,265,808 francs, of which 5 per cent, or 913,290 francs, was carried over into the special reserve and 12,787,014 francs were paid over to the Moroccan Government, in accordance with the terms of the agreement of 1910, when the corporation was given the monopoly rights. A dividend of 152 francs per share was paid to stockholders. The net revenue of the corporation during the year 1922 was fixed at 193,542 francs.—LAMM.

Owensboro Outlook

OWENSBORO, Ky., Aug. 4.—While we have had no general rain during the week, there have been local showers which have reached nearly all parts of the district. This condition, together with warm weather, has been beneficial to the tobacco crop, and I am pleased to report the outlook fair at this time.—J. S. PHELON.

Crop Makes Good Showing

SWEETWATER, Tenn., Aug. 4.—An inspection of the tobacco crop of Monroe county was made last week by a party of tobacco buyers, under the direction of the county agents. Several sections of the county were visited and the buyers declared that the crops are among the best that they have found in east Tennessee.

New Fleck President

READING, Pa., Aug. 4.—David A. Sulkis has been elected president of the Fleck Cigar Co., of this city. Mr. Sulkis has been associated with the Fleck Cigar Co. for about fourteen years, having started with the firm as a traveling salesman. In this role he became well and favorably known in the trade and built up a substantial following on his company's brand, the Rose-O-Cuba cigar.

THIS IS A PORTO RICAN TOBACCO YEAR

No matter what the wrapper may be—Sumatra, Havana, or Connecticut shade-grown—unless the cigar has the right Tobacco in the filler it will not satisfy the discriminating smoker.

No longer is it necessary for a manufacturer to misbrand his product as "A Mild Havana" for the smoking public is gradually realizing that the ideal, mild, fragrant cigar which it has learned to enjoy invariably contains Porto Rican Tobacco either exclusively or blended with other high grade Tobacco in the filler.

This year the crop of this Island is of almost uniform excellence while that grown on the uplands of the interior is said by experts to equal in quality the Tobacco grown in any part of the world.

Manufacturers who have studied the taste of the average American smoker are using Porto Rican Tobacco in their cigars and reaping the reward in their popularity—if you happen to be one of the few who don't, now is the time to start, for

This Year It's Porto Rican Tobacco

Celebrate Pool Drive

SMITHS GROVE, Ky., July 28.—Town and county joined hands here today in joint celebration of the success of the sign-up campaign of the Burley and Dark Tobacco Co-operative Associations with the merchants of Smiths Grove as hosts to the farmers of Warren, Allen, Barren and Edmonson Counties at a barbecue in which more than three thousand participated.

Though the occasion was primarily intended to show the approval of the townspeople of the tobacco pooling movement and to celebrate the success of the drive which has been in progress here for several weeks, many tobacco growers who had not signed previously took this opportunity of becoming members of the Co-operative Marketing Organizations.

Many Contracts Signed

Contracts to the number of 93, aggregating 227 acres, were signed today. Most of the solicitors in the crowd were local persons, as the marketing organization was represented only by two field workers. Lawrence Finn, Franklin attorney; J. Guthrie Coke, of Auburn, executive committeeman of the Dark Association; J. D. Craddock, Horsecave, director of the Burley organization; P. M. Day, Russellville, director of the Dark Association, were the speakers. Mr. Finn, who was formerly chairman of the Kentucky Railroad Commission, spoke. He urged on the growers present the necessity of an economic union to meet the economic organization of forces adverse in interest to the farmers. Success in co-operative marketing, he said emphatically, depends on the loyalty of members of the organizations and to the principle of freedom from hatred and rancor, and on a clear headed, cool analysis of the problems of marketing. The speakers recalled to the members of the association the "ruinous" manipulation of the tobacco market before the organizations were proposed and described benefits derived from a stabilization of tobacco prices. He showed how towns in agricultural counties will profit from a stabilized price and said that he voiced "the sentiment of the merchants in Smiths Grove in declaring that the successful operation of the two tobacco associations held forth the promise of a golden future and that their past performances had been the fullfilment of such a promise."

Frank W. Crump, local chairman, announced after a check on the sign-up and the production in the territory tributary to Smiths Grove that the percentage pledged to the Dark Tobacco Association lacked but little of 100 per cent and that the percentage pledged to the Burley Association was nearly as much. More than 41 contracts were signed today by A. T. Crump, while another local man, D. A. Boles, was responsible for 20 signatures.

Mr. Coke spoke briefly on the successful record of the Dark Tobacco Association, producing official figures to back up his statements that the tobacco growers had a better chance of prosperity inside the organization than out. Mr. Craddock told of the satisfaction "which is general among Burley growers."

Match Imports

WASHINGTON, D. C., Aug. 8.—There were 135,307 gross boxes of matches imported into the United States during May, according to figures made public by the Department of Commerce. Of this quantity the largest came from ond largest quantity from Sweden, 36,- Japan, with a total of 39,550. The sec- 590 boxes.—LAMM.

Pennsylvania Crop Improves After Rainfall

Good Tobacco Weather Works Miracles With Growing Lea —Heavy Yield of Finest Quality Tobacco Anticipated— Japanese Beetle Feared.

LANCASTER, Pa., Aug. 6.—Somebody knows exactly what the status of the Lancaster market is going to be when the 1923 Pennsylvania starts on its way to the warehouse. Who he is, we do not know, but the variety of forecasts made by a number of representative tobacco men cover every conceivable situation and one of them, perforce, must have prophesied truly.

There were those who predicted that the demand for 1923 Pennsylvania would be unprecedented and that good prices for the cigar leaf would prevail. These based their opinions on the favorable business outlook and the fact that Pennsylvania is steadily gaining a larger place in the smoker's favor. The outcome is plainly evident, they declared, and with the materialization of brisk fall and winter business will come the demand for Lancaster grown tobacco.

Prices will not go higher nor will they even be on a par with those of last season, stated another tobacco man, who saw less demand for the 1923 crop than was evidenced for the 1922. He reasoned that the heavy buying by large manufacturers last spring was a good indication that they intended to "lay off" this year and that low prices would come as a natural result. Similar prophecies were forthcoming from other quarters and, while there was quite general conviction that the smoker would continue to find Pennsylvania filler much to his liking, the surplus on the hands of the manufacturer, these packers believed, would prohibit a recurrence of the price paid for the 1922 crop.

Then there were several of the conservative group who saw nothing at all unusual, either for better or for worse, in the present season, and opined that events would very smoothly run an uneventful course and that prices would be neither good nor bad. Demand for Pennsylvania there was, of course, admitted those who adopted the middle ground, but the supply, they pointed out, was well equal to the occasion and would meet the requirements of the manufacturers very nicely and without undue strain either one way or the other.

A number of variations were played upon these three main themes by other tobacco men and let the situation be what it may this fall, it will find at least one or two packers prepared and expectant.

Certain it is that the crop will be a good one. A week of very good "tobacco weather" has worked miracles with the growing leaf which had withstood none too well the rigors of the drouth. "You can see it growin'," exclaimed one jubilant grower after the third day of cool, rainy weather, and he was not far from right. The crop has improved a hundredfold during the past week and has nearly, if not entirely, regained the ground lost during the early part of the season. A fine, deep green succulent stand of leaves has taken the place of the erstwhile stunted crop and, with the prospect of fairly good growing conditions throughout August, a heavy yield of the finest quality leaf is to be looked for.

"Jap" Invasion Threatens

Will the Japanese beetle, that tiny insect which has struck terror into the hearts of New Jersey truckmen, evince an appetite for tobacco? This is a pertinent question for Lancaster county growers for the line of advance of the "Jap" is directly toward this section. This latest foreign scourge to visit itself upon American agriculture can do prodigious damage, as has been very well proven in the fields of "Jersey," and might affect the Lancaster tobacco section seriously.

The real danger of this pest is best appreciated by those on the "firing line" who, from their specially built laboratory at Riverton, N. J., are bringing into play every weapon of modern science to combat the invader. The warning to Lancaster county growers was first sounded by them in the following letter to Otto Olson, Federal Tobacco Experimenter, of Ephrata.

"Mr. Otto Olson,
Ephrata, Penna.

Dear Mr. Olson: In connection with the Japanese beetle work, the question has come up several times as to the possible effect the Japanese beetle would have upon the tobacco industry if it became established in a tobacco growing community. In order to determine the possible status of this insect in its relation to the production of tobacco, we would like to obtain some tobacco plants to use in connection with feeding experiments with the beetle.

Very truly yours,
C. H. HADLEY,
Entomologist in Charge,
Japanese Beetle Project.

Mr. Olson forthwith sent the desired plants to Professor Hadley who offered them to his beetles as a substitute for New Jersey vegetables. Should the deadly little insect refuse this diet, all will be well; but should he relish the seed leaf as does his grown-up cousin, the cut worm, then indeed does evil for the tobacco grower portend.

Some short time remains, should the "Jap" advance unchecked, for investigation along the lines of control. If tobacco should prove subject to the ravages of the pest, the advance information proffered by the New Jersey scientists would be invaluable. A very real danger here presents itself and growers, ever on the alert by virtue of their unceasing battle with the insect foes of their crop, are keen to sense its potential seriousness. —KEYSTONE.

York County News

YORK, Pa., Aug. 4.—The announcement was made during the past week of a new cigar factory to be launched in this city on Monday, Aug. 13, which is to specialize in a high-grade ten cent cigar. The firm, which is to be known as the Keystone Cigar Co., will occupy the factory building at the rear of 33 South Duke street, owned by C. I. Taughinbaugh. The promoters of the new company are Sol Rosenbaum, who has been the superintendent for many years of the Bobrow Brothers' factory located on East Jackson street, this city, and his brother-in-law, Joe Shube, who until recently was the superintendent of Bobrow Brothers' factory, Harrisburg. The Keystone Co. plans to give employment to between 40 and 50 cigar makers.

The vacancy caused by the resignation of Sol Rosenbaum as superintendent of the local factory of Bobrow Brothers has been filled by the appointment of S. S. Shultz, of Philadelphia, who assumed his new duties last week. Mr. Shultz was transferred to this city from Conshohocken, Pa., where he had charge of a large factory for the same firm. The local factory employs about 200 cigar makers.

Improvement during the past month in the cigar business in York county is indicated by the receipts from stamp sales for July at the York office of U

D. DREUX, Inc.
Successors to Wm. Quanjer, Inc.
Importers of Sumatra and Java Tobacco
Telephone John 2709 136 Water Street, New York

S. Internal Revenue. The total stamp sales, according to the tabulation made by Thomas Black, a field deputy of the Philadelphia office who is in charge of the stamp window during the temporary absence on vacation of George C. Enders, amounted to $221,861.43, which is $2,-855.57 more than the month of June, which brought in receipts from this source of $218,905.86.

The July receipts were, however, $1,-722.86 less than the receipts of July, 1922, which were $223,584.29. The receipts from tobacco stamp sales the past month amounted to $8,917.02, which is a drop of $1,630.81 from June receipts, which were $9,547.83. The July figures are, however, higher than the same month last year, which brought returns of $8,689.50.

Captain Minnich Passes Away

Captain John W. Minnich, former Internal Revenue collector, who was in charge of the office at York for eight years, died on August 3 at his home in Wrightsville, 12 miles east of here, after an illness of three weeks. Death resulted from apoplexy. He was 75 years old. The deceased was an ex-chief burgess of Wrightsville and a captain in the old Pennsylvania National Guard. At the time of his death he was the general manager of the Riverside Thermometer Works of Wrightsville.

B. S. Sentz, superintendent and manager of the Consumers Cigar Box Co., Red Lion, crushed both his heels in a peculiar accident at the box factory. He was assisting in lining the inside of the office and was standing on a stepladder using a chisel to force the grooves together, when he slipped and lost his hold, falling five feet to the floor. He landed squarely on his heels. It will be some time before he can walk even with the aid of crutches.

A Red Lion Wedding

Arthur M. Meads, son of C. O. Meads, Red Lion, a member of the Meads Tobacco Co., and Miss Erdine Hedrick, who resided with her sister, Mrs. F. M. Wagman, Dallastown, were married July 31. The ceremony was performed in the parsonage of Christ Lutheran church, Dallastown, by the pastor, the Rev. S. L. Hench. Immediately after the ceremony, Mr. and Mrs. Meads left by automobile on a wedding trip through the New England States, as far north as the State of Maine. They will also visit points in Canada. Upon their return in three weeks, Mr. and Mrs. Meads will reside in Red Lion.

The cigar factory of H. J. Roth, Bair, which had been closed down for several weeks because of a lack of orders, resumed operations on July 30.

The cigar factory of Otto Eisenlohr & Bros., in this city, which had been closed for a week in order to take inventory and give several hundred employes a vacation, resumed operation on August 6.

Tobacco Crop Misses Rainstorm

The York county tobacco crop sustained no damage as the result of the severe rainstorm on July 30 which passed over the county and caused a property loss estimated at $100,000. The tobacco growing section is south and east of York, while the fury of the storm was spent upon the northern and western sections, where there were cloudbursts which, preceded by steady rain, caused streams to overflow their banks. While there was no loss of life, there were a number of thrilling rescues and farmers will sustain a heavy loss from the destruction of crops and cattle.

The employes of the D. Frank Kaltreider Cigar Box and Lumber Co. of Red Lion held an outing on August 4 at Hershey park, near Harrisburg. The trip was made in touring automobiles. Dinner was served on the grounds.

Baltimore Market

Prices Are Strong

BALTIMORE, Md., Aug. 2.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND.—We have to report for the past week receipts of 1,673 hogsheads, against sales of 1,145 hogsheads. The market very active with prices strong.

OHIO.—Receipts 82 hogsheads, with sale of 1 hogshead.

Association Data

The Leaf Tobacco Association of Baltimore city issues these statistics for the week ending Aug. 1:

Co.-op. Shareholders Lose

GREENEVILLE, Ohio, Aug. 4.—Frank Sellers, who was appointed receiver of the Farmers' Co-operative Cigar Leaf Tobacco Co. at Verona, has filed his report in the Preble county Common Pleas Court. Sellers was appointed receiver of the company located at Verona, some months ago, and he has sold the property of the company, paid claims and has a small sum on hand for distribution to the stockholders.

The report shows that the receiver received $6,759.08 from the sale of assets of the company. Of this amount $6,000 was received from the sale of realty owned by the company. The receiver paid claims amounting to $5,769.28, leaving a balance of $989.80 to be distributed to the stockholders. The paid up capital of the company amounted to $6,125, represented by 245 shares of capital stock of a par value of $25 a share. The balance of $989.80 was distributed back to the stockholders on the basis of $4.04 on each $25 share of stock. The stock was held in amounts ranging from one to twenty shares each.

The suit seeking the appointment of a receiver was filed by Jacob Hoff, H. H. Murray, C. C. Cromwell, Jesse Hapner, L. M. Ressler and Herman Snorf, directors and officers of the company, who alleged that at the time the petition was filed the property was not in use and the company had not functioned for a year previous and had failed to pay taxes and other claims.

Philadelphia Industry Active Despite Dog Days

Big Cigar Factories Going Ahead With Production—Handicapped by Vacations and Hot Weather Inefficiency of Workers—Demand Better Than Month Ago.

PHILADELPHIA, Aug. 7.—Dog days in Philadelphia, now at their height, find no cessation of production in the big cigar factories, save as it is caused by the vacation period and the reduced efficiency of labor. Orders from mid-west and even extreme west are steadily increasing; the southern market is growing. What the trade finds of particular charm about the situation is the desire of distributors for immediate shipments, indicating that the market is well cleaned up and giving, to that extent, assurance of continued activity throughout the remainder of the summer and until the fall. On the whole July passed into cigar manufacturing history in the first rank of Julys of recent years. These conditions observed during the week are confirmed in the statement just issued by the Philadelphia or Third District Federal Reserve Bank, which follows:

Cigars and Cigarettes

"The majority of cigar manufacturers report that the demand for cigars is good and better than it was a month ago. A few state that sales this month have not been as large as they were last July, but most makers, particularly specialists on Class C and Class D grades, report that they are larger. The big producers of nationally advertised brands have increased their production over that of last month, and the average of operations in their factories is from 85 to 90 per cent of capacity. Small producers of Class C grades, too, are busy and are working at close to capacity; but the small manufacturers of 5 and 8 cent cigars are operating at only about 70 per cent. Practically all orders are for prompt shipment, as none of the manufacturers reporting to this bank have orders booked for shipment beyond 90 days. Producers of American cigarettes report a large increase in orders as compared with a year ago, and most factories are operating at close to capacity. Manufacturers of Turkish cigarettes state that although the demand for their products is only fair, on the whole it is much better than it was in July, 1922. The Turkish cigarette factories in this district are working at about 65 per cent.

Cigar Prices Firm

"Prices of cigars are holding firm, and during the month there have been no changes in manufacturers' prices in this district. Tobacco leaf is also strong, and many sales of Java, Havana and Porto Rican leafs were closed at prices from 20 to 35 per cent above those of a year ago. Likewise, cigarette prices are firm. Manufacturers' stocks of cigars are moderate and are remaining stationary. In general, they are not as heavy as they were a year ago. The supplies of tobacco leaf held by cigar manufacturers are larger than they were a month ago, owing to the arrival of the 1922 Java and Sumatra tobaccos; but total stocks are by no means heavy.

Labor Supply Adequate

"The supply of skilled workers is still adequate to meet the needs of cigar makers, although it is not so abundant as it was last month. Some scarcity of unskilled labor is noted, but in general unskilled workers are more easily obtained than during the two preceding months. No changes in wages are reported.

"Collections vary from fair to good and are slightly better than they were in June."

New El Producto Distributors in Virginia and Adjacent States

By reason of retirement from the cigar business of the Straus Co. of Richmond, Va., distributors in that territory for the G. H. P. Cigar Co., whose leader is El Producto, appointment of a new representative has been announced, following the return from a successful southern trip of President Benjamin L. Grabosky and General Manager Frank T. Will. The new agent is the Cliff Weil Co. of Richmond, Va. The Straus Co. will concentrate on the hotel supply business though it has discontinued cigar distribution. The Cliff Weil Co. is the largest distributor exclusively of cigars in the territory. The new concern will cover the same territory as that of the former distributor.

In Big Demand

All the production possible by the Marshall Field Cigar Co., 127 North 7th St., on its new Invincible size has been exhausted by the demand in New York State, where recently it was introduced. This new size, wrapped in foil and packed in 40's, was only introduced a fortnight ago but sales have been so thoroughly encouraging that production is to be increased as soon as possible. It retails at 15 cents and has the same combination as the Marshall Field family, and like them is Java wrapped. President Howard F. Pent is now on a trip through the west, where he will introduce the new size during the next two weeks.

Increasing Capacity

The local factory of the Kilfeather Cigar Co., selling mainly in the New England territory, and which is located at 37 North 7th St., under the Hyperion Cigar Co. title in the building formerly occupied in part by the Halpern Cigar Co., recently took over the entire three upper floors and now occupies the entire structure, save for the first floor. With the increased space a production threefold as great as that formerly enjoyed now is being utilized. The Kilfeather branch was opened in the Quaker City a little over two years ago, and its demands have so increased that greater facilities were imperative.

Increasing Bellfair Production

Increase of production by at least 100,000 daily is the goal set by Louis Stern, local manager of the B. G. Davis & Co. plant, at 306 Cherry St., whose products are all sold through the Shulte chain stores. The force of employes is being steadily increased. Production in the local factory is concentrated on the Bellfair brand.

Louis Halpern, formerly of the Halpern Cigar Co., which lately was dissolved, has entered the leaf trade, with headquarters at 103 North 4th St., and is trading as the Halpern Leaf Tobacco Co. Associated with Mr. Halpern is his son, Joseph Halpern.

Samuel Olster, who is part owner of the Ruyera Lopez Co., 137 North 3rd St., has taken personal charge of the retail store at 1303 Market St., adjoining the National Drug Co. and connected with it. He is also looking after the outside sales of Ruyera Lopez brands for the factory. Production at the factory is supervised by George Goldstein.

Representative Edward M. Laing of the P. C. Fulweiler & Bros. Co., 927 Sansom St., is back from a most satisfactory trip through the Virginias and

Tennessee with the firm's leaders, Lew Wallace and Little Lew. President Harry M. Norton is spending the summer in Atlantic City.

Because of oversold conditions and inability of production to keep pace with demand for Philadelphia Club, President A. A. Gumpert of Gumpert Brothers, Inc., 207 Market St., had to return from his western trip. Owing to the concentration of production in the Tampa factory on Philadelphia Club brand, there has been curtailed output of La Morena, but greater production will be resumed as soon as conditions make it possible.

Louis M. Cohen, head of the Della Casa Cigar Co., 110 North 2nd St., has just returned from a trip to the Chicago headquarters at 231 North Wells St., which is now a distribution point for the middle west. During the week he paid a visit to the New York trade looking after the sales of El Predomino and Della Casa.

Federal Production Grows

Production at the Federal Cigar Factory has now grown to 40,000 per week and is making steady increase. Gain has been on both the Exponent and Moro Castle, but particularly on the latter, which is a 10 cent proposition added to the line a few months ago. Maurice Balis is now traveling throughout the state, the factory being in charge of his partner, Lewis Faerstein.

George I. Watson, who is representing the newly organized Associated Cigar Manufacturing Co., 1039 Race St., on the road, has again left for a trip to the central section of New York state after a month's stay at headquarters. The sales of Dependo and Rey Oma, both long established brands recently included in the firm's production, have made rapid sales advancement under the new owners.

Co-operatives Issue Glowing Reports

RALEIGH, N. C., July 30.—The Tobacco Growers' Co-operative Association has sold all but 28,000,000 pounds of the 163,000,000 pounds of tobacco delivered by its members last season, according to the recent announcement of Richard R. Patterson, leaf manager for the co-operative association.

Several million pounds were sold by the association during July and prospects for further sales of the association's re-dried tobaccos are excellent, according to Manager Patterson.

Deliveries to the co-operative warehouses in South Carolina are increasing daily, as the organized growers continue to receive cash advances which are far in advance of those paid last year and are more than the prices paid for many grades on the South Carolina auction markets in 1921.

Co-operative marketing of tobacco by Canadian growers has been highly successful, according to a letter received this week by M. O. Wilson, secretary of the organization of the Carolina-Virginia growers, from John Maghill, president of the Canadian Tobacco Growers' Co-operative Co., of Ontario, Canada. President Maghill writes: "The prices received by the growers of flue tobacco in the year 1920 through the company were from 22 cents to 38 cents per pound; 1921, from 25 cents to 43 cents per pound, and 1922 from 27 cents to 51 cents per pound. The prices quoted are for the tobacco received from the farmers on the inbound weight.

"Prices for 1920 and 1921 equal prices paid to the outside grower and the 1922 prices are from 3 cents to 9 cents per pound more than was offered by the buyers for the same tobacco."

The Kentucky Burley Growers, according to the latest reports, averaged 9 cents per pound more in their first year of organization than they had received for their 1920 crop when unorganized. In 1922, despite an increase of nearly 100,000,000 pounds in the yield their crop was sold at about 9 cents more than the 1921 crop.

History repeats itself in co-operative marketing and the increased advances paid by the Tobacco Growers' Co-operative Association as it begins its second year of marketing has given its members renewed confidence in the complete success of their plan.

A list of prices posted in all association warehouses throughout the South Carolina belt, with comparisons of the 1922-23 advances, is as follows:

Growers to Meet

TROY, Ohio., Aug. 4.—A general meeting of the Miami Valley Tobacco Growers' Association will be held in Grange hall, Aug. 9 at 12:30. H. S. Marvin, one of the leaders in the Kentucky Burley Tobacco Growers' Association, will be the speaker. He will tell of the organization of the association in Kentucky, the benefits derived therefrom and the connection between such an organization and local merchants and business men. He is reputed to be a national authority on tobacco marketing. The Miami county district of the Valley association has not yet been completely organized. A constitution and by-laws have been drawn up and two directors, Harry Shaefer of Concord township and Harry Ammon of Union township, have been elected from the county.

Connecticut

(*Continued from page 23*)

During the week the local tobacco buyers have been scouting around to locate the crops that were not in the association and many sales are reported to have been made on a bundle base contract. All the Havana of the "independents" is now reported to have been picked up at prices ranging from 46, 48 and 50 cents per pound and in the Broadleaf belt prices range around 50 cents or better, bundle basis.

It is understood that the wildfire and pole sweat clauses are not included in the contracts, and that everything as stripped from the stalk goes into the bundle. The buyers reported as buying are the American Sumatra Tobacco Co., Meyer & Mendelsohn, I. Kaffenberg & Sons, Hinsdale, Smith & Co., and others.

Early buying has not been done for several years and since the forming of the association, now just one year old, the buyers seem ready to contract for crops at a "living" price, and assume some of the hazards of the business themselves. With the prices as reported paid for the 1923 crop, indications are that the trade are now willing to pay fair prices to the growers in order to get tobacco for their own trade.—NUTMEG.

San Francisco

(*Continued from page 20*)

United Cigar Store Destroyed

The United Cigar Store at Sacramento was completely destroyed recently when the hotel building in which it was located was destroyed by fire. Only the sign was left.

Dan Whelin, in charge of the fine General Cigar Store at Fourteenth street and Broadway, Oakland, has just returned from a wonderful trip to the Yosemite, with pep enough to sell all the cigars in Oakland.

The Samuels Cigar Stands in Oakland report an excellent growth in trade. And part of this they attribute to the growing patronage of the ladies. The day has gone by, they say, when a lady hesitates to step into a cigar stand to get the cigars or tobacco her husband wants. Our stands have ceased to be loafing places for a crowd which a lady feels obliged to shun.

United Preferred Dividend

United Cigar Stores Co. of America have just declared the regular quarterly dividend of 1¾ per cent on the preferred stock, payable September 15 to stock of record August 30.

A WEEKLY TRADE REVIEW

ESTABLISHED 1886

Vol. LXXVI. No. 16 NEW YORK, AUGUST 16, 1923 Per Annum, $3.00 Per Copy, 10 Cents

Wisconsin 1923 Being Sought by Two Big Buyers

Representatives Said to Be Paying Rather Fancy Prices for Promising Crops—Good Binders Not Easily Found—Weather Has Been Extremely Unfavorable.

EDGERTON, Wis., Aug. 12.—Representatives of C. H. Spitzner & Son, and Bayuk Cigars, Inc., are reported to be out after 1923 tobacco, and paying rather fancy prices for a promising crop, when they can find it. It is a long way between good binder crops, and rumor has it that Jenson, Spitzner's man, has hit 27 cents, and Smith has gone higher, in one instance, at least. Neither firm has over one or two buyers out. The crops bought will not amount to much in acreage volume.

Surprise and Disappointment

It was a surprised and disappointed group of buyers that surveyed the northern sections the past week, with the idea of locating the good growing sections, and how the crop in general was coming along. Most reports coming out of the north have been optimistic, but in practically all were found to be valueless.

Gloomy Outlook

The writer can state authoritatively that the northern crop of 1923 is surely a dry one, at least up until two days ago. Hard riding over many different sections yielded nothing but dismal views of wilted, parched tobacco, often seared with the same yellow tinge of wilted corn. One county after another, the view was the same, except a few rare streaks where local showers had furnished a little temporary moisture, and the drouth was set back a few days.

Kickapoo in Best Shape

In the Kickapoo Valley, the conditions were perhaps the best, with Crawford County in perhaps the best shape. In Minnesota the moisture was also entirely absent. Only once in a very, very great while is there a crop showing any promise. Much rain is everywhere needed, else there will be a lot of short tobacco this year. There are only a few isolated crops that will make a spread without rain.

Some Much Needed Rain Comes

It will be a terrific disappointment to the buyers who bought so early if copious, soaking rains are not forthcoming soon. General rains were enjoyed yesterday in the southern sections. One report from Crawford County today said it was raining nicely as the report was being made up there. If that is so, and the rain is general, it will come in time to save many of the wilting crops in the north.

South Gets Good Rain

In the south, conditions are better, although perhaps forty per cent of the growing areas are suffering a severe drouth. A good rain yesterday broke it in some sections, but there is no area in the south, even, that would not benefit from rain.

Few Scattering Binder Crops

There are many scattered crops in the south, however, that give promise of being as fine binders as has been produced in years. In the main, however, the stand in the south is uneven and slow, and with all promises of yielding a lot of stemming stock, for the ever greedy stemmers.

Panaceas Become Inert

More rifts are being seen in the more or less artificially welded Farmer-Labor bloc. The Wisconsin farmer is disgusted with the Minnesota and the Dakota idea of a stabilized price for wheat. He is making himself heard concerning it. He has struggled to make his farm a twelve month producer, like a manufacturing establishment, and is bucking constant worries like freight and taxes. His diversified products are being marketed throughout the year. He has built up fine herds of graded cattle, and thoroughbred cattle. He furnishes the "where-with-all" for a swarm of big and little condenseries, fruit and vegetable canneries, packing plants, creameries, poultry, eggs, fruit, and garden truck and staples, and also the big staple crops like corn, pork, beef, wheat, tobacco, and grain of all kinds. He has no good samaritan feeling toward the makeshift 100 per cent wheat farmer, or any other one crop farmer,—or, as he puts it,—"a four months' farmer and weather gambler." And when it hits him in an especially sore spot, such as more taxes, to help peg the price of wheat, his roar is loud and angry. So it is, when the labor wing of his bloc mentions such things as the eight-hour day, and high prices for food staples, etc.

It is merely another cause for head-scratching, and brow wrinkling, when an innocent bystander meditates as to where it is all going to end. The tobacco pool is one wing of it, and the cigar-makers' strike is another wing of it, and so is the wail for a good nickel cigar. A beautiful example of the old saying, "Playing both ends against the middle."—BADGER.

Tobacco Growing in the Ozarks

BRANSON, Mo., Aug. 11.—Tobacco growing is being developed as one of the major farm crops in Taney and Stone counties. According to Dr. E. E. Corlis, one of the prominent tobacco growers of this region, fifteen hundred acres of tobacco has been planted in these two Southern Missouri counties.

Four years ago five acres of land were planted in tobacco by F. W. Robertson, a native Kentuckian. His first crop was so successful that many people were attracted by the possibilities of further developing the crop in this section. Two years ago Dr. Corlis, J. F. Streckland and L. P. Matthews, the latter two men natives of Kentucky, leased thirty-one acres of land on which to grow tobacco. The quality of the tobacco was fine enough to warrant further planting and an average profit of $300 per acre has been realized. This year the same three men have seventy-five acres under cultivation.

Especially Adapted to Tobacco

Dr. Corlis said that this section of the country was especially suited for the growth of tobacco, and that Burley tobacco, which may not be raised in many sections, is adaptable to this soil. He also advocated that 40,000,000 pounds of tobacco would be grown in this section annually, when the crop becomes established in the Ozarks. A new tobacco-marketing plant is now being erected at Branson, which will hold 23,000 stalks. The farmers of this section will haul their tobacco to the plant and it will be distributed and sold to the buyers of large tobacco companies. The crop may be grown with less expense, in this section, and the barns in which the tobacco is stored may be built out of native lumber, saving the farmer money on his building, which ordinarily would have to be built out of shipped lumber.

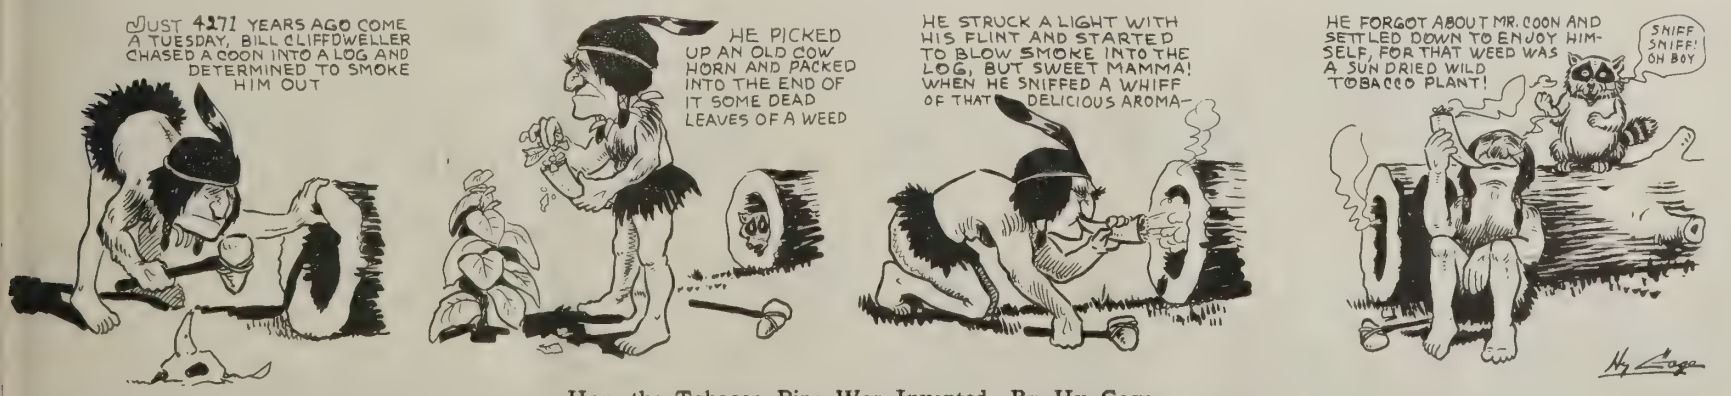
"This section will undoubtedly be one of the greatest tobacco sections in the Middle West, if the same interest in the crop is continued," according to Dr. Corlis.

Competition May Lower Fertilizer Prices

WILLIAMSTOWN, Mass., Aug. 11.—Prediction that the price of Chilean nitrate ultimately would be reduced as a result of competition with nitrogen compounds by artificial means was made in an address at the Institute of Politics today by Harry A. Curtis, chief of the nitrogen division of the Department of Commerce.

Mr. Curtis said that the present high price of nitrogen made it impossible for the American farmer to use enough nitrogen to maintain the fertility of the soil. As the production of nitrogen by means of coal processing and air fixation increases, the Chilean nitrate producers will be forced, he said, to meet this competition and will no doubt improve the economy and efficiency of their production.

The world demand will be so great, however, he added, that it will absorb all the nitrogen that can be supplied from any source.



Edward Wise, Park & Tilford Director

Edward Wise has been elected a director of Park & Tilford, Inc., recently acquired by the Schulte interests. Mr. Wise, who is a member of the firm of J. S. Bache & Co., was formerly president of the United Cigar Stores Co. He expects to devote considerable time to the development of the Park & Tilford business.

A New Twist

LENOIR CITY, Tenn., Aug. 11.—The Burley Twist Tobacco Co., of Knoxville, is putting on the market with local grocerymen and tobacco dealers a fine new twist tobacco, known as the Rogers Burley Twist. This tobacco is manufactured from the burley tobacco grown in this and adjoining counties. Those who are users of twist tobacco cannot do better than to give this new product a trial, for they will thus be helping local tobacco growers to find a market for their product.

This tobacco is made in a union plant, where the union twisters are paid 45 cents per 100 for making the twists, where non-union twisters are only paid 30 per 100. And still it is as cheap in price as the non-union product. This, according to the company's representative, Jesse L. Rogers, of Knoxville, is the only twist tobacco sold locally that carries the union label.

Duys' Havana Representative Confers With Chiefs

Jacob Labe, in charge of the Havana department of H. Duys & Co., Inc., is in New York, conferring with his chiefs, and will not return to Cuba for several weeks. Mr. Labe states that the tobacco purchased by H. Duys & Co., Inc., this season, was grown in the Camajanui, Guayos, Cabaiguans and Sancti Spiritus sections, which are conceded to be the best in the Santa Clara Province.

Liverpool Tobacco Report and Market Comment

Market Comment

The July sales sum up to a fair average, those of Brights and Semi-brights predominating, and of the lower grades of Virginia leaf and strips there are few parcels from which selections can now be made.

The import of western leaf and strips is not sampling up as good as early shipments, much of the tobacco being mixed color and quality.

The question of labor in the United States was ably dealt with by the New York correspondent of *The Times* in the issue of the 7th instant, showing the altered conditions prevailing there, with its consequence upon raising and handling tobacco in that country; preventing a return of pre-war prices.

The crop reports are good in all the tobacco producing states.

Nyasa and other Empire growths have not met with much demand.

Starts New Leaf Business in London

LONDON, Eng., Aug. 4.—J. M. Macmillan, of 30 Minories, E. I., makes the following announcement:

"I have to inform you that I have resigned as a director of, and from all connection with, Frank Watson & Co., Limited, and am commencing business as leaf tobacco merchant and importer under the style of, J. M. Macmillan, Limited, at the above address.

"The cordial relations which have existed between members of our trade and myself I hope will continue.

"Should occasion arise when you think I might be of service please do not hesitate to make it known to me."

Yes, Lucy Page Gaston Was Not Present

NEW CASTLE, Ky., Aug. 11.—The first meeting of the Board of Directors of the Henry County Burley Co-operative was held at the Court House, Mrs. Ben Carroll, county vice-chairman, presiding. Twenty-eight were present, including the following members of the executive commttiee: Mrs. A. R. Garrett, Mrs. Maddox O'Nan, Mrs. J. W. Miller, Mrs. H. K. Bourne and Mrs. Charles Atchison. Each local reported election of officers as follows:

New Castle—Chairman, Mrs. M. J. Jones; vice-chairman, Mrs. James Sanford; Executive Board, Mrs. J. Wirt Turner, Mrs. Sid Morgan and Mrs. Jap Mays.

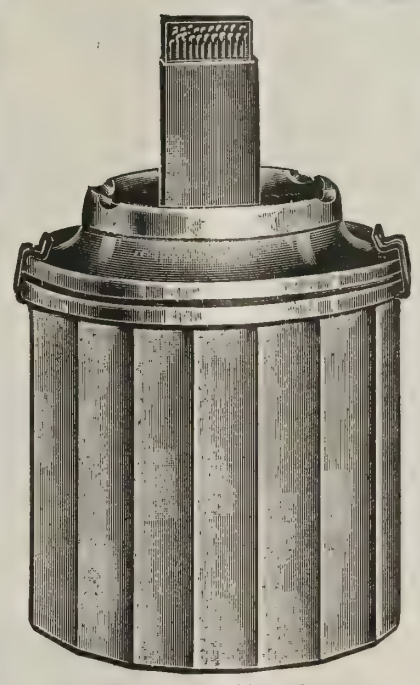
Port Royal—Chairman, Miss Bertha vice-chairman, Mrs. Ray Pollard; secretary and treasurer, Miss Alice Powell; members of the Executive Board, Mrs. Lester Cureton and Mrs. Will Young; county entertainment chairman, Mrs. William Munsey Pryor.

Campbellsburg—Chairman, Mrs. Wallace Campbell; vice-chairman, Mrs. A. O. Pyles; secretary and treasurer, Mrs. J. L. Orem; members of Executive Board, Mrs. Ed Brent and Mrs. James William Scott.

Turners Station—Chairman, Mrs. John Neblett; vice-chairman, Mrs. Ira Brent; secretary, Mrs. Dee Wilson; members of Executive Board, Mrs. James Pendleton and Mrs. Nobe Henderson.

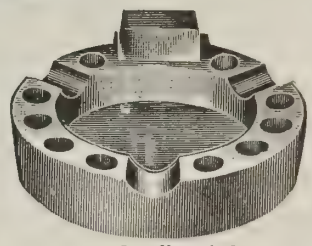
Smithfield — Chairman, Mrs. Henry Head; vice-chairman, Mrs. C. B. Wilson; secretary, Mrs. Barney Crum; treasurer, Mrs. J. S. Bate; members of the Executive Committee, Mrs. W. S. Hieatt, Mrs. Joe Callaway and Miss Mae Estes.

Eminence — Chairman, Mrs. Charles Ellis; vice-chairman, Mrs. Fannie Scott, secretary and treasurer, Mrs. Newton Bright; members of the Executive Committee, Mrs. O. L. Oster and Mrs. Henry Jackson.



Sligo-Pendleton—Chairman, Mrs. C. A. Smith; vice-chairman, Mrs. John J. Morgan; members of the Executive Board, Mrs. James Kidwell, Mrs. Robert Starks and Mrs. A. R. Garrett.

Maysville Man Gets Prize



MAYSVILLE, Ky., Aug. 11.—William L. Bloom, farmer of the Eagle Creek neighborhood, yesterday won a beautiful silver trophy offered by the Ripley National Bank to the grower who placed on exhibition the best stick of green burley tobacco of his own raising. More than 100 contestants submitted exhibits. Bloom's prize-winning stick was from a field of a recently-cleared sugar camp, with all exposure to the east.

LARGEST MANUFACTURERS OF TABLE GLASSWARE IN THE WORLD

Have you seen the big full page newspaper series?

Save from $52 to $78 a year

You will be amazed to see how the use of "Bull" Durham will cut down the cost of your smoking.

How is it possible to give you quality at the low cost of 10 cents for 50 cigarettes?

ANSWER: The government tax alone on 50 machine-made cigarettes is 15 cents—5 CENTS MORE THAN THE COST OF 50 "BULL" DURHAM CIGARETTES TO YOU!

The average smoker saves $1 to $1.50 a week by "rolling his own" from "Bull"—or from $52 to $78 a year. This makes quite a Christmas fund—or pays for a fine trip.

Tobacco Questionnaire to Assist Survey

With a view to obtaining as promptly as possible a comprehensive report on present conditions in the tobacco industry throughout the world, T. L. Hughes, the energetic chief of the Tobacco Section of the Bureau of Foreign and Domestic Commerce, is sending out to the American trade through W. L. Crounse, chairman of the Commercial Relations Committee on tobacco of the Department of Commerce, an elaborate questionnaire addressed to the bureau's agents in the principal countries in which tobacco is produced and consumed. While the questionnaire has been compiled with great care and appears to cover the ground fully, nevertheless Mr. Hughes is hopeful that its publication in the tobacco trade press may bring to him further helpful suggestions that may render the prospective reports even more valuable to the trade he desires to serve.

Mr. Crounse suggests that all persons throughout the trade who are interested in the extension of our exports and imports shall examine this tentative questionnaire with the utmost care, and will then transmit to T. L. Hughes, Tobacco Division, the Bureau of Foreign and Domestic Commerce, Washington, D. C., any suggestions with regard to desired amendments. Mr. Hughes realizes that a considerable number of houses in the trade have had special experience in dealing with certain countries and will, therefore, be in position to make valuable suggestions concerning data which may not wholly be comprised in the questionnaire.

The official schedule of questions to which the bureau's representatives are to supply answers follows:

Culture

1. In what provinces or districts is tobacco an important crop?

2. What types are grown? Cigar leaf, cigarette leaf or leaf for smoking?

3. In what months is tobacco planted? In what months is it harvested?

4. When does the producer sell his crop?

5. To whom does the producer sell? To government monopoly, dealer, broker or manufacturer?

6. Does the producer sell at a central market or at his farm?

7. What is the cost of production?

8. Who assorts and packs the crop?

9. What is the cost of assorting and packing?

10. How is the producer financed?

11. Is there any control or restriction of production by law or by agreement?

12. Is there a government bounty on production?

NOTE—Give the sources of your information.

Production

1. What was the acreage devoted to tobacco culture and what was the yield during the years 1913, 1919, 1920, 1921, 1922?

2. Report preliminary estimate of acreage and yield of tobacco for entire country as soon after transplanting as possible.

3. Report final estimate of acreage and yield after the harvest.

4. Report the average price per pound received by the growers for the crop.

5. Report stocks of leaf tobacco on hand at the end of the fiscal or calendar year.

NOTE—Questions No. 2, No. 3, No. 4 and No. 5 are to remain current. Give the sources of your information.

Imports and Exports

1. Names and addresses of dealers in leaf tobacco and the kinds handled.

2. Names and addresses of brokers and commission agents who handle leaf tobacco, and the kinds handled.

3. Who imports American tobacco? Dealer, broker or manufacturer?

4. On what terms does the manufacturer buy from the dealer or broker? How much time is granted for payment if credit terms are arranged?

5. Give the quantity and destination of American tobacco exported annually. (This question is to remain current.)

6. For what types of American tobacco, not used extensively at present, could there be a profitable market developed?

7. Who exports tobacco to the United States?

8. From whom does the exporter purchase his tobacco?

9. What middlemen enter into the exporting of tobacco to the United States, between the producer and the American importer? What commissions are paid?

NOTE—When the import and export statistics of tobacco are available in advance of the Official Yearbook publication it is urgently requested that such information be transmitted to the Bureau of Foreign and Domestic Commerce. The details desired are the quantity and country of origin of imports and the quantity and destination of exports.

Manufacture

1. Name and location of the principal tobacco factories, giving the product manufactured, whether cigars, cigarettes, smoking, chewing or snuff. Which is the principal product of the factory?

2. Give the total annual production of cigars, cigarettes, smoking, chewing and snuff for the entire country.

3. Which factories use American tobacco? What kinds or types are used?

Consumption and Revenues

1. What was the total consumption of tobacco for the years 1913, 1919, 1920, 1921 and 1922? If available, give separately the quantity of cigars, cigarettes, smoking, chewing and snuff consumed.

2. What was the amount of revenue received by the government from tobacco in 1913, 1919, 1920, 1921 and 1922, from import and export duties, excise taxes, manufacturing licenses, corporation taxes and other sources?

NOTE—This does not apply to countries having tobacco monopolies.

3. What part of the total government revenue is derived from the tobacco industry?

Government Monopolies

1. When was the government monopoly or regie established?

2. Procure copies of the decrees establishing the monopoly, or the articles of agreement between the government and the concessionaire.

3. Does the monopoly control all phases of the tobacco industry? That is, production, manufacture, sale, import and export?

4. How many factories does the monopoly operate for the manufacture of cigars, cigarettes, smoking, chewing, snuff?

5. How is the monopoly financed? How is the ownership of its stocks and bonds distributed?

6. What have been the gross sales, gross and net income of the monopoly during the years 1910 to 1922, inclusive, ir since its inception?

7. Are the revenues from the tobacco monopoly pledged on internal or external loans?

Resort Trade Still Good

The B. Wasserman Co., Inc., importers of Havanas and jobbers of domestic cigars, of 77 Chambers street, report a steady, sustained demand for high-grade brands from the resort trade.

To Return to Gotham

Nathan Bijur, of E. Rosenwald & Bro., who is at present enjoying a well-earned vacation in Orange County, returns to New York at the end of the week.

Chicago Dealers Do An Increased Pipe Business

Pipe Publicity Bringing Good Results—High Grade Pipes Being Featured Stronger Than Ever—New Condax Cigarette Distribution Plans Create Lively Interest.

CHICAGO, Aug. 11.—Pipes are showing an increase in sales and the pipe publicity is bringing the dealers good results. High grade pipes are featured stronger than ever, and among the imported lines Dunhill and Peterson get the call. Several shapes of Dunhill imported pipes are now shown at the store of E. P. Oakes, 153 N. Clark street.

A. M. Seckbach & Bro., the Kimball Building cigarists, are featuring a large window display of Camel—a 5 cent cigar.

To Place Personality

The Ryan & Raphael Cigar Co. will introduce Personality cigars to the Chicago smokers around Sept. 1. Doc Rosobro of the New York-Tampa Cigar Co. will be here at that time, to start the ball arolling and we all know "Doc" is some starter.

J. P. Brill of the Wm. J. Seidenberg Corp. has returned to Chicago headquarters after a trip through Indiana and Ohio.

Considerable Interest in Condax Change

The announcement made by E. A. Condax & Co., Inc., in Circular No. 15 to their customers, saying that effective August 4 the marketing of their brands will be discontinued by them and that hereafter all their brands are to be marketed by W. Duke Sons & Co., Branch, 212 Fifth avenue, New York, to whom all orders for Condax cigarettes should be sent, has aroused considerable interest. The Condax straw tip cigarette is in much demand here.

Sam Zuckerman of H. L. Rogers Co., New York, was in and showed the dealers some new styles of Peterson pipes.

Bogey, a 5 cent Tampa made blunt cigar that has a very large sale with Tebbetts & Garland, 16-18-20 N. Michigan avenue, will hereafter be made by the Wm. J. Seidenberg Corp. at the Seidenberg Tampa factory. The deal was closed by H. L. Harris, general manager of the Chicago branch.

Exclusive Box Trade

Geo. Hutt, exclusively in the box business, is sending his trade a fine lithographed postal card, stating he features the La Perla Española, made in bond cigar from Garcia & Vega. Another big seller with Hutt is Pancho Arango, also a bonded cigar. His office is at 128 North Wells street.

The sale on Fatima cigarettes increases each month.

Good Cigar and Pipe Business

Irvan Ries & Co., 104 North Wells street, report good results on the recent Emmerson campaign. Hundreds of Chicago stores now show the Emmerson line, which is made by the Frank P. Lewis Cigar Co. of Peoria, Ill. The sale of pipes during July showed a big increase with Irvan Ries & Co. who are one of the largest jobbers of pipes in the middle west.

No Trace of Stolen Cigars

Clarence Hirschhorn of the Clarence Hirschhorn Co., jobbers, 217 W. Randolph street, reports that no trace has as yet been had of the 40,000 El Producto and 20,000 Little Tom cigars that were stolen recently from the Chicago Bonded Warehouse. Mr. Hirschhorn asked the trade, both here and all over the United States, to be on the "look-out" for this merchandise and not to buy it if it were offered for sale, but to notify him at once and receive a $250 reward.

Watching for Welcome Visitor

Blue Boar cigarettes are up on top these days. All the clerks are waiting for the $2 man to come around.

Much in Evidence

Girard, the old standby, made in Philadelphia by A. Roig Langsdorf Co., is to be found wherever good cigars are sold. Girard has a host of friends who enjoy its mildness. P. J. Rubey & Co., South Chicago, are the Chicago-Girard jobbers.

Pleased with Progress

A. Zaphirio & Co., the largest cigarette manufacturers here, whose factory is at 112 East South Water street, find the sale of their Zaphiro, all Turkish cigarette, on the increase. This well established brand, which comes in the 10 for 25 cent size is to be found on sale in all the clubs, hotels and better cigar stores.

Selling Well

Royal Bengal, short smokes, are selling good and every live dealer has the package in stock.

Escomade, a clear Havana, Tampa made cigar, is distributed by L. C. Marks & Co., of 36 South State street. It's a big favorite in many stores.

Going Well

Hotel La Salle, from Marcelino Perez & Co., pleases the smokers at the Hotel La Salle. Cigar manager Nate Hofert features this clear Havana strongly.

Cortez, from Key West, "made for men of brains," moves ahead. This fine clear Havana is sold only by the very best of dealers.

For those who have been inquiring, the Antonio and Cleopatra, clear Havana cigar, is distributed here by J. & B. Moos, at 211 West Randolph street.—H. L. H.

Mexican Planters Show Some Discouragement

WASHINGTON, D. C., Aug. 15.—According to reports from numerous tobacco planters in the Valle Nacional and Ojitlan districts of Mexico, they will not plant any tobacco this season, owing to the low prices, and to the fact that many planters still have their last crop in the warehouse, being unable to sell it or even to get any offers for it, according to a report received by the Department of Commerce from Vice Consul Myers, at Vera Cruz.—LAMM.

Going South

F. M. Arguimbau, vice-president of the American Sumatra Tobacco Co., Inc., of 131 Water street, is scheduled to leave New York next Tuesday for the southern territory and expects to be away for four weeks or more.

Western Prospects Bright

John Fielding, of Cullman Bros., Inc., has just returned from a two weeks' tour in the middle west. Mr. Fielding noticed a great improvement in business conditions and is optimistic regarding future prospects in that territory.

Read Tobacco and Keep Up-to-Date

THE READ PASTE MIXER

In every cigar factory, large or small, gum trag must be mixed. This operation, usually performed by hand, requires much time and labor. A Read Mixer will perform this work for you daily, giving you a much better paste as it will positively remove all lumps and then, too, it will give a larger quantity from the same amount of material than when mixed by hand.

Used in the various plants of Otto Eisenlohr & Bro. Co.

St. Louis Trade Topics

Business Just So So

ST. LOUIS, Mo., Aug. 11.—The usual summer quietness is on in the cigar and tobacco business. While it is better than it was during the hot months last year, it is still below the wishes of the trade. However, the jobbers and retailers are not making much of a cry, for they are doing quite well, even with sales not better.

The will of Emil Wehmeyer, president of the Jacob Lampert Cigar Co., who died a short time ago, has been probated and it showed he left an estate valued at about $50,000. He bequeathed it to his two brothers. He and Fred Hack were for many years associated with the late Jacob Lampert, when the latter died in 1921. In the will left by Lampert, it provided that they were to have priority in buying the business, which they did.

Went to Badger State Instead

Taylor Stickney, of the Stickney-Hoelscher Cigar Co., was one of the many who overlooked the Ozarks when he left last week on his vacation. Instead of going to that popular place to spend his vacation, he went to Wisconsin, where he met some friends, and will remain there, enjoying himself for several weeks, or until he gets tired and wishes to get back to business.

Traveling representatives coming to St. Louis remain here only long enough to attend to their business and go right out again. This is because of the intense heat that prevails. They are anxious to get some place where it is not quite so hot.

Notable Window Displays

Window displays were as attractive as usual last week. In-B-Tween was shown by the Moss & Lowenhaupt Cigar Co.; La Palina by the Wm. A. Stickney Cigar Co.; La Venga by Rauh-Millius Cigar Co.; Tales of Havana by Stickney-Hoelscher Cigar Co.

Heavy Rains Do Much Damage in Dark District

HOPKINSVILLE, Ky., Aug. 13.—Tobacco throughout this part of Kentucky and Tennessee has suffered materially from the heavy and repeated rains which have fallen this summer. These rains have been especially severe since August 1, and not only is the damage due to wet soil, but high and rushing water has literally washed much of it out of the ground and destroyed it while in hundreds of other cases, fields have been covered wholly or in part to such a depth that the plants were entirely submerged.

About a week ago there was such a heavy rain that all streams were raised to a higher mark than at any time during the past winter. These streams overflowed their banks and flooded all the bottoms, catching countless acres of tobacco, most of which was covered entirely. This damage was not confined to the lands adjacent to streams, for in possibly as many instances, lowlands were converted into lakes and again did tobacco, caught in such cases suffer damage.

Tobacco was not the only crop damaged either, for corn suffered along with it. Very frequently the water was so deep that the tall corn stalks would be entirely submerged.

It is feared that all tobacco so flooded, and especially that entirely covered, will be practically ruined not alone from the water but from the deposit of mud and slime left on it. In every instance where the plants were touched, the leaves presented a most bedraggled and sick look.

Here in Hopkinsville the official gage shows that the rainfall for this year to August 10 was 51.53 inches. The average for Kentucky for the year is 38 inches. So the average is already beaten by 13.53 inches and there is nearly five months of the year yet.

Tobacco on the highlands is looking good and growing off most vigorously under the effect of the wet season. Corn, too, is in similar condition. But in the lowlands where the water collects or where the soil retains the moisture, damage is feared. This fear is chiefly that the tobacco will "french." Also, the growers and dealers say, if the rains continue the tobacco will not thicken up and have the weight and gummy substance that is so much desired.—M. E. BACON.

Canada Tobacco Grows in Public Favor

TORONTO, Ont., Aug. 11.—Great progress is being made by Canadian grown tobacco in securing the favor of the tobacco-consuming public, says the *Natural Resources Intelligence Service* of the Department of the Interior. This natural resource is one which is assuming very great importance, in view of the tremendous prejudices which have had to be overcome, both at home and abroad. Only in June, 1921, speaking at the Canadian Manufacturers' Association annual meeting in Montreal, a prominent Canadian tobacco manufacturer made the statement that "the policy of the manufacturers has been not to have the consumer detect the brand contained in Canadian tobacco because the reputation of Canadian tobacco was not right with the consumer, and we have been able to increase the consumption of Canadian tobacco only by the consumer not knowing it was Canadian."

Since this statement was made, however, conditions have rapidly changed. A policy of education on the merits of Canadian-grown tobacco has been carried out, and the loyalty to Canadian products has prevailed to such an extent that the consumption of Canadian tobacco is steadily increasing, and with the knowledge that it is Canadian grown.

One of the results growing out of the war is the increasing appreciation of Canadian tobacco among the British public. The enormous amount supplied from Canada in large and small quantities to individual soldiers, by their friends, was instrumental in cultivating a taste for this country's tobacco among the British soldiers, and, this market in the Old Country is rapidly enlarging. Canadian tobacco is now looked upon very favorably by British importers and manufacturers, and is recognized as superior to tobacco imported from other British colonies, such as South Africa and Rhodesia, owing to its excellent flavor, while at the same time it compares very favorably with the best grown in the United States.

So great has the British demand for Canadian tobacco become that over one million pounds, grown in Essex County, was shipped to Great Britain during 1922, to be used in the manufacture of cigarettes, pipe tobacco and twists. In anticipation of increased requirements in Great Britain it is reported that a British tobacco firm has purchased land at Kingsville, and proposes to erect a modern factory there for the processing and curing of Canadian leaf tobacco. The Canadian Tobacco Growers' Co-operative Co. has entered into a contract to supply the new British firm with 2,000,000 pounds of dark leaf tobacco.

How Canadian tobacco users are increasing the consumption of the home-grown product is shown by the record of imports for the past three years. In 1920 there was imported 21,120,729 pounds of unmanufactured tobacco, in 1921, 19,924,721 pounds, and in 1922, 14,453,671 pounds. The above quoted speaker further said, "It is all a question of the education of the taste. If you will use Canadian Burley instead of Virginia for a month you will not go back to Virginia tobacco." The trade returns would seem to bear out the statement, and it is encouraging to see the very great increase of appreciation of the Canadian product which will merit a greater interest in the development and improvement of this crop by the growers.

Returns from West

Arthur Bornholdt, of A. Bornholdt & Co., has returned from a business trip to the West. Mr. Bornholdt found his choice Sumatra and Java leaf in good demand and was very pleased with the results of his visit.

Sliding Shell Packs and Display Containers

For Five or Ten Full Size or Small Cigars.

This new and logical package will increase the sales of your cigars.

Smokers are showing a decided preference for it.

Let us submit a design for one or more of your brands. Drop us a line and without expense to you we will show you what can be done.

THE ROCHESTER FOLDING BOX CO.

Capacity, 10 Million Boxes a Day.

ROCHESTER, N. Y.

Advertising Does Pay

The outstanding fact that, within 20 ars, the cigarette has passed the cigar d licked its larger competitor by no ss than 55,000,000,000 in the annual itput, is a classic example of what adrtising can do for a commodity. Adrtising to the trade and to the conmer has advanced the cigarette to 60,-0,000,000 yearly production. Lack of dvertising has left the cigar "in irons" a 7,000,000,000 output.

These figures shout out loud. They ave awakened our wealthy cigar indusy, and it is now proposed to spend a illion and more dollars annually to turn e ebbing tide. Properly directed, this mpaign should succeed.

Advertising revived the Manila industy and saved the Porto Rican industry hen it was going to the dogs. Adversing does pay. No business, however g, can afford to ignore trade or conmer.

Advertising properly directed and laced, is the light and the signboard of roductive industry. The business man ho thinks he can get along without adertising is as backward as the man who inks he can manage without light or a gn to invite custom.

The American cigar industry is ealthy in heart. It has brains at the op. It has been held back by the arnacles that have sucked its power rom the bottom. It does'nt pay to fool he consumer; it doesn't pay to "plug" rade or smoker. It does pay to keep p the brand and to advertise it on a elf-selling basis. Business must regulate business and provide the axle-grease needs—advertising!—*New York Commercial.*

New Tobacco Store in London

An event of some importance to the British tobacco trade and of not less importance to tobacconists abroad, is the opening of a splendid modern tobacco store at 27 Throgmorton street, London, directly opposite the Stock Exchange and close to the Bank of England, the Mansion House and other prominent city landmarks.

The site selected was one upon which a bank had previously stood, but the premises have been transformed into a veritable pipe palace—the arrangements and fittings being throughout up to the high standard Mr. Dunhill always attains. There are two windows. In the one as a centre piece is a large original bruyère root, near which is a display of "Shell" briars. The natural grain stands out in relief and is "both a joy to the sight and a pleasure to the touch." The lower part of this window is taken up by an artistic arrangement of Dunhill's bruyère dead root pipes, "absolutely the finest pipe the world can produce," to quote the window bill. A point of interest to all is the neat announcement at the foot of the window: "Any pipe in this window can easily be taken out for close inspection." The other window shows fine specimens of cigarette tubes made in the Dunhill factory, "quaint shapes" in bruyère pipes, and in both windows there are various blends of "My Mixture." Interiorly the soft carpet in an art shade of green, the lavish lighting by specially shaded electric lamps, the electric stove, which looks like a cozy coal fire, a smoker's lounge, and a cedar-lined cigar room provided with delicate instruments for registering the correct humidity and temperature are other striking details. A special system of ventilation is provided in the shop by which stale air is drawn off and fresh air introduced. The most eye-arresting feature, however, is "Sandy," the majestic wooden Scotsman, who, in his Highland bonnet and kilt, stands on sentry in the doorway with an ancient snuff box in his hand. The figure dates from 1750, and is probably the finest specimen of his clan extant. For many years he enlivened a tobacconist's shop in Doncaster, but was attracted at long last to London and the Stock Exchange, where so many of his "brither Scots" have made good. Another treasure is Sir Walter Raleigh's pipe, which reposes in a glass case near the counter. Near by an expert blender makes up special mixtures to suit individual tastes.

Growth of Leaf Imports to Czechoslovakia

WASHINGTON, D. C., Aug 8.—The outstanding feature of the report on the tobacco industry of Czechoslovakia from Consul C. S. Winams at Prague is the amazing growth of the imports of leaf tobacco. These imports have increased from 23,585,320 pounds in 1920 to 39,635,640 pounds in 1921 and to 57,-701,878 pounds in 1922.

Of the 1922 imports, the United States is credited with nearly 9,000,000 pounds as compared with a little more than 4,000,000 in 1921. As the tobacco shipments from the United States to Czechoslovakia are indirect, being reconsigned from Holland, Germany and Great Britain, these figures do not appear in the export statistics of the United States.

This discloses a situation of vital interest to American exporters. The necessity for paying European middlemen for handling this business is not apparent, and this can be obviated by American exporters selling direct to the Czechoslovakian Tobacco Monopoly, to the mutual advantage of both the buyer and the seller.

Czechoslovakia's Imports of Leaf Tobacco in 1922

Country	*Weight in Pounds*	*Value in Crowns*
Bulgaria	11,855,360	75,675,891
Holland	12,382,797	64,063,779
United States	8,957,069	49,159,846
Dutch East Indies	6,385,183	48,266,639
Hungary	5,342,407	30,362,704
Turkey	1,522,717	26,326,572
British India	2,072,324	16,429,508
Greece	1,128,094	15,025,111
Other Asia	1,626,333	10,696,797
Roumania	2,223,119	9,654,034
Brazil	1,235,899	9,465,919
British America	946,876	6,900,029
Cuba	600	3,005,868
Other America	1,880,744	1,862,297
Totals	57,701,878	366,894,994

(One crown equals $0.03 at present rate of exchange.)

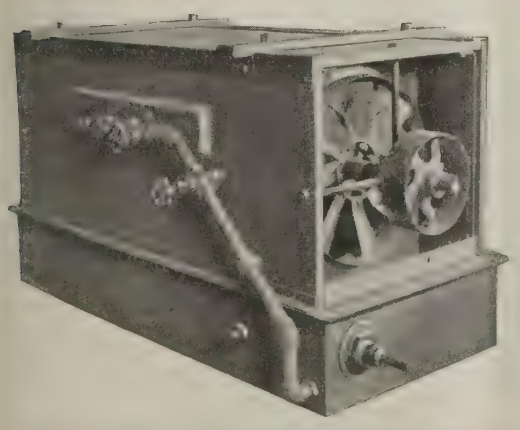
Of the imports of manufactured tobacco products, Italy led by supplying 93,475 pounds of cigars valued at 4,864,-140 crowns out of a total of 95,459 pounds valued at 4,871,340 crowns. Of the total imports of cigarettes 18,960 pounds of cigarettes valued at 2,165,971 crowns, Egypt supplied 9,480 pounds valued at 996,257 crowns and Switzerland supplied 6,818 pounds valued at 968,000 crowns.

During the calendar year 1922, Czechoslovakia produced 2,620,608 pounds of tobacco, under the supervision of the State Tobacco Monopoly, for which growers were paid 14,423,170 crowns, plus 143,349 crowns paid to the farmers for transporting the tobacco to the government store houses. (One crown equals $0.03 at the present rate of exchange.) Of the 1922 crop, Bohemia produced 5,071 pounds, Moravia 5,732 pounds, Slovakia 2,177,483 pounds and Ruthenia 432,322 pounds.

The area under cultivation in 1922 amounted to approximately 1,557 acres, while the proposed area for tobacco cultivation for 1923 is approximately 1,710 acres. The tobacco monopoly has also given permission to cultivate in Bohemia and Moravia for experimental purposes, but not to exceed 124 acres.

The turnover of the Czecho-Slovak Tobacco Monopoly, during the calendar year 1922, amounted to 1,890,000,000 crowns, and resulted in a net profit to the Czecho-Slovak treasury of 800,000,-000 crowns.

The amounts of tobacco products manufactured in the nineteen factories, from the local production of 2,260,608 pounds plus 57,701,878 pounds of leaf tobacco imported, are shown in the following table, as well as the amounts consumed during the year 1922.



Czechoslovakia's Manufacture and Consumption of Tobacco in 1922

Product	*Manufactured*	*Consumed*
Cigars, M.	597,000	436,000
Cigarettes, M.	6,930,000	6,000,000
Cigarette tobacco, packages	14,000,000	13,500,000
Pipe tobacco, packages	295,000,000	322,500,000
Snuff, pounds	155,000	155,000

BREWER BROTHERS
Growers and Packers of Connecticut Tobacco
HOCKANUM, CONN.

July 13th, 1923.

D. P. Gosline,
Boston, Mass.

Dear Sir:

We installed one of your Ebulator Air Conditioning Machines in our warehouse the past season, and same has given very satisfactory results. We have tried two other systems of air conditioning machines and find yours far superior to either of them.

For your information we might state that we found quite a considerable saving in coal. The warm air which comes from this machine required our coils to be turned on only in extremely cold weather.

We are now cleaning the machine up and can see very little wear on the first season's use. This machine is of rugged build and we see no reason why it should not stand up indefinitely.

Very truly yours,
(Signed) BREWER BROS.

Manila News Notes

The Isabela factory, of Manila, is distributing an illustrated booklet which describes in detail the growing of tobacco in Isabela Province, Philippine Islands where their plantations are located and the work of cigar-making at their Manila factory. The Isabela factory is one of the largest plants in the world producing hand-made, long filler cigars only.

* * *

Jas. Schwartz, of Cleveland, is calling on his trade in the East with a Manila line.

* * *

Heavy shipments of Manila cigars are being sent forward to meet the demand of the Fall and Winter trade.

* * *

The Philippine Government is planning to display Manila cigars at the Tobacco Exposition to be held at the 71s Regiment Armory next January. Exhibits are being prepared by the Manila factories.

* * *

Prices for Manila cigar leaf has stiffened the past few weeks, due to an unusual shortage because of destructive typhoons that swept the Cagayan Valley early in the season.

* * *

C. A. Bond, tobacco agent for the Philippine Government, returned from a short trip to the Middle West last week.

* * *

C. H. Hilbert, 80 Wall street, is displaying some attractive samples of cigars from La Insular factory under El Solera label. The same sizes under La Insular label are big sellers on the Pacific Coast.

* * *

The recent sale of Isabela Royals by the "limited" was one of the most successful enterprises of the kind, pulled by the "big chain" during the past year.

* * *

S. J. Freeman & Sons are winning a strong following on their Manila line from Flor de Intal factory. Uniform quality and close attention to every detail by this factory makes the brand one of the sure winners with every jobber and dealer who stocks them. The smoker knows.

* * *

C. G. Wilson, Inc., reports a crop of good orders during the past week. Bolano and Luis Espoy are strongly entrenched in many sections.

"Tabac Canadien"

Canadian tobacco men are showing considerable interest in a new method of curing Canadian grown leaf which permits manufacturers to render it mild and fine flavored so that it can be more extensively employed in blending. The improved process has been developed by Harold Boyd, of Montreal, an industrial chemist. Details of the new treatment have not been published, but our contemporary, the *Canadian Cigar and Tobacco Journal*, has been impressed with the possibilities of the new process.

Mr. Boyd has stated that he intends handing over the process to the Federal Government, and he has already written to Ottawa authorities to this effect. The process will permit the tobacco grower to treat his own crop; the treatment arresting decomposition, preserving the leaf and retaining its aroma and freshness. No special skill or machinery is required as the treatment has the effect of removing the bite and rawness from the leaf, freeing it also from elements which create mouldiness and increasing its combustion qualities.

The inventor pointed out that the Dominion Experimental Farms branch of the Department of Agriculture might well take up the industry among its other activities for the benefit of tobacco producers. Mr. Boyd states that he has not entered into any negotiations with tobacco manufacturers, preferring to see the country at large benefit from the discovery.

[1] July 1 to Dec. 31, 1921. [2] Jan. 1 to June 30. [7] July 1 to Dec. 31, 1922.

President Stone Speaks at Jonesboro

JONESBORO, Tenn., Aug. 11.—President and General Manager James C. Stone, of the Burley Tobacco Growers' Co-operative Association, today made the first public address to tobacco growers of eastern Tennessee urging that they join the co-operative and market their tobacco through it. Mr. Stone told in detail the story of the success of the Burley co-operative the first two years of its existence, declaring that a "sane and sensible system of marketing" had raised the price of the 1921 crop of tobacco 9 cents a pound more than that of 1920 and that an advance of approximately 8 cents a pound more than the 1921 crop brought had been realized for the crop of 1922.

Mr. Stone said that this had added to the cash return to the tobacco growers of the Burley district somewhere between $45,000,000 and $50,000,000 in the two years the association had been in operation and that the growers in those sections of the Burley district in which it operated are satisfied with the new system of selling.

Mr. Stone came to east Tennessee as a result of a recent visit of a delegation of farmers, merchants and bankers to Lexington, Ky., where they made a first-hand investigation of the methods of the Burley co-operative and reported to growers here that the plan is not only feasible and practicable, but that its avowed purpose of stabilizing tobacco prices and land values in the tobacco sections has been fully realized.

Mr. Stone went fully into the plan of financing, showing the impossibility of the individual grower financing a crop and pointing to the fact that the government, as well as local banks, regarded the warehouse receipts of the association, as well as its participation certificates issued to growers, as first class collateral for loans.

NEW YORK, THURSDAY, AUGUST 16, 1923

SEEN IN THE NORTHWEST

Westward the promise of better business commences to materialize. From St. Paul to Seattle, many signs of improvement are seen. In Minnesota and the Dakotas, assurances of bigger trade are as good as wheat. Throughout the great Northwest, the harvest tells the story.

Persistently, for months, the country has been told of discouragement and discontent. Tillers of the soil were declared to be terribly pessimistic. According to reports, gloom beclouded agricultural districts. Farmers were depicted in attitudes of dejection, despair and revolt. Politicians, from different view points, saw red danger or blue ruin. Alarmists announced that, since the war, prosperity had departed from the farm. However intended, such advertisements of trouble in rural regions did cause prices of farm products to go lower. Business of all kinds slowed down and decreased. Meanwhile, it rained. During the Spring and early Summer, the rainfall was unusual on parts of the wheat belt often affected by drouth. The land obtained moisture enough to insure good crops. In many places, this year, the yield is double the average. Not only the grain growers gained benefits. The cattlemen profited because of the weather. Instead of drying up as soon as Summer came, the grass on the hillsides and upland plains kept growing and remained green. For herds and flocks in the Northwest there was abundance of feed. Beef and wool were produced in larger quantities at less expense. Though prices of farm products are not so high now as they might be, farmers and stockmen, because of increased production, will get a lot of money. In the Northwest, practically everywhere, business conditions actually are much better than people in the East would infer from previous reports.

In Minneapolis and St Paul, cigar distributors all are doing well now. The outlook is good. A big Fall trade is anticipated. Jobbers are getting hurry up orders from country dealers who allowed stocks to become low. Retailers have begun to buy generously. Business in the Twin Cities is increasing. Shipments to Dakota points approach the record mark. Demand for cigars in Class C is growing. The evidence is in the show windows.

Wages are high. If they desire to work, men don't have to go far to find employment. In some localities, employers have been bidding against each other to get labor.

On the railways and on the highways, travel is heavy. How many people are taking vacation tours, motoring across the country, it would be hard to say. The wonderlands, the places of scenic grandeur, the spots where Nature is most freakish or magnificent, the National Parks have attracted visitors in record breaking numbers, this Summer.

On the Yellowstone Trail, in an inconspicuous little cow town in Montana, a tiny store supports a big sign of high visibility. Up or down the road, whichever way he may be coming, the motorist is given a view of a sign that says: "Cigars to Suit You." Most smokers will agree that the quality and variety offered there is a justification for the advertisement. The display in the window and show case would do credit to a pretentious shop in New York.

Asked, "How is it that you have such a fine assortment of cigars in a small place like this?" the proprietor answered: "Because it's the way to get trade. I experimented and found that it paid. Lots of automobiles pass here, every day, during the tourist season. In nearly every car is a man who might buy some good cigars. Mostly, these travelers are a long way from home. Maybe they had trouble, along the way, in getting what they wanted to smoke. I carry imported Havanas, clear Havanas, mild Havanas, Manilas and various domestics. A number of good brands are represented by several sizes. Generally a smoker recognizes some old friend. If tourists stop and take a look at my stock, usually I can do business. I sell a good many cigars by the box. Sometimes a customer takes three or four boxes. Trade is fine while travel lasts. Then, too, I notice, when they have a chance to pick and choose, the ranchers around here are more inclined to buy good cigars. Yes, sir, I believe in having things just right."

In Butte and Anaconda always there is some cigar business. But trade, confessedly, was dull from February to the end of May. In June, a slight change for the better was observed. In July, the improvement was more perceptible. In August, the upward trend continues. Of all the States, Montana probably had the most depressing experience in the slump that followed the war. Mine operators, farmers, stockraisers and lumbermen alike were hit hard. They suffered. Prosperity seemed to be long deferred. A better demand and a higher price for copper now is expected. Every miner available is being hired. Workers are welcomed. There is a labor shortage in Butte.

All over Idaho business conditions are said to be good.

In Spokane, no cigar man is complaining. Distributors are busy. Trade is developing. Much money circulates. Farmers in Washington are harvesting the biggest wheat crop ever grown in the State. In the famous orchard districts, the trees are loaded down with fruit. Saw mills are working full time. In the timber, more men are wanted. The wages of loggers average $6.50 a day. In Seattle and Tacoma, better times have come.

Famed Puget Sound, with all its maritime advantages, proclaims what great opportunities Seattle has. The winds that sweep across the Pacific carry to the shores of Asia stories of Seattle's glory, progress and growth. The snow-clad, cloud-capped peak of Mount Ranier bespeaks the lofty ambitions of Seattle. The mist that swathes Seattle at times is optimistic.

Is Seattle, already great, destined to be one of the greater American cities? "Yes, surely," every loyal citizen of Seattle will say. Seattle holds the key to the nearest gate of the United States to the Orient. It is a port of infinite possibilities. It is the get-away place for those who go to Alaska. It will be the receiving point for most of the immense business that eventually will be developed in Alaska. Seattle's ocean trade extends practically to every sea. Seattle's railroad facilities are unsurpassed. In Seattle the achievements of the past are but the promise of the bigger things yet to be.

Many men now active in business are older than Seattle. The expectation is that a goodly number of them still will be living when Seattle attains a population of a million. Use of the superlative is pardonable in describing prospects in Seattle. Certainly, cigar business is good in Seattle, not phenomenal, but satisfactory at present and promising for the future.

DISSIPATING AT 83

Jokingly, of course, George F. Baker, the New York banker, admits to newspaper reporters that he began dissipating at the age of 70 years. By "dissipating" he means that at the age of 70 he began to use tobacco and play golf. Like many persons who afterwards became wildly and madly enthusiastic over golf, banker Baker looked upon the sport when enjoined by friends to take it up, as "an admirably foolish pastime, but one which, doubtless, would prove healthful." A little later on, after he acquired a few of the tricks of the course, he entered into golfing as a keen competitive sport. Mr. Baker is known to be one of the richest five men in the country, and certainly he is one of the most successful financiers in this or any other nation. He confesses on his 83rd birthday that neither smoking or golf playing has done him harm; but quite on the contrary both seem to have added years to his life. It is one of the familiar yarns that we hear ever so often that the use of tobacco or the indulgence in outdoor exercise are not for men of older years, but here we have an illustrious example of a successful banker who "dissipates" in both ways and gets a lot of happiness and enjoyment out of resort to these "failings." Wholesome outdoor exercise is very important to continued health, and as the years pile up it becomes fundamentally necessary to give some heed to offsetting the complaints which age brings on.—*Springfield (O.) News.*

ONE OF LIFE'S LITTLE TRAGEDIES

Tragedy is something that happens to you. Comedy is something that happens to the other fellow.

Evidence of one of these little tragedies came to light in the upper cabin of the Erie ferry Youngstown last Friday morning about 9 o'clock. It (the evidence) was a straight, black, rubber-stemmed French Briar pipe, with the bowl half filled with ashes long since cold. It lay on a window sill at the right of one of the long seats.

Now a pipe—an old, well-sweetened pipe—is entitled to respect. To lose an old pipe is to lose an old friend; and that, you know, is tragedy.

That is why this writer picked up that lost pipe, brought it to the office and stowed it carefully in desk drawer. So this is written in the hope that owner and pipe may meet again and that the shadow of another one of life's little tragedies may be lifted.—*New York Sunday News.*

UTAH'S TOBACCO LAW

The war is over. It is permissible to smoke a cigarette in public in Utah, but it is against the law for the makers of these perilous tools to advertise them on billboards or otherwise affront the eye. One may smoke, but the tobacconist may not publicly gloat over his trade. The reformers will not have their nerves shocked by the glaring publicity of the torch burners. Cut plug may be had, but not lustily advertised. Utah may not be safe, but it wishes to be sane.—*Los Angeles Times.*

TOBACCO IN GEORGIA

Tobacco is being raised on a large scale in Southwest Georgia. In Lowndes County, it has come to be an industry of vast moment and consequence. The little town of Hahira is getting "very much on the map" as a center of tobacco cultivation and marketing.

Georgia ought to raise ten times as much tobacco as it does. Tobacco of a fine and salable quality may be raised in all sections —just as good tobacco as North Carolina raises.

It is within the memory of many Georgians when every farmer had his little tobacco patch, for domestic use—and frequently he

had some to sell to the town folks. The tobacco patch is now the exception rather than the rule.

South Georgia is finding tobacco a most profitable crop. The boll weevil brought about this new condition of things in large measure; in fact, as devastating as the activities of that pest have been, it has operated to Georgia's distinct gain in some directions.—*Atlanta Georgian.*

TOBACCO-GROWING EXPERIMENT

The news that so small a number as two tobacco curing barns were built in Laurens and Anderson counties this year might not seem of much importance, but as a matter of fact it is of considerable significance. It may mean the beginning of a new and important industry in the Piedmont. For a hundred years or more small patches of tobacco have been grown in this section by farmers for their own use, but for some reason or other the crop has never been raised in commercial quantities. Tobacco curing barns are few and far between in the Piedmont and the two or three built this year probably doubles the number. But this is the first time in recent years that a serious effort has been made to grow tobacco for the market, and if the experiment proves successful there is no doubt but that a large number of farmers will take it up next year. Tobacco is a cash money crop just the same as cotton and is just the thing to help along the diversification program. It is not difficult to interest people in something that brings in ready money. Reports from both Laurens and Anderson counties say that at this stage the tobacco growing experiment is satisfactory in every way. If the farmers prove that tobacco can be grown successfully in this section it is up to some city to provide a good market and warehouse for the encouragement of the new industry.—*Charleston (S. C.) News and Courier.*

YES, WE HAVE NO MILD CIGARS

Conversation overheard the other day between a retail cigar dealer and a prospective box customer illustrates why the trade should cooperate in furthering the campaign of truth as to the non-relationship between cigar colors and cigar strength. It also illustrates how not to try to sell cigars, irrespective of this particular point.

The customer has asked for a box of twenty-five cigars of a certain brand and shape.

"You want them mild, of course?" the man behind the counter opined. The customer said he did. He particularly wanted them mild. After a moment's search the cigar man explained that he "hadn't a single box of claros left in stock," in the shape the customer wanted.

"Well, I can't smoke a strong cigar, and I must have that brand," the prospective buyer declared as he walked out of the store.

Did the merchant lose a grand opportunity to "educate" his customer as to just what influenced the strength and quality of a cigar? Wonder if he is one of those dealers who claim they havn't time to "educate" customers about merchandise they sell.—*Canadian Cigar and Tobacco Journal.*

AN ARGUMENT FOR SMALL TOWNS

The president of a cigar manufacturing company, in a discussion of labor troubles and remedies for them, brought up a subject of which we are likely to hear a good deal during the next few years. He told of the advantages to a manufacturer in establishing his plants in small towns in preference to large cities.

His own company, he stated, formerly had its factories in New York City, where it experienced a good deal of difficulty on account of the restlessness of the employees, who were always demanding higher wages than the corporation could afford to pay. The factories were removed to small towns, and the labor trouble disappeared, because in these little communities the men's wages brought them a larger share of the comforts of life than they could procure with the same money in the metropolis.

The decentralization of industry is one of the economic problems of the day. The grouping together of manufacturing plants in the large cities makes for undesirable congestion of population, insanitary conditions, the formation of colonies of foreigners and their evils which we would like to avoid. Unfortunately, it is not always easy for a great industry to move its mills to small towns. Transportation facilities and proximity to markets and raw materials must be considered, as well as other things in which the large urban center often has an advantage over the less congested community.

Development of super-power systems, through which electric energy for use in operating machinery as well as for furnishing light and heat may be had in whatever quantities are desired in any part of the country, is expected to do much to relieve the situation. When super-power is available it will be an easier matter for a corporation to leave the great cities and establish its factories in the rural districts.—*Fremon (O.) Messenger.*

POOL TO ELECT IN SEPTEMBER

Mass meetings for the nomination of delegates, who will be elected in the various counties of the burley district, will be held September 1, these delegates will be chosen at elections in each county seat September 15, and the delegate so chosen will meet in that county of each district which delivered the most burley tobacco to the burley co-operative September 17 to elect directors for the ensuing year, according to the terms of a resolution adopted by the board of directors of the Burley Tobacco Growers' Co-operative Association in regular monthly session at Lexington, Ky.

Cigar Companies Expect Good Year

Cigar companies generally are doing a larger volume of business this year compared with a year ago. While the gains in sales so far this year have not been reflected in corresponding increased net, as disclosed by reports of several companies so far, it is expected that larger volume of business which comes during the summer and fall months will be reflected to a greater extent in net. Cigar companies this year seem to be assured of at least as good a year as 1922 with the probability that some good improvement will be shown.

First and second quarter earnings cannot be prorated to show what can be expected for the full year. Usually, the first three months period is the poorest in the year, followed by moderate improvement in the second quarter while the third quarter is the best.

Final three months is also a good one showing some falling off as the holidays approach.

Tobacco Industry Rated High

In connection with continuation of good earnings by the cigar companies, it is interesting to note that a bulletin of the New York Federal Reserve Bank issued a short while ago compiling earnings of representative industries for 1922, out of a group of 12 major industries gave the tobacco industry an index number of 137, being exceeded only by public utility companies at 162 and class 1 railroads at 150. The number 100 represents the 1919 earnings.

Bayuk Cigars, Inc.

Bayuk Cigars, Inc., for the first six months of this year showed earnings about the same as the corresponding period of a year ago. The six months earnings statement to June 30, last, showed net earnings before depreciation of $592,113 before provision for Federal taxes. For the corresponding period of 1922, net after taxes amounted to $556,636. As taxes on 1922 earnings approximating those of this year amounted to $161,000 it is safe to assume that there was a slight falling off in net.

General Cigar Co., Inc.

General Cigar Co., Inc., for six months ended June 30, last, showed increased sales at the rate of more than $500,000 annually but final net shows only slight increase due to larger interest charges on increased bank borrowings. A comparison of six month statements to June 30, 1923 and 1922, follows:

	1923	1922
Gross earnings.....	$4,270,822	$3,861,477
Net after taxes.....	1,210,756	1,073,761
Interest on loans...	129,044	57,685
Earnings a share on common	$4.22	$3.80

Thus, while in the six month period of 1922, only $3.80 a share was shown, for the full 12 months $10.43 was earned on the common. It is indicated that this year the company should be able to show at least $12 a share on the 181,040 shares of common stock or twice dividend requirements. Increased interest charges this year can be attributed to the fact that balance sheet as of June 30 last showed bills payable exclusive of accounts payable amounting to $7,500,000 compared with $2,500,000 a year ago.

Consolidated Cigar Corp.

Consolidated Cigar Corp. in the first quarter of this year showed net profits available for dividends of $154,961 equal to 57 cents a share on the 150,000 shares of common, compared with $112,545 for corresponding period of a year ago equal to 22 cents a share. Despite the small amount of earnings shown in the first quarter a year ago, Consolidated showed $4.77 a share for the full 12 months. Due in part to acquisition of new selling agencies, many of them in the New York Metropolitan district, second quarter earnings showed moderate improvement over those of a year ago. Interests in the company believe that better than $7 a share can be shown on the common this year based on the half year's known results. Last year the company after dividends on the preferred stock, added $975,000 to surplus. There is no thought of any payment on the common stock at this time and none is likely this year. The aim of the management is to build up working capital from earnings and strengthen financial position.—*Financial America.*

Co-ops Plan Warehouse in Glastonbury

GLASTONBURY, Conn., Aug. 11.—The organizing of a warehousing corporation by members of the First and Second districts of the Connecticut Valley Tobacco Association and the building of a warehouse with a capacity of 10,000 cases, are projects presented to members of the two districts in a letter from President Joseph W. Alsop.

The letter follows the joint meeting of the two districts at the Williams Memorial building when a resolution was adopted, 71 to 2, "requesting the association to cause a warehousing corporation for broadleaf tobacco to be organized in the First and Second districts."

President Alsop and General Manager Fred B. Griffin were present.

Mr. Griffin said the experience of packing the first crop under association direction had shown that a large warehouse in Glastonbury was desirable so that all broadleaf in the two districts could be brought there for packing, sweating and storage. The samples would, of course, be at the headquarters in Hartford for buyers' inspection. Such a warehouse would save a considerable amount of trucking, and if there was a spur track to the warehouse, or a nearby switch, the tobacco could be probably shipped in car load lots.

Mr. Griffin presented tentative plans for the warehouse. He said it should be 300 feet long by forty-eight feet wide, two stories high and have a basement. It should be built of wood and have a sprinkler system.

Mr. Alsop explained the method of financing the corporation, which is given in the letter sent to members.

Ralph G. Tryon, chairman of the First District, presided. Willard G. Phelps, chairman of the Second District, was secretary.

Mr. Alsop, in the letter, recommends the sale of about $80,000 of the capital stock for the erection and operation of the warehouse.

It is proposed, says the letter, to originally finance the corporation after securing such money as may be advisable on a mortgage, by the issue of non-voting preferred stock paying 8 per cent. One-fourth of such preferred stock would be retired annually, probably by lot, by an equal charge against each pound of tobacco handled by the warehouse.

The members would receive in turn, for deductions made, a like amount of common stock, so that at the end of four years the common stock would be owned and controlled by the broadleaf members of the two districts, the interests of each being in accordance with the amount of tobacco packed for him.

The preferred stock would be first offered to members in the districts, and if not all taken by them would be offered to the general public. The common stock would be the stock controlling by vote the affairs of the corporation and the original issue would consist of but one share each to qualify the necessary directors, the remainder being issued from year to year to members, in return made for the deductions made from their tobacco for the retirement of the preferred stock. It is estimated that the deduction would be about one cent per pound annually.

With the letter from President Alsop is enclosed a voting blank to register disapproval not later than August 18. Those who do not return signed disapproval blanks will be understood to favor the proposition to create the corporation.

All of Glastonbury, a small part of East Hartford, and the tobacco towns south of Glastonbury, compose the two districts.

Foreign Exchange Rates

In the subjoined table the quotation on sterling represents dollars and decimals of a dollar; all others represent cents and decimals of a cent. Quotations preceded by the decimal mark indicate a price measured in fractions of a cent.

Parity of exchange is given as reported by the United States Mint, except in countries with a silver standard, where parity fluctuates with the price of silver.

Havana Tobacco Market Rather Quiet But Firm

Movement Not Brisk, But Export Houses and Some Almacenistas Continue to Buy or Make Commitments—Prices Governed by Quality—Vast Difference in Tobaccos from Various Sections.

HAVANA, Cuba, Aug. 9.—While there is very little movement in the Havana tobacco market, the export houses and some of the almacenistas continue buying and "compromising" packings and Vegas. If prices are somewhat lower than a few weeks ago, it is probably due to the lower value of the tobacco itself, the best of the crops having mostly been picked out during the first "culling." The prices asked in the market have not shown any change whatsoever, and although nobody thinks of making any profit to speak of this year, the holders seem to feel confident. The packers and speculators who use to sell only in the local market, that is to say, people without any foreign customers, are sure that their small holdings will not even be enough to cover the demand of buyers, who use to come down to Havana during the fall and winter, when tobaccos are well cured and ready to be worked. Although, considering the high prices paid for the tobacco and the large shrinkage from now to the fall or winter, the holders *would like* to sell. But they do not show any outward signs of being anxious. They seem to rely on the future.

Exporters Sending Samples

Several exporters have sent sample bales and sample-lots to their foreign clients, which show, that the foreign countries, who ought to know the prevailing prices by this time, are trying to do their best.

Large quantities, that is, considering the short crop in all sections, arrive every day, being inspected by the local exporters and foreign buyers, who are at present in Havana.

There is a big difference in the tobaccos from various sections, in quality as well as in cleanliness, and there is no doubt that people, who packed "clean" will get the benefit, as a 3rd Capadura or a Puntilla for instance, which does not give a good proportion of clean fillers, or which is not fit for stripping purposes at all, will have to be thrown sooner or later into the bulk of cutting tobacco, of which a relatively large proportion came out this year.

Importance of Good Packing

I can only repeat, that most of our packers, called this year the "independent packers," that is, those who do no export business, have packed little; but most of them paid special attention to the cleanliness of their packings and put up really good classes, in Remedios as well as in Vuelta Abajo. These people, who buy and do their own packing, without having to pay the high salaries and additional expenses borne by others who are not in it and who partly started packing the first year, will be able to give this advantage to any buyer who visits our market, so that the importers, dealers and manufacturers who have not engaged in any packings and purchases so far, will have a good chance to stay pretty close up with the first party.

Of Vuelta Abajo tobacco for export, the Northern Coast, the Lomas, Remates and Semi Vuelta, there is an excellent selection in the market already. The tobaccos are well selected and well prepared in order to stand a long storage, and although the quality is rather heavy, most of the goods will cure very well.

Some stripping plants have started already, while others prefer to give the tobacco some more storage. Within a few weeks from now, all of them will be busy again.

Northern Buyers in Market

Of Northern buyers there are quite a number in our market, among them are Mr. Fernbach, Matt Wengler from Chicago and Teddy Smith from New York, who is very well satisfied with the purchases a large local packer made and packed for his firm, saving in this way a whole lot of trouble and especially expenses. He has realized one of the best transactions and was very clever in getting a good man for it. His customers will undoubtedly appreciate this.

A splendid packing of Sancti Spiritus tobacco was put up by Muñiz Hermanos at Reina street, and also the large firm in Estrella street of Angel Prieto has several first class packings going on, especially in Sancti Spiritus, Camajuani, etc., receiving besides these, several large packings for sale from other sections, such as Las Vueltas, Fomento, etc.

Of Partido tobacco, mostly wrappers, quite some cigarleaf was sold lately to local and Tampa manufacturers, of whom several of the old timers are in our market.—GALLO.

British Prices Higher

WASHINGTON, D. C., Aug. 15.—"Compared with a year ago, tobacco prices in June, while exhibiting some fluctuations, were on the whole rather higher," says a report to the Department of Commerce from the American Consulate at London on the British tobacco market for June. The report continues in part:

"Imports in June, 1923, totalled 168,229 hogsheads and tierces; deliveries 8,206 hogsheads and tierces; and stock at June 30, 160,023 hogsheads and tierces. The latter compares with, a year ago, 178,552 hogsheads and tierces. Total deliveries for the half year of 1923 amounted to 42,276 against 36,299 hogsheads and tierces in 1922; 31,340 in 1921; and 32,713 in 1920. In the past month deliveries were well above the average.

"The market during the month continued active, the sale made being a full average for Kentucky and Virginia growths, and the lower classes of Brights are now in limited supply. Dark Nyasas also sold well, enquiries for the Bright cigarette types being difficult to fill.

"Although the amount of tobacco cleared from bond for May was less than in the corresponding month of last year, the deliveries to duty paying factories for the five months show an increase over those of the two previous years, and considering the conditions of trade generally in Great Britain this circumstance is considered remarkable."—LAMM.

Buying Connecticut Broad Leaf and Havana Seed

Large quantities of broadleaf and Havana seed tobacco have been sold by independent growers to buyers who have inspected the crop in the fields and who have offered from 46 to 50 cents a pound for it. These prices are for the crop in the bundle. Some Broadleaf crops have sold as high as 55 cents in the bundle. Growers on the west side of the Connecticut river have sold all of their Havana seed tobacco at good prices. Some East Hartford growers have also sold. The American Sumatra Tobacco Co., Meyer & Mendelsohn. I Kaffenberg & Sons and Hinsdale, Smith & Co. are some of the heaviest buyers.—East Hartford *Gazette*.

New Cigar Slogan Hits Popular Chord

The new cigar slogan "After all nothing satisfies like a good cigar" is meeting with a splendid reception by the trade in all sections of the country.

Although announcement of the adoption of the slogan was only made on the first of the month, the T. M. A. office staff is finding it hard work keeping up with the most of requests pouring in from all quarters for cuts of the slogan and identifying design. Thus far, however, there has been no delay in meeting these requests, and it is hoped to fill them all promptly as received.

"Enthusiasm concerning the slogan is not limited to any particular division of the cigar trade," says Mr. Dushkind, Managing Director of the T. M. A. "Assurances of co-operation are pouring in from all quarters, and we earnestly hope that the universal adoption of the slogan which they presage will result in Bigger-Better-Business for the cigar trade."

The following are some of the expressions from the trade:

"We note the adoption of the slogan, 'After all nothing satisfies like a good cigar' which we consider very good and will use without fail in the next advertising that we get out. We think the Committee is to be congratulated on the result of its labors."—WORCH CIGAR CO., St. Paul, Minn.

"We believe it an excellent idea to use this slogan whenever possible, and we intend to use it wherever we can."—DITTGEN PAPER GOODS CO., Cincinnati, Ohio.

"It is with pleasure that we note by your circular dated August 1, that the Special Cigar Committee have agreed upon the Slogan 'After all nothing satisfies like a good cigar.' You will understand that the adoption of a slogan is particularly gratifying to me, because of my having originated the activity for a slogan during the early part of 1922. The Slogan, 'After all nothing satisfies like a good cigar,' is a good one. In fact, it is the best of any of those I noticed among the suggestions—excepting my own."—LEONARD WERTHEIMER, Wertheimer Bros., Baltimore, Md.

"We agree with you that the slogan is an excellent one and will no doubt produce beneficial results."—SCHWAB BROS. & BAER, INC., N. Y. City.

"We think it a very good selection and will give it all the publicity possible."—GEO. M. SCHMIDT, Cigar Box Mfr., Dayton, Ohio.

"We will use it in the most efficient manner. It is a very commendable slogan."—ROBY CIGAR CO., Barnesville, Ohio.

"We wish to state that we will cooperate on same. We would ask you to send us an electro of . . . and in ordering our advertising and various matters, we will be glad to have these inserted."—GANS CIGAR CO., INC., N. Y. City.

"We wish to express our compliments to those gentlemen who were in charge of the adoption of a slogan and also an identifying design to be used generally in the promotion of the cigar business. For our part we wish to say that we will be very glad to include this form of advertising in every form of advertising that we are doing."—JOSEPH J. SCHAEFER, Dayton, Ohio.

"Your slogan circular has been perused with interest and we are heartily in sympathy with this movement. To do our part toward promoting your idea, we are having 100,000 stickers prepared that we will distribute gratis to the trade."—MUELLER & SON CO., Milwaukee, Wis.

"I read with very considerable interest your circular showing final decision in the matter of slogan for the cigar trade. My personal opinion is that you have selected a very elegant slogan, especially when one considers the numerous angles. The more you repeat the slogan to yourself, the better you like it."—JACOB A. VOICE, Pasbach-Voice Lithographing Co., Inc., Brooklyn, N. Y.

"We received your letter advocating the use as a National Slogan of, 'After all nothing satisfies like a good cigar,' which has our hearty approval. Kindly send us cuts . . . for same and we will at once begin using them and feel sure this means Bigger-Better-Business for the cigar trade in general."—REISS-DABNEY CIGAR CO.

"We take this opportunity to congratulate the Committee through you on the wonderful choice they have made and also upon the design selected for the purpose intended. . . . for our part wish to advise that we will go into this proposition heart and soul and have already taken the matter up with our various suppliers in an effort to help the matter along.—AMERICAN BOX SUPPLY CO., Detroit, Mich.

"The idea of a slogan or phrase to be universally used in promoting the welfare of the cigar industry is undoubtedly good, and the phrase adopted is appropriate and well suited to the purpose for which it is intended."—NORTH STAR STATE TOBACCO CO., St. Paul, Minn.

"Will be glad to use this slogan on our stationary and ads."—BRINK-DOLAN CIGAR CO., Kansas City, Mo.

"Notice of the choice of the cigar slogan received by us. We wish to say that it is not only appropriate but a phrase that has many means all of which will have a good tendency in behalf of the cigar industry. The more we have studied this slogan the more we have become enthused and we propose to give it all the publicity possible in our columns, through both the news and advertising matter.—*Cigar and Tobacco Journal*, Minneapolis, Minn.

"We will do what we can to co-operate with you to give this slogan as much distribution as possible."—NEUDECKER TOBACCO CO., Baltimore, Md.

"This is a very good idea and we would like to co-operate and trust that every one in the business will do so."—TINKHAM BROS., Jamestown, N. Y.

"Our association intends to take this matter up very vigorously and we are going to use our best efforts to secure the co-operation not only of all our members, but of the entire cigar box industry."—NATIONAL CIGAR BOX MANUFACTURERS' ASSN.

Requests for Cuts

Among those who have requested cuts of the new slogan and design may be mentioned:

The General Cigar Co., N. Y. City.
Haas Bros., Cincinnati, Ohio.
Kraus & Co., Inc., Baltimore, Md.
F. E. Fonseca & Co., N. Y. City.
Miller, DuBrul & Peters Mfg. Co., Cincinnati, Ohio.
I. H. Weaver Co., Lancaster, Pa.

Key West Key Notes

KEY WEST, Fla., Aug. 11.—Interest this week centered in the announcement that Mi Favorita Cigar factory, with other Park & Tilford holdings will now be controlled by the Schulte Cigar Stores Co. There has been no announcement of any change in the management of the local factory and none is contemplated. Those who are in a position to know say that the change will be of great importance to Key West, for the reason that the 250 stores owned by the Schulte interests will afford a greater outlet for the cigars made at the Mi Favorita factory. Old timers here tell of when Mr. Schulte, head of the chain of stores, was associated with the cigar business in this city, and those who are considered high class workers learned the trade under his management.

Work Resumed at Cortez Factory

The dispute which arose several weeks ago between the management of the Cortez Cigar factory and the cigarmakers has been settled and work was resumed Monday morning. The resumption of work at this factory was of great importance here, as the Cortez is one of the largest factories in this city, and several hundred Key West people gain a livelihood under its management.

It was with keen regret that the news was received here of the death of Henry Abrams in Tampa. Mr. Abrams had many friends here who were deeply grieved to learn that he had passed away.

Exports and Imports

The export business between Florida ports and Cuba increased from $5,079,613 in March of this year, to $5,765,917 in the following month, April, 1923. Key West's exports increased from $2,605,640 in March to $2,930,661 in April this year. Tobacco imported during April amounted to 181 pounds of wrapper, of unstemmed leaf there were 169,310 pounds valued at $125,619. Other tobacco received here is shown to be 90,381 pounds valued at $21,074. Of stemmed leaf tobacco there were 149,324 pounds valued at $166,431. Of cigarette paper, there were 590 pounds imported from Spain through Cuba, and 3 pounds from Cuba direct. This paper was valued at $180. Cigar bands and labels were imported to the amount of 401 pounds valued at $733.

Tobacco exported during the month of April shows 46,334 pounds of bright flue cured tobacco, valued at $3,449. Of dark fired Kentucky tobacco there were 808,935 pounds valued at $191,434. Cigars and cheroots numbering 14,000 were sent to the British West Indies, and to Cuba we sent 2,000. Cigarettes made in the U. S. A. numbered 252,000 sent to the British West Indies during April, but none were exported to Cuba. Plug tobacco went to Cuba to the amount of 65 pounds. Smoking tobacco numbering 162 pounds went to points in the British West Indies, and 7 pounds to Cuba. Of stems and scrap tobacco there were 13,936 pounds sent to Germany, presumably via Cuba, as it is included in the exports from Florida.

E. H. Gato, Sr., head of the E. H. Gato Cigar Co., returned to Cuba this week accompanied by his sons T. H. Gato and F. H. Gato.

Indiana News Items

To Use Cigar Machines

INDIANAPOLIS, Ind., Aug. 11.—"We don't plan at all to turn our factory into a machine factory," said Dan McCarthy, secretary of the Fendrich Cigar Co., Evansville, Ind., in speaking of the twelve machines soon to be installed in the big factory on Oakley street, the biggest cigar factory in the world under one roof and which employs more than 2,000 girls. "These machines are merely being put in on the second floor by way of an experiment."

Price Reduction Seems Paradoxical

A cut in cigar prices has been announced by George M. Platner and Co., South Bend, Ind. The cut, according to statements made public by Mr. Platner, is the direct outgrowth of the remodeling of the cigar store in the J. M. S. building. Recent rearranging of the retail department and the soda fountain and lunch counter has cut the overhead to such an extent that a cut in the price of cigars was made possible. The reduction is not an outgrowth of the drop in the original and wholesale costs of cigars, as one might be led to believe. According to reports received by local cigar merchants, the wholesale cost of cigars may go up. Several of the leading cigar manufacturing companies in the country have reported an increase in the price of pure, high grade Havana tobacco that will amount to an increase of $12 a thousand in the cost of making cigars. However, to date there has been no announcement of a raise in the wholesale prices.

Tampa Tidings

TAMPA, Fla., Aug. 11.—Strouse & Holzman, through their attorneys, Altman & Morrows, have had David H. Austin appointed Receiver for Max Smith, Trading as the Tampa Leaf Tobacco Co. Total liabilities are said to amount to about $15,000.

Ned Berriman is expected back in Tampa from Chicago, shortly.

Open New Branch

Perfecto Garcia & Bros. have opened a branch factory in the building recently vacated by Salvadore Rico & Co., on their consolidation with A. Fuentes & Co. Manuel Garcia will extend his personal efforts to cover the supervision of this branch, which will manufacture the same line of high class clear Havanas as in their main factory.

Jorge Leon, of Hoyo de Cuba fame, is sojourning in New York.

The affable and efficient secretary of the San Martin & Leon Co., A. T. Roilins, has tendered his resignation to take effect as soon as his successor is installed. He carries the best wishes of friends for his success in a new enterprise to be announced later.

Jimmie Marsicano has purchased the interest of his partner, J. Hedessa, in their 12th avenue business.

Gonzalez & Mendez, Inc., have moved from West Tampa to Palmetto Beach (DeSoto Park), and are now occupying the old S. Rodriguez factory building. They have secured Sam Levy, formerly with Park & Tilford, to represent them west of the Rockies.

Joe Perez, accompanied by Mrs. Perez, is visiting the Cuban capital, meeting old friends and looking after tobacco interests there.

Manny Perez has terminated his visit to Tampa and returned to New York.

Among the passengers on Sunday's boat for Cuba, were Celestina Vega and Jose Escalante. On Thursday's boat was Harry Slavinski of the G. & M.

Finest Florida Packing

QUINCY, Fla., Aug. 10.—J. W. Shaw, of the Growers' Tobacco Co., is a thorough enthusiast when it comes to discussing the merits of Florida tobacco. Mr. Shaw says:

"We have the finest packing we have ever had and believe the trade at large will have a much kinder feeling toward Florida wrappers after they have come in contact with our finished merchandise.

"I spent yesterday looking over the Blackshear (Ga.) Bright tobacco market, and I believe we would do well to grow that type here in addition to our shade. We can grow a fine quality here because some was grown this year and brought a good price when sold on the Blackshear market."

Florida Growers Benefitted By Insecticides

TALLAHASSEE, Fla., Aug. 11.—Insect fighting methods introduced by the Federal Bureau of Entomology are saving tobacco growers in Florida more than $85,000 a year.

S. E. Crumb, assistant entomologist of the bureau of entomology at Clarksville, Tenn., is authority for the foregoing statement. These figures he asserted ought to justify the existence of that branch of the service.

"Figures are available in Florida," he said, "owing to the restricted area in which tobacco is grown, and the small amount that is grown compared with other sections. We are unable to point to any definite sum that we are saving the growers in other tobacco growing sections but we feel that our existence is already justified through a better understanding of our work."

Entomologists have been sadly misunderstood, Mr. Crumb said, many people regarding them as a "crazy creature, continually chasing around with nets in chase of bugs on which to try out experiments."

Other notable work of the Clarksville bureau to which Mr. Crumb pointed was the introduction of arsenate of lead and modern dusting machinery in the burley tobacco district, as well as in the dark tobacco section. He said that a new light weight model dust gun invented by the men in that bureau has just been turned out and will be demonstrated this season. The bureau also is working on experiments toward charging insecticide dusts with electricity in order to make them stick better to plants.

Florida produces a high grade cigar wrapper tobacco in several counties the crop in Gadsden county last year being valued at more than $1,360,000.

Protecting Tampa

The long fight of the cigar manufacturers of Tampa to secure protection for their brands against unscrupulous manufacturers of cheap cigars, advertised under the name of Tampa, has been crowned with success, in a decision of the Federal Trade Commission enjoining a firm of Greensboro, N. C., from using the name "Vantampa" for a brand of goods not made in Tampa and having no connection with Tampa.

The order of the Commission is a general one and applies throughout the country. It prohibits the using of the name "Tampa" alone or in combination with other words in "brands, labels or legends on cigars or the containers thereof made in any other place than the city of Tampa, Florida, or the Tampa district, so-called, unless, if the cigars are not made in Tampa, Florida, or the Tampa district, such word or words are followed by words in type or lettering equally conspicuous which state the true place of manufacture."

This ought to "hold" the pirating manufacturers "for a while."

The excellence, popularity and distinctive character of Tampa-made cigars have prompted avaricious manufacturers in other cities and states to use the Tampa name in labeling their products, to deceive the customer into the belief that the cigars are made in Tampa.

Of course, any smoker who has ever sampled a Tampa cigar, will be fooled only once with a North Carolina or other "fake"—but there are thousands of smokers who do not know any better and who "fall" for the deception. The order of the Federal Trade Commission should put a summary stop to the fraud.—*Tampa (Fla.) Tribune.*

Beinhart to Visit Various Tobacco States

QUINCY, Fla., Aug. 11.—E. G. Beinhart, who has been here for more than two months in charge of tobacco plant breeding investigations for the Florida and Georgia Tobacco Growers' Asociation, has taken his leave of this section for the time being, at least. Before returning to his home in Cincinnati, he will visit the tobacco growing sections of North Carolina, Virginia, Pennsylvania, Maryland, Kentucky and Connecticut, and will stop in Washington and New York.

Growers and packers here are hopeful that the expert work done during the brief stay of Mr. Beinhart will result in much future good for the tobacco industry. There is talk of raising sufficient funds to have this well known expert return to Gadsden County and devote his entire time to experiments in plant breeding with a view of securing plants that will be disease resistant. Dr. Tisdale, in charge of the State experiment station here, has also been making some extensive investigations along the same lines, and with two such well-trained experts in the field it is believed at least some of the problems confronting growers could be solved.

Back from Ohio

Harry S. Rothschild, of Cullman Bros., Inc., has returned from a highly successful trip to Ohio.

CAUTION

THE LA ROSA DE PARIS CIGARS are not genuine unless our name (Starlight Bros.) is printed on the labels attached to the inside of the box. Every box bears our name in order to protect smokers against unscrupulous sellers who are trying to supplant the well-known LA ROSA DE PARIS CIGARS by inferior goods.

Detroit Retailers Enjoy Fair Summer Business

Cigar Trade Held Up During July, Despite Vacation Period —Factories Operating on Healthy Summer Schedules— Some Continue on a Full Capacity Production.

DETROIT, Mich., Aug. 11.—July retail business held up very well, despite the fact that many Detroiters picked that month to spend vacations out of town. Factories are operating on healthy summer schedules. Many, in fact, still on capacity production.

Dick Tobin, representing the Falk Tobacco Co., motored into town recently in a brand new flivver. He reports Herbert Tareyton and Johnnie Walker cigarettes going strong out in the state. Both brands enjoy a wide sale in Detroit.

Jack Finn, a Phillip Morris Ace, came to town and has been putting Phillip Morris and English Oval cigarettes over strong.

Lou Erdt, vice-president of M. Melachrino Co., was a recent visitor.

W. C. Foley, zone manager for Phillip Morris & Co., has been surveying this territory.

G. J. Byrne, who covers most of the down town section for General Cigar Co., is away on a three weeks' vacation, at Houghton Lake, Mich. G. J. is one of the old timers in this section, having been with the General Cigar Co. for the past ten years.

Making Satisfactory Progress

Arthur C. Fields, vice-president of Fields Cigar Corpn., tells me he is well pleased with the business of the newly organized company, during the past three months. The new sizes of T-R cigars have made a tremendous hit with the trade, and are repeating fast. Chas. F. Becker is local distributor. A new panetela size has been added to this fast selling line, and is taking on in a big way. Ike Simon, general field man for Fields Cigar Corpn., has been working recently with the sales force of C. F. Becker, and has done some very effective work.

Well Known

Met Harry Bassett a few days ago. Everybody knows Harry, of Tilford fame. Sure, Harry is Michigan representative for Park & Tilford, and has been doing some splendid work in the Motor City on this high powered line of cigars, through Bert Johnson Cigar Co., local distributor. Only the better class trade has been solicited on this quality brand. All the leading clubs and hotel stands feature Tilford at all times.

To Distribute Hav-a-Tampa

The Bailey-Wilkin Co. has been appointed local distributor for Hav-a-Tampa cigars. This popular smoke is well known hereabouts and already enjoys a wide distribution. Hav-a-Tampa cigar is a product of Hav-a-Tampa Cigar Co., New York and Tampa. A strong newspaper advertising campaign is to be started at an early date. Notices have been mailed to the trade announcing the new distributor.

Makes Cheerful Report

"Al" Tobias, who covers the west side for Bernard Schwartz Cigar Corpn., doing missionary work, where necessary, adding additional sizes and general promotion work on R. G. Dun cigars, reports this brand going at a swift pace. Dealers, he says, just can't get enough R. G. Dun cigars. Al says the factory at the present time is in a badly oversold condition. But relief is in sight as a considerable step up in production will be possible when the new factory, formerly owned and operated by F. Vega & Co., on Gratiot avenue, and just recently purchased by Bernard Schwartz Cigar Corpn., gets in full operation. About two hundred cigar makers will be employed at the new plant.

Charles Denby *2 for 15c.*

They satisfy the smoker because they are good, and the merchant because they sell.

New Orleans News

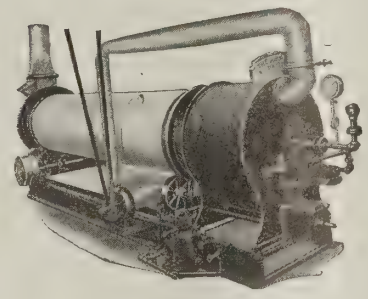
Fresh from Havana Market

NEW ORLEANS, La., Aug. 11.—Manuel Trelles, in charge of the manufacturing nd of M. Trelles & Co., after a brief isit to Havana, Key West, Tampa, acksonville and Savannah, has returned o New Orleans. His observations in ne tobacco belt of the Island bear out ne reports which have reached here bout crop shortage and high prices. While the crop is quite limited, he said, s quality more than compensates for ne scarcity of good, available leaf. This as particularly true of the Vuelta Abajo elt where the highest grade of tobacco grown. The packing houses generally ppear to have good stocks on hand, nough most of it has already been disosed of.

In Mr. Trelles' opinion, the high prices or leaf now obtaining will necessitate an dvance of from $8 to $10 per thousand n cigars containing pure Havana filler, present costs for leaf are maintained. ndismayed, however, by the outlook for ne ensuing year and confident that the gar manufacturing industry will be uite able to hold its own, Mr. Trelles urchased a full year's supply ahead, at pproximately fifty per cent higher than e had to pay for the same quality of af of the 1921 crop. On leaving the sland, Mr. Trelles made a tour of the obacco growing regions of Florida and eorgia, paying a special visit to his disributors in Savannah, Ga., from whom e received a very flattering offer of oods for future delivery.

Taken as a whole, Mr. Trelles said his trip had been very successful and satisfactory, to which statement he added further that he had found upon his return here that things had moved along very nicely in the factory during his absence, under the management of his two younger brothers, who are also members of the firm.

Passes to the Unknown Bourn



Mose Mayer, well and favorably known in cigar and tobacco circles in this city, in former years, has just passed away. He was formerly a salesman for the W. R. Irby Cigar & Tobacco Co., of this city, and subsequently with the Louisiana Tobacco Co., serving part of the time under Mr. DeBen, now vice president of the Crescent Cigar & Tobacco Co., who was associated with the Louisiana Tobacco for a short time. Mr. Mayer is survived by three sons, two of whom, the Mayer brothers, operated a cigar store at Rampart and Canal streets, until compelled to abandon the business by the inroads of progress. An eight-story rooming house now occupying the site, part of which was formerly occupied by them as a cigar store. Mr. Mayer was a 33rd degree Mason, and was buried with full Masonic honors.

Making Satisfactory Progress

A. F. Babin, of Falk & Babin, cigar manufacturers and leaf tobacco dealers, is on a tour of Texas from which territory he has already made himself heard in a satisfactory number of orders for the product of his factory. The Falk & Babin people have made such satisfactory progress with their Triangulares, that they have started putting up their La Fava in this form. They are being put up in neat wooden containers, 50 to the box, in bundles. They have ordered and have received 200 new molds, and with those already on hand are now turning out 4,000 Triangulares a day. They have just received another bunching machine with a new rolling bed from the Liberman Manufacturing Co., of Philadelphia.

Macrino Trelles, who looks after the outside territory for the factory in which he is part owner, has rejoined his family at Biloxi, Miss., on the Gulf coast, where they are sojourning for the summer. He will tarry there until September 1, now that his brother Manuel Trelles has returned to New Orleans.—CRESCENT.

Connecticut Crop Has Another Favorable Week

Period Was Ideal for Growing—Late Set Plants Need More Moisture—Harvesting of Early Crops Well Under Way—Dr. Geo. H. Chapman Resigns from Experiment Station.

HARTFORD, Aug. 11.—Another very favorable week has passed for the tobacco growers in the Valley, the weather having been warm and ideal for growing, although the late set tobacco needs rain. In the Hockanum section of East Hartford the work of harvesting has been pushed, and many of the growers now have a good proportion of their crops in the sheds. Due to the warm weather, curing has started out very favorably. The great amount of gum that is in the tobacco this season gives the leaf quality and weight, and indications are that the crop will weigh much heavier than for several years past. In the northern part of East Hartford and South Windsor, harvesting will start shortly, and the work will be carried along as fast as possible. A large acreage will be cut, not only in this section, but all over the Valley.

Crop Free from "Wildfire"

The crop is of remarkable color and size and is very free from wildfire, rust or storm damage. There is considerable late tobacco, but is coming along fast and present indications are that the poundage of the crop for the entire Valley will far exceed the weight of any one of the past several years. This increased production is what the growers need, as most of them have hardly "broken even" heretofore and need a good crop. In some fields the big type of Broadleaf is of tremendous size, and is difficult to handle without breakage.

Tobacco men from all over the country are being attracted to the Valley, and take trips through the tobacco belts. They concede that the 1923 crop is a "whopper" from all angles of view. A trip through the Valley will show what wonderful progress has been made during the past few years in the tobacco districts by the development of different types and the different methods of harvesting.

In the Broadleaf section there are no less than four different types of seed grown, and each one is almost exclusively grown in districts by itself. In South Windsor and East Hartford, the "John Williams" is the most popular type, while in the Hockanum district of East Hartford, and in Glastonbury, the "Hockanum Broadleaf," Roberts and Bantle types are specialized. These types are large and difficult to cure in the shed, and are liable to "pole-sweat" in a bad season, but many buyers prefer these types, as they are the best yielders for the manufacturer.

On the west side of the Connecticut River, and in Massachusetts, Havana seed is almost exclusively grown, although there are some lots of Broadleaf scattered through the section. The demand for primed Havana is not so brisk this season and most of this type will be stalk harvested. Round tip is growing in favor, and the acreage for the crop has been greatly increased. This type is primed, and indications point to a great future for it, as it makes a very desirable wrapper.

Shade grown, or an acclimated Cuban type of tobacco, grown under cloth, has long passed the experimental stage and today is a standard wrapper. The acreage is being increased, the increase this year being about 2,000 acres. If the crop is it is today can be safely housed and cured without much "pole-sweat," it will prove the highest percentage of upper grades of tobacco that has been produced for many years.

There has been something wrong with the past few crops, due to unfavorable conditions during the growing period, when a longer period of dry weather or too much rain has been experienced, and as a result there was too much low grade tobacco that could not be used in the cigar factories, and the grower "lost out" on his bank account. The Connecticut Valley tobacco grower cannot grow low grade tobacco at a profit, and when his crop yields around 50 per cent of this class of tobacco, as the past few crops have, selling from 5 to 10 cents, he simply has moved from Prosperity avenue to Broke street. The growers feel that the tobacco business is more in their favor this year, with the prospects of a bumper clean crop, and an organization now working under the management of able men to improve marketing conditions.

It is doubtful if there will be enough Broadleaf to meet the demands of buyers who have signified their intention of purchasing.

Insurance Coverage Extended

The Connecticut Valley Tobacco Association has just announced that the syndicate of insurance companies which carry the insurance of the association tobacco in the warehouses had extended the terms of the policy so as to furnish full coverage of their members' tobacco from the time that it is hung up in the curing barns to the delivery of the crop to the association's pools. In case of loss, payment will be made through the association for full value as determined by the association and insurance adjusters. The cost to the grower will be 33⅓ cents per month on each acre and the premium is paid for by the association and charged to the grower, and is made a part of the general packing and overhead charges of the 1923 crop.

President Alsop of the association is meeting with success in negotiating the large open account loans from the banks in the tobacco sections. Thus far each bank has agreed to extend credits from $5,000 to $450,000, according to its lending ability. Thus with sufficient funds at their disposal, without the actually pledged warehouse receipts for each case of tobacco, the association will be able to make the first payment on the 1923 crop as soon as the tobacco is packed and classified, and a check will be sent to each member with his packing report.

With the bumper crop now going into the sheds throughout the Valley, the officers are working out plans for the receiving and handling of it, and at a meeting of the first and second districts held in Glastonbury, plans for a co-operative warehouse for these two districts were discussed. Fred B. Griffin, general manager, said that the warehouse ought to be 300 x 48 feet, two stories high, with a basement, thus it would have a capacity of from 8,000 to 9,000 cases and would care for the tobacco in these two districts. It was estimated that such a warehouse would cost about $80,000.

Independents Selling at Good Prices

During the past few days there has been considerable activity on the part of the packers in buying up the independent crops and prices have touched "high notches" and within the past three or four days one grower is reported to have sold his Broadleaf interests for 75 cents per pound assorted, while others sold at around the 50 cent mark in the bundle.

Danville Concerns Close Million Pound Sale

DANVILLE, Va., Aug. 15.—The Producers Tobacco Co. and allied interests, have just completed details of a sale of a million pounds of leaf tobacco stored here. The name of the purchaser has not been given. The tobacco will be moved out of storage here without delay, leaving additional room for the new crop. It is stated that this big deal will expedite the payment to farmer members of the Co-operative Marketing Association of the final installment of money owing them on the last crop. It is this delay in final settlement which according to some observers, has caused some restlessness among the growers. The third payment, were it made any time soon, would do more than any one thing, it is said, to inspire new faith in the growers' organization.

Favorable Crop Reports Continue

Reports from this section continue to bring good word of the crop. Good growing weather with generous rains have been experienced. In Franklin county however some twenty farmers have suffered heavily from a severe hail storm which slashed both the corn and tobacco crops.—TETLEY.

North Carolina Markets Delay Opening

(Special Telegram to TOBACCO)

WILSON, N. C., Aug. 13.—To meet the wishes of the Imperial, the Export and other companies who are heavy buyers of bright leaf tobacco, the eastern North Carolina Warehouse Association in session here today decided to postpone the opening of all the markets of eastern North Carolina for one week, therefore making the opening date August 28.

There was some opposition on the part of the warehousemen to doing this, inasmuch as the opening has been very extensively advertised, but the representatives of the buying companies stated that as the crop was somewhat late that an early opening would mean just a litt flurry of tobacco coming in and the mair tenance of expensive overhead for a wee so August 28 was finally and mutuall agreed upon.—MCFARLAND.

Fairmont Auction Sale Please Growers

FAIRMONT, N. C., Aug. 10.—A repo of the auction sales at this point since th opening, August 1, shows total sales t date, 950,162 pounds, sold for $201,875.8 an average of $21.25. These figures ar official, as they are from the books c the secretary of the Tobacco Board c Trade. Today, Friday, sales containe many of the better grades and the aver age was $25.78. Farmers are delighte with the prices.

No figures are available as to the Co op. receipts at this point, but their re ceipts continue very light, hardly 5 pe cent of what is being marketed at thi point, although they opened their ware house this season on July 17. But i justice to them it should be said that the opened at least two weeks too early, a they would probably have gotten in th 5 per cent by now had they opened wit the auction houses. Fairmont is one c the nicest and one of the livest littl towns in southeastern North Carolina It has opened for years with the Sout Carolina markets, as the crops are severa weeks earlier than in eastern North Car olina. It draws its trade from the fa mous Indian Swamp section that nearl always, regardless of the seasons, pro duces a very fine quality of tobacco. I is in a county in which three separate an distinct races of people live, with school and churches for each race.

It was in Robeson County, in whic Fairmont is located, that the "lost col ony" of Sir Walter Raleigh settled an being cut off from the mother country-England—intermarried with the Indians They are known locally as "Croatans, for the reason that when the expeditio returned from England to look for th colony left, no trace of them could b found and only the word "Croatan" foun

cut with knives upon the trees, and those who returned to look for them went back to England under the impression they had been murdered by the Croatan Indians, who at that time lived in Robeson County.

Local historians some years ago identified these people as "the descendants of the lost colony," for in their blood flows that of the pure Anglo-Saxon and of the North American Indian, color, features and other evidences making the claim now undisputed. Twenty-five years ago the Croatans of this section were great hunters, silent and almost morose in their dispositions. With the coming of tobacco men to Ashpole, the former name for Fairmont, many of these Croatans began the culture of tobacco and finding it profitable, they abandoned the hunting lodges and settled down as farmers, so that today some of the best farmers in Robeson County are these Croatans. With the coming several years ago to Fairmont of E. J. Chambers of Virginia, O. A. Reeves of Tennessee and E. J. Davis & Sons of Martinsville, N. C., the town took on new life as a tobacco market, for these men were all trained and experienced tobacco men and of the very highest standing in the towns from which they came. They put new life in the tobacco industry of Fairmont; induced the Imperial Tobacco Co. of Great Britain to locate one of its factories here, and thus have put upon the map in great big letters, the name of Fairmont as a tobacco town. It is now one of the 5,000,000 pound markets of the South Carolina belt. Maybe, with the increase in acreage this year, its sales will run to 7,000,000 or 8,000,000 pounds.

Upon information and belief, up to this writing in the South Carolina belt, the auction markets have sold around 9,000,000 pounds. Reports from Timmonsville, S. C., Lake City, Mullins and other large markets indicate auction sales each day running until well after noon sometimes as late as four o'clock in the afternoon. Mullins and Lake City both run double sales. Mullins reports heavy sales all the week.

The Co-ops are receiving very little. It is reported that at some of their warehouses where the landlord had delivered part and his tenant, not having "signed," delivered his part to the auction markets, that in settling with the landlord the Co-ops before paying his advance penalize the tenant with five cents a pound, who had not "signed" and deducted it from the advance made the landlord who had "signed" and was carrying out his contract, but then, one hears a great deal which is not true about these things. The association is certainly not strong enough in either of the Carolinas to maintain a law of their own making—McFarland.

Favorable Weather Around Oxford

Oxford, N. C., Aug. 11.—The weather for the past two weeks has been most favorable on the growing crops. We have never seen late tobacco show such rapid growth and come into top almost within a month.

In our drive of the past two days, we have seen some good curings, both primed and cut which shows color, quality and ripeness.

If the seasons remain favorable and not forced to house the crop too rapidly, it should work out a very good one. There is a tendency, on the lighter lands especially, to burn; due no doubt to the recent wet weather followed by the extremely warm weather of the week.—W. A. Adams Co.

Reports Higher Prices

Greeneville, Tenn., Aug. 11.—C. B. Austin, of the Austin Co., has returned from a two-weeks' stay in South Carolina, where he was investigating Southern tobacco markets. He reports that the markets have opened up well, with prices equally as good as those of last year, and states that he thinks prices will be satisfactory this year.

On Fishing Expedition

Joseph Cullman, Jr., is again angling at Belgrade Lake, Maine, where the bass are reported to be biting this week.

The Carolina Tobacco Crops and Markets

GREENVILLE, N. C., Aug. 13.—The date for opening the eastern Carolina markets has been changed from Tuesday, August 21, to Tuesday, August 28, one week later. This was done because tobacco is a little late and there is much curing yet to be done.

In Pitt County curing is well advanced and most of the curing will be over after this week. Though the crop is good, and has generally cured well, there is some late tobacco which will not be so good. There has been but few days without showers since July came in, and some of these showers have been heavy rains. This has given some tobacco a second growth and kept much of it green, which has been a great aid to the farmer, as it has been ripening almost as fast as it could be properly taken care of. In fact there has been some loss on account of this fast ripening. Rains, second growth and firing up have hurt the crop, perhaps 20 per cent, certainly not less than 15 per cent. The yield will be much greater than last year, but these and other causes have cut the crop, as before stated. Curing has been rushed the last two weeks, but September will find curing still in progress.

A ride through some section of Lenoir, Wayne and Greene counties shows very fine-looking tobacco, with prospects of a great yield. But much of it is the second growth, green, and will not cure well. There will be loss, too, from drying in the stalk. Indications were that fifty per cent of the crop seen was still in the fields. Much of it will be little good. But there was much very good tobacco.

The South Carolina markets have had a jubilant effect. Prices have been good. Much has been marketed. The Co-op has really handled a very small percentage of that marketed up to date.—HENRY T. KING.

Tobacco Barn Burns

MT. STERLING, Ky., Aug. 11.—Fire of unknown origin today destroyed a large stock and tobacco barn belonging to Jo W. Fogg, three miles from this city. B sides the barn, a large silo, hundreds tons of hay, all farm implements a milking machinery were destroyed.

The loss will reach more than $6,0 with about $2,700 insurance.

Experimenting With Tobacc Insect Pests

LEXINGTON, Ky., Aug. 11.—Jose Milam and W. B. Weakley, represent tives of the department of agricultu working out of the Clarksville, Ten office, are in Kentucky experimenti with insect pests attacking the tobac crop of this section. They have visit Fayette, Bourbon, Harrison, Woodfor Jessamine, Montgomery and Clark cou ties within the past two weeks expe menting with arsenate of lead, Pa green and other insecticides, and th relative effect on the insects attacki tobacco.

The grasshopper problem has be solved by Fayette County farmers, aid by the special agents and the expe ment station, whose facilities have be placed at their disposal, by the use a bran mash, 50 parts ordinary br one of Paris green, mixed with wa to which has been added the juice lemons, three lemons being used to gallon and a half of water. The gra hoppers eat this bran, and on the fa of John L. Buckley, in Fayette Coun 21 dead grasshoppers were found to t square yard the day following the pu ting out of this bait. It is used at t rate of about 35 pounds to the acre.

On the farm of Hon. C. C. Patri the grasshoppers had done considera damage to tobacco and the bait did lit good, because of the proximity of blue grass field, from which thousa of the insects would go into the tobac patch. By the use of a trap, construct of wood and tin, containing a pan of o the trap being so made that when haul across the field the grasshoppers jump into the machine and into the oil, t field was cleared of the pests, 235,000

urley Tobacco Men at Gallatin Gathering

GALLATIN, Tenn., August 11.—A great eting of farmers and their families s held at the Sumner county fair- ounds here today, a free barbecue be- served visitors, given as a compli- nt from local business men. The akers were Hon. Homer Hancock, nmissioner of agriculture; Ralph rgan, of the extension department of University of Tennessee; J. F. rter, President of the Tennessee Farm reau Federation; Harry B. Stevenson, uthern Field Agent of the American rsey Cattle Club; Ralph M. Barker, Carrolton, Ky., director of ware- uses of the Burley Tobacco Growers' -operative Association, and J. Sher- n Porter, editor of the *Burley To- cco Grower*, of Lexington, Ky.

Hon. Edward Albright, former U. S. rshal, editor of the *Sumner County ws*, presided and introduced the akers. Considerable enthusiasm was nifested and the speakers were given cordial reception. Probably five hun- d persons attended the meeting, part the speeches were made in the morn- and part in the afternoon.

Mr. Barker's address especially was interesting one, as he went into the tory of co-operative marketing of rley tobacco and, in a straightfor- rd, businesslike way, discussed the blems of the tobacco grower, using guage which, while at times very nted, evidently met with the approval the audience, judging by the applause. Mr. Barker told the growers of the gress made by the Burley co-opera- e in selling the 1921 crop at an ad- ce of 9 cents a pound over the price d for the 1920 crop and said that of 197,000,000 pounds signed up and ivered to the association all but 37,- ,000 pounds had been sold. He said t this 37,000,000 pounds had been dried in the association's own re- ers and that it is being held in the ociation's own plants until the market ready to absorb it at fair prices.

Mr. Barker said that if the tobacco p of 1922 had been marketed in the way the growers would not have eived for it as much as they have eived by 10 or 15 cents a pound. He gratulated the growers of middle Tennessee on their business sense in coming into the pool and declared that east Tennessee growers would have opportunity to join the association, if they desired to do so, at an early date.

Missouri Growers in Burley Association

LEXINGTON, Ky., Aug. 11.—Missouri has taken her place among the Burley Tobacco Growers' Co-operative Association, the committee of Missouri growers and business men having the organization in that state in charge having declared the pool on with a sign-up of more than 77 per cent of the tobacco acreage in the neighborhood of Dearborn and Weston.

The committee was authorized to turn over contracts pledging more than 2,000,000 pounds of tobacco to be marketed through the association and Director of Warehouses Ralph M. Barker was requested to make arrangements for the establishment of receiving plants at Dearborn and Weston, in Platte County.

Some of the field service representatives sent to Missouri to aid in the sign-up campaign will remain for a time to aid in signing up the remainder of the outside acreage, the committee being of the opinion that all the outsiders now will come into the association. Other counties in Missouri will also be visited until all growers have had an opportunity to join the association.

Off to the West

Alfredo Selgas, of Selgas & Co., importers and packers of Havana and Porto Rican tobacco, of 128 Water street, is off to Detroit, and has planned an extensive tour of the western territory.

En-Route for Europe

Benno Rosenwald, of E. Rosenwald & Bro., accompanied by his wife, sailed for Southampton last Saturday on the White Star liner *Majestic*. Mr. and Mrs. Rosenwald plan to stay on the other side for some considerable time and intend to visit the principal places of historic interest and the leading seaside resorts of England and the Continent.

Paducah Prospects

PADUCAH, Ky., Aug. 11.—There is nothing to report on loose receipts. Practically all of the crop has been delivered and what remains in the country is of small consequence.

We are now getting up complete statistics of the production of the 1922 crop. The total will miss 88,000,000 pounds but little. Our estimate in the fall was from 85,000,000 to 90,000,000 pounds.

There have been more inquiries than usual for common lugs but stocks are about exhausted. There are, however, several hundred hogsheads available in dealers' hands that are held at higher prices than the present market and no sales have been made that have been reported. There has also been considerable inquiry for common and medium leaf and a few lots have been sold privately by dealers at prices ran from 12 to 25 cents. I understand Association has made some small s but what quantity or prices have been given out.

The past week has been very unfa able on the growing crop. We have too much rain over the entire dis and considerable damage has been the crop, especially in the flat and lands. It is hard to estimate the ex of the damage at this time but no d something like 10 per cent of the has been ruined from drowning or o flow. Then the damage from Frenc is considerable. On the other hand bacco has improved on the hill There is still danger of disease settin on account of too much moisture and land being too hard baked for fur cultivation and we will have to wait time to see the final outcome.—W. KENNEDY.

Drive for Co-op. Mem- rs in Stemming District

PKINSVILLE, Ky., Aug. 13.—The veek was an active one in laying the ation for the membership drive to ıducted by the Dark Tobacco Grow- Co-operative association in the ning district. Among the leaders in ssociation work who are giving their ıal aid and presence are Clifton , chief of the field service division; . Cooper, director of warehouses; Farley, of Henderson, director; /. Cooper, of Henderson; W. I. La- campaign chairman for Henderson y; W. H. Ogden, county chairman ebster county; Tom Waller, chair- or Union county, and several others. number of meetings have already ıeld and the situation is reported to good shape and prospects excellent large signup. In a speech at Hen- ı, R. E. Cooper emphasized the ity for community effort in support- nd strengthening the association. address was heard with closest at- n by a large audience composed of ess men and farmers.

"If the prosperity which the association has brought to the communities in the area covered by it is to continue and increase, it will be necessary for every element in the towns as well as in the country, to co-operate heartily in the coming drive," said Mr. Cooper. He pointed out that the association must grow in order to keep up with changes of crop territory and, "in order to demonstrate to the buying interests that it is such a virile organization that it cannot be overlooked as a market factor."

"There is one large buying company," Mr. Cooper declared, "that is waiting for some sign of weakness in the association to concentrate its forces for an attack; we must protect ourselves. In protecting ourselves we protect every other grower to a certain extent, and any force or institution which has done, and is doing, as much for all communities served as the Dark Tobacco association deserves the support of every man and woman in it. And this is the time to show colors. Only by actual work can those who approve the co-operative plan of marketing prove it."

nnounced for the several counties have een made. Union county poolers will ake a united effort to obtain new mem- ers on Wednesday, August 22. This ill be preceded by a rally in Morgan- eld on August 18 at which John R. lanks, the Billy Sunday of co-operative arketing, will speak. The drive in Hop- ins county is set for Thursday, August 3 and in Henderson county for Friday, August 24. The workers in Henderson ounty will meet in Henderson the pre- eding Saturday to hear Clifton Rodes, ead of the field service division, speak.

The splendid success achieved in the nembership drive in the One Sucker dis- rict, which was the first test of this sort o be made since the organization was efinitely launched, has enthused all the eaders. More than 5,000 new members ere added to the association lists in the temming district. As soon as the Stem- ing district drive is completed the iembership campaign will be launched in ie Dark Fired and the Green River istricts.

W. M. Fallon, tobacco representative f the War Finance corporation, arrived ere a few days ago, to appear before the oard of directors. His business is in eference to a loan to be made to the as- ociation. Discussing the association, Mr. Fallon said: "My investigation of the association is highly satisfactory, both as to its condition, credit standing and the manner in which its affairs are being handled. Everything seems to be going along in good shape and the feeling of the people in general toward the association appears to be excellent."

Soon after the association was definitely launched the War Finance corporation extended a credit of $7,500,000. Since then this has been only partially drawn upon, the needs of the association having been very largely taken care of by the banks of this section and some of the larger cities. While in this section Mr. Fallon will make a visit to a number of the association centers and thoroughly investigate conditions in each of these. He has been here, and through the district, several times already, and is in close touch with the affairs of the big grower organization.

Interested in Election of Directors

The election of directors for the coming year is a matter in which the membership is now showing a lively interest. This election will be held next month, the usual form of association procedure to be followed which calls for election of delegates at county mass conventions on September 5, and election in turn by these delegates of the directors, one from each of the 23 districts, on September 22. These directors will meet and elect the officers and also elect two directors at large, one from Kentucky and one from Tennessee.—M. E. Bacon.

Greene County Has Bright Crop Prospects

Greeneville, Tenn., Aug. 11.—The rains of the past ten days have had marvelous effect on the Greene County tobacco crop. The long weeks of unbroken drouth were beginning to tell on the weed, which was getting in bad shape, but the drenching showers which have fallen almost daily recently have brought it out, and the crop now bids fair to be one of the best and finest yields per acre in the history of the county. This coupled with the immensely increased acreage will swell the number of pounds sold in Greeneville this year.

Owensboro Outlook

Owensboro, Ky., Aug. 11.—Excessive rains during the week have been somewhat hurtful in localities of the Green River district and a moderate percentage of the crop has been very much injured or totally destroyed. However, that part not injured by the rains is doing nicely and making rapid growth.—J. S. Phelon.

A Smoker Blind-Folded or with His Eyes Closed

Can not tell whether he is smoking a cigar having a dark or a light wrapper.

Cigar manufacturers know that the mildness or strength of a cigar is governed solely by the Tobacco in the filler.

We feel that the consumer should be educated by means of a publicity campaign to the fact that when he wants a pleasant mild smoke it makes no difference whether he chooses a dark or light wrapped Cigar.

It is conceded that no Tobacco in the world combines so many essentials to the making of a good mild cigar as Porto Rican. Besides being aromatic and fragrant it possesses practically no chlorine and therefore burns evenly and freely.

This year's crop is of exceptional quality, which means that a treat is in store for the American smoker, as Cigar Manufacturers throughout the entire Country are realizing more and more that Porto Rican Tobacco used as a filler exclusively or blended with other Tobacco makes a cigar which pleases the majority of smokers who prefer a mild but fragrant cigar.

San Francisco Again Turning to Trade Activity

A Day of Intended Celebration Was Thrown into One o Mourning by Death of President Harding—Necessity Calls for Early Renewal of Business Activity.

San Francisco, Cal., Aug. 7.—The death of President Harding in San Francisco turned what had been intended as a day of celebration into a day of mourning. The afternoon of the day following the sad news, all traffic stopped, the stores were closed, and the city went into mourning; the more pronounced and striking because of the sudden and unanticipated change of program.

But the great tide of human events cannot stop even for the greatest of men, so the hum of industry and trade of necessity is as loud and insistent as before. The necessity seems imperative. The Pacific is rapidly being reduced to a good-sized pond as the Atlantic has been. Trans-pacific trade has tripled since the war, and it is up to the West Coast to accept the challenge of the new call of commerce and civilization; and with the help of eastern capital and eastern industry it is rapidly doing so. The bay region has never seen so rapid a period of real growth and home construction. Oakland, east of the bay, has seized the pennant of leadership, and is constructing more homes in proportion to population than any city on the Coast.

Getting into Working Order

The Petri Cigar Co. is slowly getting its new plant into working shape. It is already operating on a very extensive scale, though so far confining distribution to intensive work in California and Arizona. P. A. Bricca states that their jobbers all along the line have been doing loyal work, so that their cigar has been gaining ground. In San Francisco, their jobber, the Rinaldo Co., has in a few months increased orders 100 per cent. The Petri Co. is preparing to put on a five cent machine made cigar to be labeled Fair Way. It will be ready for distribution in about a month.

Takes on Imporico

The Rinaldo Cigar Co. has added to its stock a Porto Rican cigar, the Imporico. This is in response to the call of the independent dealers for such a cigar, with margin enough to justify their handling it. They have large and well-made sizes at 5c, 10c and two for 25c.

Manilas Have Heavy Placement

Henry W. Peabody & Co. report that their Manila cigars are having heavy placement, especially the Flor de Intal and La Plantina. They handle a number of other brands; also special factory brands and find the whole Manila trade from Chicago west constantly growing.

His Two Best Bets

Milton Glass, the popular salesman who talks the products of the American Cigar Co. and Havana-American Co., into every stand he bumps against, has just returned from a frolicksome vacation. He took in the famous Tia Juana. Of course the bull-fights and horse racing are interesting diversions down there; but Milton says the two best bets he saw were Belmonts and Chancellors.

Saw State at Its Best

E. Horn, of the Golden State Leaf House has just returned from a month's automobile trip through the south part of the state, accompanied by his family. He reports a delightful trip, with but few hot days in the San Joaquin valley. They made the valley, the coast, Fresno, Los Angeles, San Diego, and the beach resorts; and got to see California at its best. Harold Horn is now taking a tour "in the open."

A. Czarnecki, the Frankel, Gerdts & Co., salesman, is making the south coast to Los Angeles and will return through the San Joaquin valley. On his recent trip to Humboldt County, he found everything flourishing.

Lorillard Branch Manager

Stephen L. Crocker has been placed in charge of the P. Lorillard Co. branch in San Francisco, and is busy getting acquainted with the trade and with the condition of things in his new territory.

The Rinaldo Co. reports that the campaign for the San Felice has been so successful, that they are oversold, and have been obliged to send in hurry-up orders.

On the Links

Dick Bythener, the golf enthusiast, of E. Rosenwald & Bro., is spending his vacation in polishing up his game on the links of the Inwood Country Club, Long Island.

Spokane Dealers Answer Complaint

Washington, D. C., Aug. 15.—The Federal Trade Commission has received an answer to its complaint in Docket 1032 against the American Tobacco Co. from a number of wholesale tobacco dealers of Spokane, Wash.

The dealers deny that: "they were informally organized in any manner or form, or that they associated together or co-operated together for the purpose of fixing discounts or prices for the purchase and sale of tobacco products, except that these respondents did, for the purpose of preventing such tobacco products from being sold at a profit less than the cost of doing business, undertake to fix prices for the resale of certain tobacco products where such sales were to be made and consummated solely within the state of Washington and not otherwise."—Lamm.

Root Rot Resistant Strain

Somerset, Ky., Aug. 11.—That the root rot resistant strain of burley tobacco developed by the Kentucky agricultural experiment station can withstand the attacks of the disease root rot, thereby decreasing heavy annual losses suffered by leaf growers, is being demonstrated by Pulaski county farmers who are growing the resistant strain in comparison with common varieties, according to a report of County Agent W. C. Wilson. There are 28 demonstrations of this nature being conducted in the county by farmers who are co-operating with the extension division of the College of Agriculture at Lexington.

Pennsylvania Market Going Along Very Quietly

Trading Characterized by Steady Stream of Small Transactions—Many Inquiries Concerning 1921-2 Tobaccos—Sampling Pleases Packers—J. G. Reist Dies Suddenly.

LANCASTER, Pa., Aug. 13.—The slow current of midsummer sales continues to flow lazily in the Lancaster market. Trading, while not very brisk, is consistent, and a steady stream of small transactions keeps the market moving. This ever present interest in Pennsylvania and the continued demand, even during the slack season, is an indication of the great stability of the local industry and the capacity of the market to absorb the output of Lancaster grown cigar leaf.

Closing Up Old Stocks

Many inquiries arrive at local warehouses concerning both 1921 and 1922 tobacco and give promise of a thorough clean-up of all goods by the time the Fall buying is completed. Most interest is displayed concerning the stocks of low grades and black rot of the 1922 crop. One independent packer is reported as having sold a quantity of the damaged goods for filler use at a price in the neighborhood of 13 cents per pound, and indications point to much of this quality cigar leaf being bought similarly.

Bayuks Still Buying

Bayuk Cigars, Inc., have continued their activities in the Mt. Joy section and have made purchases aggregating 1,500 cases. This includes practically all of the holdings of the Mt. Joy "co-ops" in addition to several other small packings. No other notable sales are recorded for the week and the remainder of the transactions were small. The price remains firm and shows no signs of breaking. Neither does it exhibit any tendency to soar and all sales to date were made, allowing for differences in quality, on practically the same terms as the early season transactions.

Samples Show Up Well

The majority of the packers are at the present time sampling their goods. The leaf that was subjected to the bulk sweat is coming out in excellent shape, and in some cases packers have reported 100 per cent good tobacco where this treatment was given. The case sweat goods naturally contain considerable tobacco that is rotted, and damage will run high where the natural sweat was employed.

Have Fine Havana Type

Growers of Havana tobacco in the river section about Washingtonboro can boast of a fine crop this season. The leaf is finely developed and will yield heavy. Many of these farmers are already cutting their crop, and the curing sheds are beginning to fill up. The acreage of this type of tobacco in Lancaster county is, of course, small and will count for but little in the aggregate output of tobacco; but the Havana industry is, nevertheless, significant. It was not so many years ago, and easily within the memory of many growers, that more than half of the tobacco growers in the county raised Havana. Repeated failures of this type and the proven fact that only a limited area was adapted to its culture have restricted Havana growers to a small coterie along the river who annually make a great success of their specialty.

Important Experiments

Although the highly diversified Lancaster county farm is the stabilizing factor in the local tobacco growing industry, the rotation of the various other crops with tobacco has often proven the source of trouble. The definite relation between farm crops and tobacco and the effect that corn, wheat and hay have h upon the seedleaf has been determin heretofore largely by guess. The fir definite data on the subject has be gathered this year by Otto Olson, Fe eral Tobacco Expert, at his experiment station at Ephrata. Mr. Olson h shown that, when wheat follows tobac in the rotation, the yields of both cro bear an inverse ratio to each other. heavily fertilized and heavy yielding t bacco field was productive of the lowe yield of wheat the following year, M Olson proved. The experiments w continue next year with hay planted the wheat and tobacco will follow t grass.

Benefit Would Be Great

Should a definite system of rotati and fertilization be evolved from the experiments, the benefit to the tobac growing industry would be very gre When conclusive results may be dra from the work at the end of sever years' experiment, it is altogether po sible that fertilizers and the rotation schemes now employed by growers m be "jockeyed" about so as to produ even a better grade of tobacco than now grown and in larger quantities.

Veteran Tobacco Man Passes Awa

John G. Reist, veteran tobacco man Mt. Joy, died suddenly last week as result of a stroke of paralysis. A gro er and packer for some two score yea the founder and leading spirit of t chain of co-operative warehouses in t country, Mr. Reist, who devoted t larger part of his time and energies the improvement of the tobacco indust in the country, was extremely acti until the day of his death and died "the harness" while on a trip to Baltimo for the purpose of inspecting the fert izer plant, through which the Lancas County Farm Bureau will purcha goods for the growers. Mr. Reist ganized and fostered the Mt. Joy operative packing plant, and was president since its inception in 1919. was very active in the affairs of the La caster County Tobacco Growers' As ciation throughout its memorable histo of thirty years, and was closely identif with all of the various growers' act ities in the county.

Inspection Tour August 20

The thirty-first annual run and au mobile inspection tour of the Lancas County Tobacco Growers' Associat will be held on Monday, August 20. T itinerary of the trip will include the bacco sections about Landisville, E Petersburg and Lititz, and the party w finish the day with a survey of the wo done at the Ephrata Experimental S tion. It is expected that hundreds growers will attend this event which the largest of its kind held in the ea Frank P. Willits, Secretary of Agric ture, will address the growers at a sh meeting at Ephrata.—KEYSTONE.

Polish Match Excise

WASHINGTON, D. C., Aug. 14.—T Polish excise tax on matches was creased on June 27, 1923, from 80 to Polish marks per box of not more th 60 matches, according to advices fr Consul General Kenna, at Wars Owing, however, to the low excha value of the Polish mark, Mr. Ke states that this tax is not expecially s nificant.—LAMM.

reports of the large British to- and pipe export houses now being ed refer to the curtailment of oreign business during the past aused by the currency troubles of ean and South American coun- At the 42nd annual meeting of Brothers & Co., Ltd., London, W. ilsdale, chairman of the company, ewing the operations during 1922- ched upon the outlook for foreign s in the coming year, and was give a little encouragement to ckholders. He said:

the last occasion on which we ad the opportunity of expressing the feeling of quiet confidence hich the directors looked forward future; not ignoring, then, the position of industry in general, luly emphasizing difficulties that common lot of all who are con- with our national trade and com-

confidence has been justified and ectations realized in the year that review. After a consideration of the financial position that is now disclosed as the outcome of a year of exceptional prosperity, we have the satisfaction of looking forward to the future with courage and increased confidence.

"I wish, however, at the outset to remind you, or utter a warning that present conditions in the industrial world make it impossible to forecast a future that is still full of uncertainty and doubt. Whatever efforts we put forward in the development of our trade, we are constantly confronted with measures for the control of industry by our own and foreign governments, which influence our trade in a manner that we can neither foresee nor control.

"The hopes and anticipations formed during the last four years for peaceful co-operation among the world States that had been well night hurling themselves to destruction in the world war have, unfortunately, not been realized, and the new conditions under which British trade will be carried on in the future, while still a matter of doubt and uncertainty, are nevertheless very different from those that we had anticipated.

"The present is a time of disillusionment, and we recognize that the old States and the new-created ones approach the future with very different ideas from those that we, in this country, have cherished. The ideal of mutual good will, free exchange of resources, and unhampered trade between these various nationalities scarcely exists, and the desire among Eastern and Moslem races to free themselves from the tutelage and direction of the Western world is emphatic and persistent.

"For England the consequences are, of course, of considerable gravity; and a marked curtailment of our export markets with such countries may be immediate, although I trust not an enduring, result.

"The prospects for the business of this company, however, are bright and hopeful, and it is only so far as these may be interfered with by *force majeur* that I would sound a note of warning and of caution; but let us turn to a more cheery subject, *i. e.*, the consideration of our accounts for the year ended March 31, 1923."

Baltimore Market

BALTIMORE, Md., Aug. 9.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND: Receipts increased to 2,167 hogsheads, while sales decreased, being 1,074 hogsheads for the past week. There seemed to be a slight easing off in prices for some grades, while others sold at outside quotations.

OHIO: Receipts 38 hogsheads; no sales reported.

America's Foremost Cigar

Philadelphia Pleased With Fall Trade Outl

Manifested by Activity in Cigar Leaf Transactions—F Rican Purchases Are Particularly Lively—Busines Smaller Cigar Factories Stand Out Prominently.

PHILADELPHIA, Aug. 14.—Convincing evidence of the confidence the manufacturing interests have in the excellence of the fall market outlook is afforded by the report of the leaf houses. August, in this trade is not ordinarily as dull as it is in many others, but not for a long time has there been such activity in all branches of leaf buying, and particularly in Porto Rican, as just now reported. The advance in price, whether as result of that great activity, or whether a contributing cause for it, certainly has not deterred buying, not only for immediate requirements but for sometime ahead. Of course activities have mainly been on the part of the smaller and medium sized manufactures, because the largest producers, with national distribution, long ago made provision, and as a matter of fact, have on hand supplies adequate for some time to come.

Conspicuously Active

Incraese of business for the small and medium factories was the outstanding development of the week. There better business is interpreted as an indication of a growing demand locally and nearby, for it is to this trade they particularly cater. As for the largest distributors their oversold condition shows little improvement, not only because orders continue to pile up but also because of the long vacations taken by competent workers.

Still Able to Buy Smokes

Return vacationists now exceed in number the outgoing, and although those who are back are "short in purse," it has not at all affected their buying of cigars and particularly of cigarettes. Both transient counter and box sales are reported this week to be larger than they have been at any time since the 4th of July, and though the retailers are jubilant, they still are confident that it is but the beginning of a larger measure of prosperity immediately ahead and which will most markedly manifest itself after Labor Day.

In New Congress Headquarters

Artisans still are competing with executives of the Congress cigar Co., in space occupation in the new home at 3rd and Spruce streets. All the company officials are now located there, together with all the clerical force. These offices, with their exquisite effect in walnut panellings and carvings, constitute the handsomest in the cigar manufacturing business in this country and unquestionably will be the show place of the industry. Headquarters were visited during the week by Charles Bock of the Bock-Stauffer Co., of Pittsburgh, a La Palina distributor, Sales Manager Willis A. Andruss, acting as host.

Bayuk News

William G. Kimber, Jr., credit manager for Bayuk Cigars, Inc., is seriously ill in the Presbyterian Hospital, suffering from a nervous break down. Louis A. Kramer of the corporation, is spending his vacation at Balls' Camp, Maine. Victor Marks of the sales force, who is doing special missionary work with the Neudecker Tobacco Co., Baltimore, called at headquarters during the week. The company has been informed that the New York Stock Exchange has ruled that transaction to and including September 3 in Bayuk Cigars, Inc., 7 per cent Cumulative Sinking Fund Preferred stock and common stock may be settled by delivery of either certificates bearing name of Bayuk Cigars, Inc., or Bayuk Brothers, Inc., but that after that date only certificates of Bayuk Cigars, Inc., will constitute a delivery.

Stand Changes Hands

The cigar stand, newly opened at 7th and Chestnut streets, changed hands during the week and is now under the ownership of H. Marion.

The stand in the new Jefferson Building, 10th and Chestnut streets is being conducted by Harris & Harris, br not heretofore engaged in the David Harris is actively in charge stand.

Creditors to Get Settlemen

Creditors of the Cigar store a and Market streets, until recently ducted under the name of Abe an with Abraham Rendleman in char Patrick Hennessy behind the count pect to receive settlement of their on the basis of fifty per cent ca fifty per cent notes. The stand i being conducted by the Ruyera Co.

Sell Leasehold

Yahn & McDonnell have sold th held by them on the property 1508 nut street, which has ten years to the Provident Trust Co., for $1 Yahn & McDonnell leased the pr in 1918 for a fifteen year term at nual rental of $18,000. For four it was occupied as a cigar stand, store and restaurant. Early present year their establishment closed and a temporary lease was with a financial institution. The $1 payment by the Provident Co., f next decade is a bonus, because assume the $18,000 rental.

Buys Residence

Samuel Paley head of the Co Cigar Co. has purchased the reside Sedgwick and Stenton avenues, fr W. Mark. It occupies a lot 135 feet and was held for sale at $75,0

Hope to Clear "Mystery"

Through the arrest last week o bert Fein of 41st and Poplar stree police hope to solve the "myste swindling of 20 cigar dealers in weeks. In one specific case and testimony of Frank P. Will Sales ager of the G. H. P. Cigar Co., Fe held in $500 bail for Court. Imme after the first hearing Fein, who years of age, was held on another of larceny preferred by I. Minsk Diamond street. Testimony pr showed that Fein, misrepresentin self as an employee of the G. Cigar Co., called retailers on the and asked if they could accom with a loan of a few hundred ci meet a pressing demand. A boy was sent for the goods. The poli lowed Isadore Rush, 14 years ol he met Fein and handed over boxes of cigars, preliminary in tions having been made by detecti ployed by the G. H. P. Co. F tempted to escape, but was caugh boy told the police of several trips made at Fein's instigation. He w over for court under bail. The Minsky caused Fein's re-arrest.

Frings Brothers, widely knowr Philadelphia, jobbers and manu ers, during the week took title to ing in Pottstown, Pa., to be us cigar manufacturing purposes.

Retired Farmer Passes Aw

News was received in this city the week of the death of Edw Mickey, at the age of 77 years, in ville, Pa. Death was due to a co tion of diseases. He was a farmer and tobacco dealer, and prominent member of the Church Brethren.

The local office of the Departr Commerce, in the Witherspoon B Juniper and Walnut streets, has r requests from China for machin sealing cigarettes in tins.

Confidence of cigar manufactu York County in the future of the try is evidenced by many building tions in progress there, the lates the new building of the East F Cigar Co., and of Harry L. Ha Red Lion at Spry. The latter is one of the best cigar factories in trict although it will be only of m size.

Answer Federal Trade Complaint

WASHINGTON, D. C., Aug. 7.—Haas, aruch & Co., of Phœnix, Ariz., have led an answer with the Federal Trade ommission in Docket 1031, which is a omplaint issued against that company id others.

The firm makes a general denial of ie charges made against it by the Trade ommission. In its answer the firm lenies that it is now or at any time as associated or co-operated with the her respondents for the purpose of fix- g discounts or prices for the purchase or sale of tobacco or tobacco prod- cts in the state of Arizona or any her state in the United States."

General Denial of Charges

In making its general denial, the firm ates further: "This respondent denies iat in the year 1921 or at any other me, for the purpose or with the effect eliminating competition among the spondents or among sub-jobbers of gars or cigarettes or other tobacco oducts, or among retailers thereof or nong manufacturers thereof, or for the irpose or with the effect of restraining terstate commerce in the purchase or le of cigars or cigarettes or other to- acco products, or for any other purpose, lawfully did or at all entered into any greement or understanding or conspir- y with the respondents therein named, with any of them, or with or through ieir respective corporate organizations any thereof, or co-operated with said espondents or any of them, to fix uni- orm or any discounts or prices at which gars, or cigarettes or other tobacco oducts handled through the respondent orporations should thereafter be resold. Jenies that it entered into any agree- ient, understanding or conspiracy for ie accomplishment of the purposes al- ged, or any of them, or any purpose, id denies that it did, pursuant to said leged agreement or understanding or onspiracy in the year 1921 or at any me, fix, abide by or adhere to the dis- ounts so alleged to have been fixed or greed upon, or has since such year 1921, ursuant to said alleged agreement or nderstanding or conspiracy, fixed, ided by, or adhered to, discount prices alleged to have been fixed or agreed pon."—LAMM.

'ells About Indiana's Anti-Cigarette Law

LA PORTE, Ind., Aug. 4.—Talks against ie use of tobacco by boys and girls nder 21 years were made at the Chris- an and Friends church Sunday schools st Sunday by H. M. Gard of Knights- wn, Ind., a representative of the No- obacco League of Indiana, Inc.

When questioned as to the work of ie state organization, Mr. Gard said: We are not attempting to take tobacco om men over 21 years, but we do pro- se to inform the public in regard to diana's stringent cigarette law and so enforce it."

He mentioned that Henry, Randolph, elaware and Franklin counties are en- rcing the law against the sale of cig- ettes to minors and that the officials Goshen, Elkhart, Mishawaka and outh Bend are planning a campaign for nforcement of the law.

Mr. Gard declared that cigarettes have een placed on sidewalks in Indiana wns to induce children to use them.

He quoted the following Indiana laws his addresses:

"It shall be unlawful for any corpora- on, company, firm or person to sell, arter, furnish, procure, or give away, rectly or indirectly, to any minor any garette, cigarette wrapper, or any sub- itute for either, of to persuade, advise, unsel or compel any minor to smoke any cigarette. Any such corporation, company, firm or person violating any of the provisions of this section shall for the first offense, on conviction, be fined not less than $10 nor more than $50; and for the second offense, such corporation, company, firm or person shall, upon conviction, be fined not less than $10 nor more than $50, to which may be added imprisonment in the county jail or workhouse for any period not exceeding 30 days."

"That it shall be unlawful for any person under the full age of 21 years to misrepresent his or her age and state that he or she is over the age of 21 years in order to purchase, procure, use, sell or otherwise dispose of any cigarette, or other article mentioned in section one of this act."

Waxes Eloquent on Benefits of Co-operation

The world's history is but a succession of chapters of the same import on the question of the laborer. Black as night through long ages has been the gloomy lot of the companion of the ox. Citizenship with a voice in the government did not come within the view of those in high places for the worker.

Sad, sad, indeed, was the condition of the builder, the artisan, the mechanic and the man who followed the plow. No slave was meaner nor lower, and thus passed the centuries when the doctrines of the divine right of kings was supreme.

Yet, through all those passed years, burned the fires of hope in the minds of those peons of labor that the day would come when those same slaves could raise their heads and turn their faces to the sun of the new-born day when their voices could and would be heard and listened to.

It had almost passed into an axiom that no farmer movement could succeed, because the farmers would not stick together. But that statement has ceased to be axiomatic, for our farmers have at last woke up and by collective marketing now dispose of several of their products at prices that make the farm a profitable source of revenue.

No longer are these crops dumped upon the market by our farmers in a wild scramble to let go the fruits of their year's work at whatever price the shrewd speculators cared to pay him. And once out of the hands of the farmer then soared prices of farm products.

But changes are taking place on the farm today, all the result of co-operative effort. Only from a few farmers does the manufacturer get any tobacco as soon as ready for the market. The pool takes the great bulk of this farm product and holds it until such time as the manufacturer pays such price as the pool asks.

For the past two seasons this has occurred in the burley tobacco belt, and none can gainsay that the pooler has made the price. Even the non-pooler, who in a measure has been benefitted, will admit this fact.

And the tobacco tenant on the farm, how his lot has been improved none can gainsay. Thus at one stroke the pool has benefitted both the landlord and his fellow-laborer—the tenant—as well. It is a very modern miracle.

Now that our tobacco growers have this in hand will they not continue in a movement that has wrought them so much good?

It is said that there is fear of an overproduction this year. If that be true, this fact would make stronger the necessity for sticking together in closer union than ever and strengthening themselves by getting within the pool every grower possible.

The pool must be preserved. It must succeed, and it shall succeed if our happiness and our prosperity are to endure. —*Shelby (Ky.) Sentinel.*

Wisconsin Market Has a Vigorous Buying Spurt

Northern Section Scene of "Feverish" Rush—Movement Shows Signs of Slowing Down—Dry Weather a Disconcerting Feature—A "Hot Time" During Winter Seems Probable.

EDGERTON, Wis., Aug. 19.—Buying ade a vigorous spurt in the northern gions the past week. Sweeney for ndrich Co.; Jenson for Spitzner; Wile Sons for Bayuk Cigars, Inc. Mc-tosh, Bekkedal and others searched antically for the few decent crops. The ovement seems to be dying now, but rhaps no growers of good tobacco have t had the chance to refuse or accept to 32 cents a pound for their tobacco. is a funny thing, there are practically crops of binders worth the name as t.

"Bone Dry"

The weather is as dry as a bone. Many the sandy loam localities have not had rain since early June. After a splen-d start, the northern regions are pro-icing one of the dryest-year crops in story. Corn fields fully matured, but ly knee high, and of very sparse owth, and seared grass greet the eye every hand.

Vernon county is producing perhaps e dryest-year crop in its recent history. onroe, Jackson and Buffalo counties e as bad. Crawford and Trempealeau unties had a little longer moist spell in e spring, but even there every "ridge" op's chances of being binders are prac-ally nil, and the valley crops that can ome through" without rain are very, ry few.

Binder Crops Being Bargained For

The few valley crops that are promis-g to be binders are being bargained for prices ranging up to 32 cents. It is rd to conceive, but it is so. There is so another undeniable fact—a large nount of stemming has been bought in e early buying at prices around 25c. here are chances for trouble in this di-ction. However, one firm is said to ve an 18-inch clause in its contracts, d another different clauses as to differ-t possible finishes to the crop with ifferent prices for it. Perhaps the total 23 sold will equal 3,500 acres.

Prospects Point to "Warm" Period

The independents are again setting the ice on the crop, and prices are so high at the pooled growers are in an up-ar again. The prices paid will be al-ost impossible for the pool to equal. ne firm boasts of over 400 acres of ooled tobacco being falsely sold to them, ut finding out they were pooled after ey said they were not. Another hectic inter is promised. All the "grief" is ot perhaps going to be undergone by the ool. If the dry, short tobacco growers re "docked," many independents will in the pool.

Conjecture as to Neprud's Future

The entire directorate of the pool was e-elected with the exception of Helmar eprud. It is conjectured whether, or o, he will lose his official job as pub-city director. The nays apparently ave it. The pool will be through assort-ng in a couple of weeks.

Some Good Crops in Southern Section

In the south, the tobacco is coming along fine with plenty of moisture in many sections. On a ten-mile drive in a banner Southern section, 21 poor crops, 24 fair crops, and six excellent ones were seen by the writer. The writer has seen only two Northern good crops after over a hundred miles in the dry Northern belt.

Many cases of '22 binders have been marked up mentally by the owners recently.

Stewart McGriffin has resigned as Wisconsin head of the American Cigar Co. He is to go in business with Harper, of Tomah.—BADGER.

Cigar Slogan Pleases Box Manufacturers

E. A. Wampole of American Makers Corporation, manufacturers of cigar boxes, etc., at Perkasie, Pa., writes to TOBACCO, as follows:

"We have read with exceedingly great interest an article in your journal on the new Cigar Slogan, 'After all nothing satisfies like a good cigar.' We heartily congratulate the T. M. A. for selecting such a pleasing and spicy slogan, and feel confident if properly advertised, the cigar industry will derive very beneficial and lasting results."

Northern Wisconsin Pool in First Annual Meeting

MADISON, Wis., Aug. 18.—Resolutions asking for a more perfect system of grading tobacco, a re-districting to prevent a variation of more than 200 growers in any district, and election of a new board of directors, was the chief business transacted at the meeting of the Northern Wisconsin Co-operative Tobacco pool representatives this week.

The directors elected are Gust Davidson, Westby; Lars Lien, Edgerton; A. C. Johnson, Soldiers Grove; John Danielson, Colfax; John Dahle, Deerfield; John Ellickson, Cambridge; Martin Emilson, Chaseberg; Haaken Haakenson, Eleva; A. W. Hanke, Cashton; D. A. McCarthy, Edgerton; Theodore Ordold, Chippewa Falls; C. B. Shoemaker, Janesville; R. S. Steemke, Morrisonville; John Thompson, Windsor; C. P. Thompe, Whitehall, and L. L. Tompson, Viroqua.

The 96 delegates who attended decided not to tie the hands of the directors in any manner and left with them the development of the activities of the pool, without recommendation other than the resolutions passed.

At a meeting of the new board of directors the following officers were re-elected: Jens Davidson, president; Lars Lein, vice-president; A. C. Johnson, secretary-treasurer.

Edward Nordman, commissioner of markets, addressed the delegates. In part, he said:

"The success of the tobacco pool shows what the farmers can accomplish when they organize and co-operate in the marketing of their products.

"The pool has enabled farmers to meet buyers on an equal footing and to market their tobacco in an orderly manner, saving the waste and unnecessary expense connected with haphazard selling.

"The achievement of the pool proves that organization and co-operation are invaluable factors in improving conditions in agriculture."

Threaten a Burley Crop Cut Out in 1924

(*Special Telegram to* TOBACCO)

LEXINGTON, Ky., Aug. 21.—A cut out of the 1924 Burley tobacco crop was urged in a resolution adopted by six hundred Bourbon County growers, at Paris, Ky., with one dissenting vote.

Growers of Fayette County will consider the same proposition at a meeting called for next Saturday.

Considerable sentiment in favor of cut out of next year's crop reported from a dozen counties in central Kentucky, which are large producers.—J. SHERMAN PORTER.

Don't Want to Discredit the Pool System

PARIS, Ky., Aug. 18.—More than 600 Bourbon County farmers, attending a meeting in the Court House this afternoon, favored cutting out next year's crop. One man voted "no." The meeting was called to order by Claude M. Thomas and James M. McClure was elected permanent chairman and secretary.

"You are here," said Mr. McClure, "to agree on some orderly and decent plan to continue the good conditions which exist. It must be done in a proper spirit. We are not here to coerce any man, nor to bring discredit upon the Burley Tobacco Marketing Co-operative Association. Its officers should not be brought into this discussion. We were told a year ago to be careful as to the amount of tobacco we raised this year. I do not believe we have taken that advice as we should have done."

Senator H. S. Caywood said that the tobacco pool was a splendid idea and that everyone should stand behind it. Action should be taken at once so as to enable landlords and tenants not to make contracts for next year, he said.

The chairman was empowered to appoint a committee to formulate plans for working the cut out in Bourbon County.

Ocean Cigar Stands Popular

Faber, Coe & Gregg, Inc., cigar importers and distributors, of 36 West 37th street, are to remove to larger and more commodious premises, at 206 West 40th street, shortly after Labor Day, in order to cope with the rapid expansion of their business. It is interesting to note that the cigar store and stands on the big steamer *Leviathan*, which are controlled by this organiaztion, are being well patronized, and that transatlantic passengers are highly pleased with the innovation.

Co-op Holds Spot Light in North Carolina

(*Special Telegram to* TOBACCO)

WILSON, N. C., Aug. 21.—The Co-op. Association opened its eastern Carolina warehouses today. Not a pound of tobacco was received at Wilson, Goldsboro or Tarboro—no receipts reported up to noon. Very small receipts reported at other stations.

The town of Greenville, in Pitt County, is overrun with people today, on account of the cases to be tried there. G. H. Pittman is suing the Association seeking the cancellation of a co-operative marketing contract, which he alleged was secured fraudulently. Attorneys for the Association made plea to have case moved to another jurisdiction, claiming that a fair trial could not be had in Pitt County. The motion was denied by Judge Horton. At six o'clock the jury had been selected.

Pitt County is the largest tobacco producing county in the state. A month ago when the one hundred and eight suits were started against the Association, Mr. Wilson, secretary of the Association, gave out a statement to the newspapers, saying that there were only a few recalcitrant members; that Pitt County was loyal. Attorneys for the Association evidently do not agree with their secretary. The verdict of the jury is likely to have far-reaching results.

Judge Horton is recognized as one of the ablest jurists in the state, and his decision will be awaited with the keenest interest. Everything in his court moves with a snap, but on account of the multitude of witnesses, and the big array of counsel, the case will probably continue for several days before getting to the jury.—MCFARLAND.

Pleads for Co-operation

SHELBYVILLE, Ky., Aug. 18.—J. Sherman Porter, of Lexington, editor of the *Burley Tobacco Grower*, was the principal speaker at a big meeting of farmers and tobacco growers here today. Mr. Porter said that only two questions were involved in the fight between co-operative marketing and the old auction system.

"The first question you must decide," said the speaker, "is whether you desire all the profit from your work in the tobacco fields, or whether you desire to divide that profit with pinhookers, speculators, and loose leaf warehousemen. The second question is whether you desire to put yourself in a position to have something to say as to the price you are to receive for your tobacco.

"If you do want all the profits from your work, come into the Burley co-operative and you will get them. If you do not, stay out, and you most certainly will continue to divide with others.

"If you want to have a say as to the price you are to receive the only way in the world you can get that say is to come into the Burley co-operative and stand with the 88,000 other members of that association for the price you want. If you do not come into the association it is certain that the price the buyer fixes will be the price you get, for acting individually you are as helpless now as you were when tobacco was bringing

the prices you got for the 1920 crop and even less.

"For two years you have shown the world that you could collect your price for your product. You will do that for four more years under your present contract. Join your neighbors in this movement, which is not only a movement for better present prices for tobacco, but a movement for a permanent prosperity wherever Burley tobacco happens to be the chief cash crop."

When You Reject Goods, Reject Them

There is nothing truer, both in law and common sense, than that the only way to do a thing is to do it. Wasn't it Horace Greeley who said that the way to resume specie payments was to resume?

And so the one and only way to reject goods which when they arrive prove to be not what you ordered, is to reject them. Don't play with the situation or with your rejection—reject the goods wholly, completely and without any string. Otherwise you may find your rejection no rejection at all and be compelled to take goods and pay for them.

At the present moment a buyer of goods amounting to over $50,000 is meditating in sorrow over the truth above set down. He bought goods which weren't what he ordered, rejected them and demanded his money back—he had paid for them on sight draft before inspection—and ordinarily he would have gotten it back, but in order to strengthen his case on the rejection he had some of the goods used. The court said that having rejected the goods he had no right to do any acts of ownership over them at all. Having done acts of ownership, his rejection went for naught, the goods were his and he couldn't get his money back.

Think of that—$50,000, or a large part of it thrown away merely because of one act of indiscretion. To save others from the same experience I am writing this article.

It is fundamental of course that the buyer who buys one kind of goods and gets another kind doesn't have to keep them. Or if he does keep them he is entitled to some rebate if they are poorer than what he bought. But he must fish or cut bait. He can't play fast and loose, he can't carry water on both shoulders. He can't reject and accept at the same time. If he rejects he mustn't do anything with the goods which is inconsistent with his position that they belong to the seller. If he does do anything inconsistent with his position that the goods belong to the seller, he will be held to have accepted and is then limited to his right to get back the difference between the contract and the value of the goods sent him.

This case I have referred to was particularly unfortunate for the buyer. He ordered this big block of goods on the seller's representations that they were such and such quality, and he paid a sight draft for them before he saw them. Upon inspection, he saw that they were quite inferior to the seller's representations, and he notified the seller at once of this and of his rejection of them. The seller did nothing. Having been paid in full he could afford to do nothing. Further demands by the buyer also elicited no satisfactory response.

Now at this juncture the buyer should have finally advised the seller that he was holding the goods merely as security for the repayment of his money and then begun suit for his $50,000. If he could have proven that the goods were in fact inferior he would have gotten his money back with interest.

His fatal mistake was in believing that he could try out some of the goods while waiting for his case to be reached. He sent one lot of them to one expert and another lot to another. Then when the case came up for trial the seller defended on the ground that the buyer, by exercising acts of ownership over the goods had waived his rejection. The court upheld him and so did the Appeal Court.

This is from the decision:

"The plaintiffs having rejected the goods as early as May 1, and repeatedly thereafter, subsequently assumed to perform certain acts respecting the goods which the defendant claims amounted to acts of ownership and constituted as matter of law an acceptance of the goods.

"The act is explicit and unqualified in its statement that if the buyer, after he discovers defects in the goods, does any act inconsistent with the ownership of the seller, he is to be deemed to have accepted the goods.

"And under the common law, if the buyer accepted the goods after he had examined them, or had an opportunity to examine them, he thereby estopped himself from rescinding the contract of sale.

"The exercise of acts of ownership over the goods is a manifestation of acceptance of them as is any use of the goods by the buyer in a manner proper only on the assumption that the buyer is owner. To make alterations in the goods is an exercise of dominion ordinarily inconsistent with anything but ownership. It has repeatedly been held that altering the nature of property, making changes in it, and especially subjecting it to processes of manufacture, are, without regard to the private intent which accompany them, unmistakable acts of ownership.

"If a buyer does an act which is inconsistent with the seller's continued ownership, the law assumes ownership to be in the buyer.

"In the instant case the defendant insists that plaintiffs exercised an act of ownership under the doctrine above referred to, and that they must be held as a matter of law to be estopped from thereafter asserting that they did not accept the goods, and thereby estop themselves from rescinding the contract. But the plaintiffs urge that in subjecting these goods to use, they were within their rights, and that their act was not inconsistent with the seller's continued ownership of the goods, inasmuch as a buyer is entitled to take some portion of the goods and subject them to a test, even though the test involves a destruction of some of them—in cases where a test is necessary to determine whether the goods conform to the contract.

"It is no doubt true that a buyer has a right to make a test, if it is necessary that the test should be made. But, if the nature of the goods can be determined by inspection alone, test is not necessary.

"But the rule that the plaintiffs had, as buyers, a right to test the goods is inapplicable to the facts. The purpose of a test is to enable the buyers to determine whether to accept or reject the goods. The right to make the test is to be availed of, therefore, while the question as to the rejection of the goods is open, and not after it has been determined. In this case the goods had been absolutely rejected by the buyers in the most positive terms over and over again before the plaintiffs ordered some of the goods tested."—*Copyright, August, 1923, by Elton J. Buckley.*

Praises Connecticut Crop

Howard Cullman and Harry Rothschild, of Cullman Bros., Inc., have returned from a visit to their Connecticut plantations. Both Mr. Cullman and Mr. Rothschild express their enthusiasm over the wonderful crop, and endorse the opinion of Joseph Cullman, Sr., recorded in the August 2 issue of TOBACCO, regarding its remarkable quality and progress.

Western Outlook Brightens

Mark Levine, of H. Duys & Co., Inc., is covering the Western States. Mr. Levine notices a decided improvement in business conditions throughout his territory.

Home from Europe

Mr. and Mrs. Percival R. Lowe arrived in New York last Friday on the Cunard line *Aquitania*, after spending an enjoyable two months' holiday abroad.

Keystone State Business Brisk

Herbert J. Curtis, of Arthur Bornholdt & Co., 139 Front street, is in Pennsylvania this week, booking many orders for Sumatra and Java wrappers.

How to Awaken a Sleeping Industry

Experiences of General Cigar Co. with Advertising Based on Intervie by James True with Fred Hirschhorn, President of General Cigar Co.

In *Printer's Ink*

Many an office wall bears a legend to the effect that only a very live fish can make steady upstream headway. This obvious truth evidently has been repeated innumerable times to spur individual effort, but it applies as well to entire organizations, to methods and practices and particularly to a merchandising policy that can drive a business ahead at a remarkable rate in a lagging industry that has made no headway against opposing conditions during the last decade.

While such a policy as outlined here is applied to a cigar business, its elements have been proved to be vital and fundamental, hence they should be even more effective when applied to lines of business in industries that encourage lively selling effort because of their progress.

During the recent convention of the Tobacco Merchants' Association, held in Washington, much time was devoted to discussions of the conditions of the cigar industry in its relation to other industries in the tobacco manufacturing field. The fact was brought out that the cigars manufactured in the country last year totaled about eight billion, showing no increase over the volume reached more than ten years ago, while the production of pipe tobaccos has grown to a satisfactory extent, and the volume of cigarettes has increased enormously.

One of the many interested attendants was Fred Hirschhorn, president of the General Cigar Co., and he seemed anxious to suggest constructive ideas for stimulating the consumption of cigars; but the condition of the industry is entirely foreign to his own experience. Last year, the business of the General Cigar Co. showed a profitable growth, increasing the progress of previous years, and for the first four months of this year the increase is 41 per cent over the volume for the same months in 1922.

Five hundred and seventy-four million cigars was the total production of last year, and the General factories are now producing them at the rate of 14,000,000 a week. In Class B cigars, which retail from five to eight cents, this company now manufactures 23.7 per cent of the country's production.

Looking at the Industry with the Company's President

After one of the convention meetings at the New Willard Hotel, Mr. Hirschhorn mentioned some of the peculiar conditions and vicissitudes of the cigar industry, and discussed the salient features of the policy that is responsible for the success of this company.

"There is nothing," he said, "that will ever take the place of good cigars. Many cigarette smokers find them enjoyable as a contrast, and I am sure that a proper organization of the industry and the general use of modern merchandising methods will produce a healthy growth. Our company has noted many indications that our success is due largely to the fact that we have created business by encouraging the smoking of cigars, and there is no reason that I can see why a similar general merchandising policy would not be productive for the entire industry.

"Our progress has been rapid and genuine because I'm sure our policy was first formulated on sound principles, and because we have adhered to it consistently. The policy is simple—it has only three predominant elements, and each one considers as of equal importance the interests of ourselves, of the jobbers, the retailers and the consumers.

"The first element deals with the necessity of producing outstanding values. Instantly you will see how that bears on all of the factors of our distribution. It is the subject discussed more than any other in our offices. Every member of our organization is concerned with making our goods as attractive as possible both in quality, appearance and conc

"We are convinced that unless yo offer outstanding values you have or nothing to advertise in a prof way. And our consideration of adv ing is second in importance as ar ment of our policy.

"Strangely, you will hear discu as to whether or not the consumer for advertising. Now, I do not the facts as to this in other lin business; but I do know that you c make the consumer pay for adver in the cigar business, and I do no lieve that such a thing can be done p ably in any line. You cannot mak consumer buy a cigar in profitable tities merely because it is adver You cannot bolster up with adver the sale of a cigar that is weak in It has been tried a number of tim the industry, and it has invariably f

"Our own experience well illus the answer to the problem. We hav reputation of spending a great de money for advertising, and if I state appropriation in dollars it would large; but it is comparatively sm

"This expenditure we look upon investment. Figure it out as you as an expense it is too negligible t fect the retail price in the slightes serves to make our values widely kn which is invaluable, and it adds no to the prices the consumer pays.

"Advertising has not only mate assisted us in building up a large vo of business, but it serves to mai the volume. It has not only establ our values in the minds of many mer it serves as a reminder and prevents sumers from forgetting our goods we attempted to save our appropri and stopped advertising for a year sale of our goods would undoub drop off to some extent. And a re tion of even 15 per cent in our vo would necessitate increasing our p to a point that would increase the r prices of our goods. So I'm sai saying that the consumer buys our g at lower prices than would be pos if we did not advertise them."

The Cumulative Value of Advert

The cumulative effect of the adv ing was also discussed during the i view, and Mr. Hirschhorn declared the consistency of the company in it vertising had been of greatest value. said that the General Cigar Co. ha ways believed in sticking to its plans policies.

"We began advertising so long a he continued, "that I've forgotten year. Our first appropriation was sr but it has grown steadily every year the business, and we have always s it as planned, regardless of temporary verse conditions. The advisability curtailing expenses never has cause to reduce or suspend our adverti neither have periods of excessive de when we could not produce enough gars to fill all orders. It is largely cumulative effect of advertising builds good-will, and that is a matte continuity and consistency, of steady less building; not a matter of seas effort.

"The third element of our policy, distribution, is the result of develop and growth in our determination to the retailer the quickest turnover sible and deliver our cigars in pe condition into the hands of the consu

"About 65 per cent of our produc is distributed through our own job houses, which are operated under name. The balance is sold through independent jobbers, who control competitive territories. All whole stocks are located at points most venient for distribution, and we cover entire country on a freight-paid basi the retailer, giving him the same pric our goods, no matter where he hap to be located.

Four years ago, we inaugurated the tem of delivery by salesmen. We fur- hed a number of our men with cars ipped with specially designed bodies carry 20,000 cigars each. The sales- n sells what the dealer requires, kes delivery at once from his stock l attends to the collections.

Most of our salesmen are now work- in this way. They see their cus- ners frequently, they replenish their omobile stocks almost daily from our bers, and they have demonstrated be- nd question that the system for us is most economical and convenient yet ised.

This system of selling would be im- sible if we manufactured a very large e; it is facilitated because we make five brands and very few sizes. The bert Burns, full Havana filled with imported Sumatra wrapper, in three es, and Van Dyck with all-Havana er and a Connecticut shade-grown apper, are made in five sizes to sell ten cents, two for a quarter and fif- n cents. White Owl, a large cigar h all domestic filler and Sumatra apper, retails for eight cents, two for een, and is now selling at the rate of ,000,000 a year. Bobbies are fairly ge with all domestic filler and Su- tra wrapper and are made in one size sell for eight cents, two for fifteen. illiam Penn is a small domestic cigar h an imported Sumatra wrapper, ich retails for five cents . Thus, we ve five brands with only eleven sizes.

Of course, in selling our volume with se few items, there are many things t should be considered besides the es I've outlined. The best merchan- ing policy ever devised would not be ccessful unless it were demonstrated the right kind of an organization.

Every salesman, every foreman and ecutive we employ occupies his posi- n because he made good in a less im- tant position. Our men are all gradu- s from a lower rank, and they're all ly justified in anticipating promotion they make good where they are. We er go outside of our organization for n to fill responsible positions, hence have an exceptionally enthusiastic, al organization which expresses our icy in all of its activities.

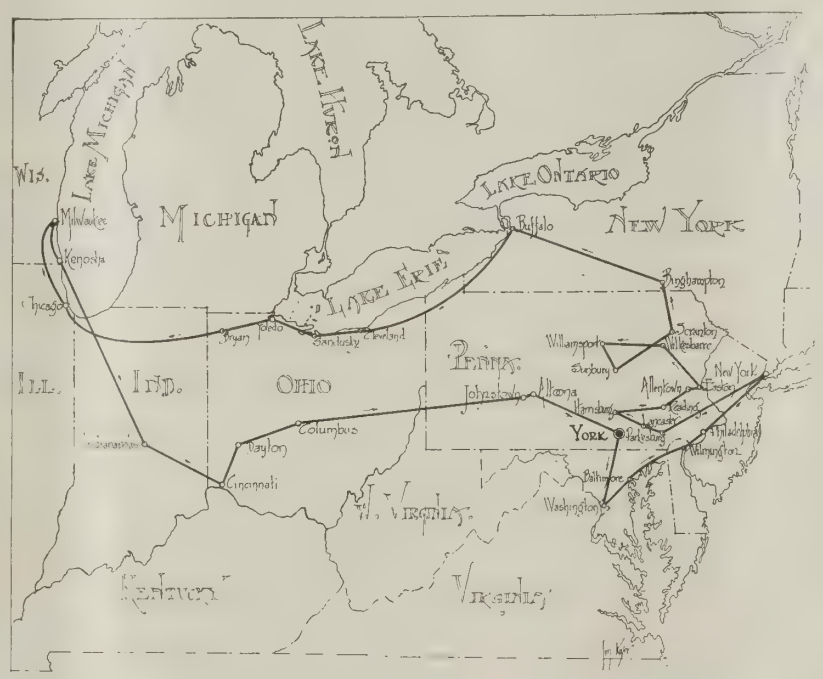
ow the Company's Model Retail Stores Help

Another great aid to us has been our ailing of cigars. Our eighty stores models of their kind, and, while they profitable, they are not conducted profit. We established them to learn first hand just what our retailers were against, and to determine the prefer- es of the public. The stores have en- ed us to furnish our salesmen with aluable suggestions as to retail econo- s and selling methods, suggestions ich enable them to talk intelligently retailers about every phase of their siness.

Our business is conducted on a low ss percentage of profit to increase ues and, by accelerating turnover, es us a more satisfactory return on investment. For the same purpose, ask our jobbers and retailers to take rofit on our goods that is slightly less n the average, and they find that the ults are just as satisfactory to them- ves as to us.

However, the organization, the stores many other things, are only the tools h which we are working out our icy, which is the most important of Given the right kind of an organiza- n, I am convinced that our experience ves that the policy I have outlined, policy of outstanding values, intelli- nt sales effort and advertising, and a venient service, with equal considera- n for all concerned in the distribution the goods is fundamentally sound and only policy that will enable a business overcome the handicaps of indifferent rkets."

Off to the Westward



. Golovine, of 173 West Broadway, w York, whose cigar factory is in st Tampa, Fla., is off on a swing und the business circle, which is to lude Buffalo, Cleveland, Detroit and er points farther west, calling on his le. He is expected to return some- e in September.

Great Enterprise of the Manchester Cigar Co.

York, Pa., Aug. 18.—Lieutenant Karl S. Ort and Ray N. Paris, of the Manchester Cigar Co., this city, have returned from an advertising campaign covering eight weeks in which the merits of the Havana Cadet, the famous 5-cent smoke of the Manchester Co., were set forth in cities and towns of eight States and the District of Columbia. In the campaign, the company's airplane was utilized, with Lieutenant Ort as pilot, this being the first time a tour of this extent was attempted to advertise a 5-cent cigar, or, indeed, any priced cigar. The farthest point west reached in the campaign was Milwaukee, Wis. Lieutenant Ort and Sales Manager Paris were accompanied as far as Cleveland, O., by J. F. Reichard, proprietor of the Manchester Cigar Co.

The "Hop Off"

The trio left York about the middle of June, opening the campaign in Lancaster, Pa. From Lancaster, they proceeded to Reading, Easton, Wilkes-Barre, Williamsport, Sunbury and Scranton, all in Pennsylvania. Binghamton and Buffalo, in New York, followed, after which came Cleveland and Toledo, in Ohio. Then

they proceeded to Chicago, Ill., and Milwaukee. Facing east again, they went to Indianapolis, Ind., to Cincinnati and Dayton, O., to Pittsburgh and Johnstown, Pa. From one to 10 days' time was spent in each place. The campaign covered eight weeks. Air flights were made four weeks in succession without losing a day because of bad weather. A total of 10,000 miles was covered in 150 hours' flying time at an average speed of 65 miles an hour, without any loss of time by trouble with the airplane, which functioned perfectly throughout the entire trip.

On many of the trips, Lieutenant Ort was accompanied by Sales Manager Paris, except on long "hops," when it was necessary to carry 60 or 65 gallons of gas, which alone weighs approximately 400 pounds. Sales Manager Paris reports excellent results from the company's novel advertising methods, particularly in the smaller cities and communities.

Some Difficult Flying Sections Encountered

Lieutenant Ort states that some very difficult flying country was encountered in the mountain regions of Pennsylvania, but after leaving Buffalo and until reaching Steubenville, O., there were plenty of landing fields available along the route.

The bombing from the airplane has proved very successful in attracting public attention, and is followed by a shower of handbills, carrying illustrations of the Havana Cadets and container, the name of the manufacturer and the local jobber.

An Unexpected Event

The Manchester Cigar Co. received some publicity it had not figured on at Binghamton, when one of the bombs failed to explode until it struck the plaza of the courthouse. Thus what would have otherwise gone unnoticed in the daily press was played up under an eight-column headline. Immediately upon the landing of the airplane, the pilot was accosted by an individual distinguished from other citizens by his brass buttons and badge. He rode a motorcycle, and said he had come from city hall to invite the pilot to call there. The invitation was accepted by Lieutenant Ort and Sales Manager Paris, but when the pair reached there the magistrate frankly informed them that he had been unable to locate any statute providing a penalty for their "extraordinary" offence. He agreed to compromise by levying a fine of 100 Havana Cadets, which was promptly produced and the smokes distributed among the members of the police force.

Storm Hits Plane

At Dayton, O., where there are dozens of airplanes in the air every day, the aerial bombing of the Havana Cadet plane attracted considerable attention, and was commented upon by the press of the city. From Dayton east, the tour was uneventful until reaching Johnstown, where the airplane, while resting on the ground, was bowled over by one of the severe electrical storms which swept that section on August 8. The airplane was incapacitated for further flying until repairs could be made.

New Machine Added

So well satisfied with the results from the airplane advertising campaign were the officials of the Manchester Cigar Co. that within 48 hours after receiving the news of the accident at Johnstown, they had delivered to them in York a new plane to replace the damaged one. The original plane will be repaired with the idea in mind of sending the two planes through the South this fall.

After conducting advertising campaigns with the airplane in Johnstown and Altoona, the Manchester Cigar Co. representatives will work in Atlantic City and other coast resorts until September 10 before proceeding to the South.

Advertises Two-Dollar Bill as a Calling Card

To win a place on the counter tops of its dealers for Blue Boar cigarettes, the American Tobacco Company is advertising a two-dollar bill as the calling card of its division managers. In page space in business papers, the company is telling dealers of its plan to give Blue Boar cigarettes prominent display. Wherever a division manager finds a carton of these cigarettes on the counter top he will promptly give the dealer a two-dollar bill. The company proposes to give $150,000 to tobacco retailers in this campagin, the advertising says.—*Printers' Ink.*

The Pacific Representative of Pasbach-Voice, Is Out

Pasbach-Voice Lithographing Co., Inc., of Brooklyn, is sending a notice to the Pacific Coast trade, which reads as follows:

"Please be advised that we have dispensed with the services of Franklyn B. Pollock and that he is no longer associated with us.

"As soon as we decide upon a proper representative for your territory, we will arrange to have him call on you for the purpose of ascertaining your lithographic requirements. Until such time, will you be kind enough to communicate with us direct, it being our purpose to give you the benefit of the very lowest prices and every reasonable service that you may expect.

"You have our assurance that your requirements will be taken care of just the same as though our representative was on the spot; in fact, we would appreciate your telegraphing at our expense, on any inquiries for prices or other matters which may arise.

"We are enclosing herewith specimens of our recent cigar label and band work and if we are favored with your business, we know you will be pleased.

"The courtesy of a reply will be appreciated."

Pasbach-Voice announce that they are about to select a new representative for Pacific Coast territory, and that official announcement will be made shortly.

A Tough Proposition

Charles B. Daley, of Cambridge, Mass., writing to the *Boston Telegram*, says:

"I wish to tell Mr. Caldwell a few things in regards to his anti-tobacco crusade.

"According to all the known laws of nature, when you smoke a cigar you ought to drop dead. But as you have noticed don't.

"Not only do you survive the experience but you derive considerable satisfaction from it. And you can keep on doing it several times a day all your life and yet live to be 80 years old, do your work, raise a family and enjoy first-class health.

"We are told that the crusading moralists will soon forbid smoking.

"The most convincing proof that tobacco is harmless to men is found in the statistics and practice of the life insurance companies.

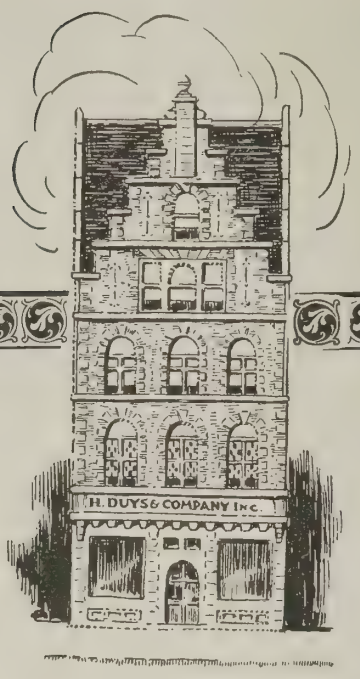
"If tobacco shortened human life the insurance companies would not overlook that fact.

"The fact that the governments engaged in the great war provided their troops with tobacco rations while trying to keep them in perfect physical condition, is also evidence that it does not seriously injure health.

"All countries have their own narcotic and you cannot keep it from them. Tobacco is the most harmless and that is why we use it. History proves that torture, punishment, and prohibition cannot prevent the use of tobacco. In view of the foregoing facts I have mentioned and according to the letters of other readers I think the Antis are up against a 'tough' proposition."

New Norfolk Office

W. O. Smith & Co., freight brokers and forwarding agents of 32 Water street, New York, and various other places, make the following announcement to their friends and patrons:



"Due to the increase of export traffic through Hampton Roads, we have moved our Baltimore branch to Norfolk, Va.

"Our manager, E. P. Howard, is a native of Norfolk and thoroughly conversant with the handling of foreign shipping.

"We wish to express thanks and appreciation for past business and solicit your continued patronage."

The new Norfolk office is in the McKevitt Building.

Other offices and agents of W. O. Smith & Co. are: John S. Connor, Marine Bank Building, Baltimore, Md.; Biddle W. Allen & Co., Whitney Central Building, New Orleans, La.

Orlik Staff Augmented

Alfred Orlik, manufacturer and importer of pipes and smokers' articles, of 80 Fifth Avenue, announces that L. Allen Stultz has joined the sales force and will call on the trade, starting the first week in September.

Expects Good Fall Business

Grosvenor Nicholas & Co., 60 Broad street, cigar importers and distributors, report that the summer resort business is keeping up well, and that a big fall business is confidently anticipated.

Adopting Your Trade-Mark to Export Markets

By Bernard A. Kosicki, Division of Foreign Tariffs

In *Commerce Reports*

Your trade-mark is a salesman. A esman must gain approach before he sell. If he fails in establishing a id of interest between himself and the yer, because of objectionable remarks, pearance, or manner, his failure re- cts on the character of the goods. Your ade-mark sells the integrity of your m, the quality of your goods, and your od will. It must appeal to the purchaser. It must convey a desire to purase. It must recall distinctly agreeable pressions made by previous purchases. oreign markets demand different selling ethods. Is your trade-mark a good lesman abroad?

A trade-mark, to be effective, must be ractive, simple, and distinctive. Beuse of the differences in language and stoms in foreign countries, exporters e often faced with the problem of deding whether the domestic trade-mark ould be retained or a new one adopted ore suitable to the particular area in nich trade is contemplated.

Without a doubt, the intrinsic value a purely American trade-mark is less road than in the United States. In neral, these three factors operate toard diminishing the effectiveness of a mestic trade-mark in foreign markets:

1. The trade-mark may be unpronunceable in the foreign idiom.
2. Its essential meaning and distinveness may depend upon a word comnation which either has no significance undesirable connotation in the foreign nguage.
3. It may contain coloring or illustraons objectionable to certain races.

One instance was noted in the United ates in which foreigners, desiring a rticular brand of cigarette, called for nother by name, owing to the difficulty pronouncing the first trade-mark. If e goods are on display it is easy for the uyer to make his preference known. If ot, he attempts to do so by describing e brand, thereby increasing the opporunities for substitution.

This condition of indistinct recollecon of a trademark, quite prevalent road, often gives rise to a peculiar ethod of unfair competition which is ry difficult to remedy. Distinctive merican products quite universally enoy prestige as such in foreign markets. s a result, such goods are frequently alled for and designated as "American" ther than by the name of the brand.

Trading on National Good Will

Due to this preference for certain prodcts of the United States there have been oted numerous instances to profit by the od will developed without committing tual infringement. In one instance a reign firm placed on the market a rand of baking powder under the mark American Imperial Baking Powder." lthough there was no deception as to rade-marks between this and a well-nown American brand, it was reported at the sales of the latter product sufred because both brands were accepted s of American origin and therefore ually good.

Other instances have been observed in which variations of a well-known trade name have been adopted, conforming especially to the current pronunciation given the original trade-mark by foreign purchasers. To preclude the possibility of unfair competition of this character, it is advisable to register not only the trade-mark as used, but also variations which are approximately similar in appearance and pronunciation to the original. This practice of defensive trade-mark registration has been followed by many exporting concerns with excellent results in heading off attempted infringements or at least minimizing the possibility of their occurrence.

That foreign competitors should aim at passing off their merchandise as American, either by implication or by false indications of origin such as "New York," "Chicago," etc., speaks eloquently for the years of conscientious effort exerted by reputable concerns in developing a strong good will toward American goods. It emphasizes the importance of the retention of characteristic features in trade-marks which stamp the goods as American. It strengthens the objection often expressed against the adoption of trade-marks so closely designed for foreign markets as to conceal the origin of the goods.

Modifications to Meet Varying Conditions

Nevertheless, it is often highly desirable to make a material modification or simplification of a domestic trade-mark in order to impress it firmly upon the minds of foreign purchasers. If the trade-name is combined with an illustration, and offers difficulty in pronunciation, a translation of the word may improve the value of the trade-mark without detracting from its general appearance. If the trade-mark is a proper name, such adaptation is not possible; but owing to the greater security which such a trade-mark enjoys, especially if it represents also the name of the producting firm or individual, there is less possibility of actual infringement.

Without a doubt goods in foreign commerce are most effectively identified through pictorial trade-marks; that is, marks in which the word and the illustration have an identical meaning. Popular examples are such trade-marks as "Star," "Lion," "Eagle," "Carnation," etc. Such trade-marks, however, should be distinguished from those in which the illustration is merely supplemental or added for effect, to catch the attention of the purchaser. There are a great many such trade-marks in use in the United States, in which the illustration is not directly associated with the word mark. In these the illustration and word mark are not interchangeable, and a knowledge of the meaning of the word is necessary in order to make the illustration intelligible.

The value of a good pictorial trade-mark is tremendous, since it is understood by both literate and illiterate. It passes equally well in the markets of Latin America or the Far East. The lan-

Tells of Chances to Increase Business

By FRANK H. WILLIAMS

We always feel in this store," said proprietor of a very successful middle tern tobacco store, "that there are two rs of increasing our trade.

The first way is by selling more goods the individuals who come into our re. That is, by increasing the average ount purchased by each person who en- our establishment.

And the second is by getting more ple to come into the store.

Let me tell you how we put these methods over effectively in getting re business as from the methods we other tobacco store proprietors and nagers may get ideas which they can ily adapt to use in their own stores.

The making of a greater sale, on the rage, to each person who enters the re calls for the exercise of real sales- nship on the part of every member of store staff who stands behind the nter. It makes it necessary for the espeople to constantly suggest to cus- ers that they buy other articles. For tance, when a man comes in and buys nagazine, the salesperson to whom he rs his money must then suggest that buy another magazine or that he buy igar or a package of cigarettes. Just at the salesman suggests the customer chase is, of course, entirely up to the esman and is governed entirely by the y the salesman sizes up the customers l the conditions surrounding the initial e.

'For instance, if a young man comes and buys some sort of sporting pub- ation or an outdoor magazine, then salesman, who is familiar with these blications, will say something like this the customer:

"'Have you ever tried those Golf cigarettes advertised on the back cover of t magazine? That's a dandy ad for cigarettes and they're dandy cigarettes, too.'

'This, in nine cases out of ten, makes customer turn over the magazine and k at the advertisement the salesman spoken about.

'And then, from this opening, it is the iest sort of a thing for the salesman to ke the sale of a package of the cigarettes thus advertised to the customer, o, perhaps, has had no intention of rchasing anything more from us than magazine.

'In other words, by this simple little esmanship stunt we have materially sed the amount of the sale made to t individual customer. We may, even, ve doubled the amount the customer uld, without this selling effort on our t, have bought from us.

'Again, a customer may come in and a single cigar from us. When this the case we size up the customer and whether or not he has any other ars in his pocket and whether he has aspect of being a pretty consistent oker. If he has no other cigars visible l if he seems to be a pretty regular smoker, we say something like this to him:

"'If you'll buy fifty cents worth of these cigars you'll save money.'

"In the majority of cases this sort of a little sales talk always gets a rise out of the customer and he wants to know how much he'll save. Then when we tell him it is quite an easy matter to go ahead and make the sale. Every time we do make a sale under such circumstances we are materially increasing the total amount purchased by that customer and are going far toward achieving our desired goal of increasing the average amount of goods purchased by every person who enters our store.

"In cases where prosperous looking individuals buy one or two cigars at a time we nearly always try to sell them a box of the cigars and in many instances we are successful in doing so.

"In all of our intensive selling along these lines we try hard not to get into the habit of saying, 'Is there anything else?' We find that such 'salesmanship' isn't selling at all because it leaves the entire propositon up to the customers and the most natural thing in the world for customers to say to such a question is 'No.' Instead we always try to get a constructive slant into our selling. We try to get the attention of the customer first by referring to some way he can save money, or by talking about something in which he has evidenced an interest and in this way we get his attention and then hook up with some of the goods we carry in stock and by doing all this sell goods to him.

"Since we have put this intensive selling campaign into effect in our store we are selling half again as much, on the average, to every individual visitor to our store as we formerly sold. Which is pretty good evidence that the stunt is worth while from a business standpoint and which may make other tobacco stores want to do the same thing.

"And now as to the things we do in an effort to get more men to come into our store.

"We rely quite heavily on our window displays in achieving this greatly desired result.

"We figure this way about our show windows: Window display advertising is advertising to prospects right at the point where another step will take them into the store. So if our window displays are attractive enough and interesting enough, they will make men stop and look and after having made them stop and look they will make the men come into our store.

"Consequently we always try to get something into our window displays which will prove of real interest to the men passing our store and which will not only make them stop and look but which will make them enter our store and buy goods.

"In pursuance of this plan we change

w Canadian Sales Tax

he Minister of Finance in his budget ch regarding the collection of a 6 per sales' tax proposed to be assessed he Canadian government made sug- ons which quickly brought strong ests from the Canadian tobacco trade. Dominion Cigar and Tobacco As- ation vigorously opposes the proposed ndments and the *Canadian Cigar and acco Trade Journal* is strongly aug- ting the efforts of the trade to have Finance Minister's proposals modi- In a recent article on this subject journal pointed out some of the usion the new tax proposals would to. It shows that recent amend- ts to the 1923 budget provisions call- for payment of the 6 per cent. sales (when this new tax becomes opera- January 1, 1924), at the time of ortation of raw materials and the ite of the tax to manufacturers when raw materials are shown to have been l in manufacture, with subsequent re- ment of the tax when the manufac- d articles are sold, have developed ng opposition for many business in- sts and associations. The Minister inance on June 26 introduced a notice notion to further amend the provisions the Act rescinding the previous un- dy clause reprinted in part as ows.

Provided that the consumption or s tax specified in this section (six cent.) shall be payable in goods.... orted by a licensed manufacturer or ducer if the goods are to be used in, ought into, or attached to articles to manufactured or produced for sale d which are articles subject to the con- mption or sale tax or on goods import- by a licensed wholesaler or jobber ose sales are to be accounted for under provisions of subsection (7); or on ods sold by a licensed manufacturer or ducer to a licensed wholesaler or job- whose sales are to be accounted for der the provisions of subsection seven this section."

The foregoing amendment had not, at time of writing, come up for dis- ssion of the House in committee, but is expected that it will be passed.

Payment of a tax of 6 per cent. on raw f tobacco when imported would be a st burdensome impost on tobacco and gar manufacturers in view of the neces- ies of the industry for holding leaf cks for long periods before they are ken for use.

The various phases of the question ere outlined in a memorandum to the inister of Finance recently by the Do- inion Cigar and Tobacco Association. ecause the representations made to the inister cover some interesting points lative to the Government's machinery r tax collections from the tobacco in- stry, the letter is reprinted in full low:

"On behalf of the cigar and tobacco anufacturers of the Dominion, we are ain approaching you in connection with e amendments to the sales tax pro- sions insofar as the payment of the % tax on imported raw material is con- rned.

"It is our conviction, based on most apparent facts, that if the cigar and tobacco trade be exempted from the payment of this 6% on raw materials, in our case imported raw leaf tobacco, that it will work to the mutual advantage of Government and trade.

"In the first place all raw leaf entering a licensed cigar or tobacco factory is of necessity a raw material and cannot be used by the manufacturer in any other manner than in the production of finished articles,—tobacco or cigars—which will themselves be subject to the sales tax on finished products. This means that every pound of raw leaf tobacco subjected to the impost of 6% on importation would also be subject to the same rebate when taken for use in the factories. Freeing tobacco of the import impost would relieve Government machinery and double entries for every cent collected thereon will have to be rebated eventually, to the confusion of the various Government departments and hardship to the manufacturer.

"The very fact that tobaccos are regarded—and guarded—by the Government in a manner different from any other commodity lends itself to the simplification of considering and treating this industry in a manner different from others. Tobaccos are at all times under direct Government supervision. They arrive 'in bond' and remain 'in bond' until taken for actual use. Before tobaccos enter any factory they are under Government control and supervision. The manufacturer cannot use his raw material without the sanction of the Government through its Excise Department and officers.

"If, then, tobacco is at all times under the direct control of the Government it should appeal to you that this industry could and should be freed from the necessity of first paying a tax and then collecting the said tax back from the Government. This means not only unnecessary work and cost to the manufacturer, but to the Government as well. We believe it to be your desire to eliminate duplication of effort and to simplify as far as possible the workings of the sales tax. We are convinced that the foregoing facts, when brought to your attention, will result in changes we have asked.

"There is another angle—the manufacturers'—to this question, which cannot afford to be overlooked. That is the financial hardship it imposes on the manufacturer. From time to time, in the past, we have drawn your attention to the hardships under which this industry is working. This provision for the collection of the 6% tax when tobacco is imported adds considerably to the cost of manufacturing and the hardships attendant thereto.

"You are aware that tobacco is not used by the manufacturer as soon as received. Supplies for a year, two years or more must at all times be held. Tobaccos brought into manufacturers' bond on, say, August 1, 1923, would likely remain there until the Fall of 1924 or even 1925 before being taken for use. If your original ruling is carried out it means that for a year and a half or two years it will cost 6% to finance raw materials. This, we submit, was not the purpose or intention of your resolution.

Cleveland Trade Ship "Cruising in Calm Waters"

Dealers Not Complaining About An Overwhelming Rush—Not Dashing Around Looking for An Outlet for Enthusiasm—Everything Going in a Quiet, Solid Sort of Way.

CLEVELAND, Ohio, Aug. 18.—As to business conditions in general, in so far, as they pertain to affairs of the cigar, cigarette and tobacco business, there is not much to report. Dealers are not finding that business is getting a great deal worse. On the other hand it is not getting so much better that dealers can afford to take a week off to enthuse over it. It is the sameness of things, day after day without much variation and change that one must tell about. Cooler weather is setting in. It looks almost like it is due to stay with us for a while, too. It is felt that cooler weather, after a sultry, long hot spell, will boost matters, cigar and cigarettly speaking, to a very desirable degree. Let us hope so. Meanwhile the good ship, *"Cleveland Business,"* continues its untroubled cruise in calm waters.

Al Spellman In Town

Al "Nemo" Spellman, jovial and as fat as ever, "hove" in town early this week. Al was filled with brand new enthusiasm over the way things are breaking for the San Telmo brands in this and every other territory. Joan of Arc, especially, is meeting with high favor through this section of the country.

In Atlantic City

Sam Klein, who operates a very high grade cigar store on Superior Avenue, near the Public Square, is in Atlantic City this week on his vacation, and dropped a line to assure me that he is enjoying himself to the fullest degree.

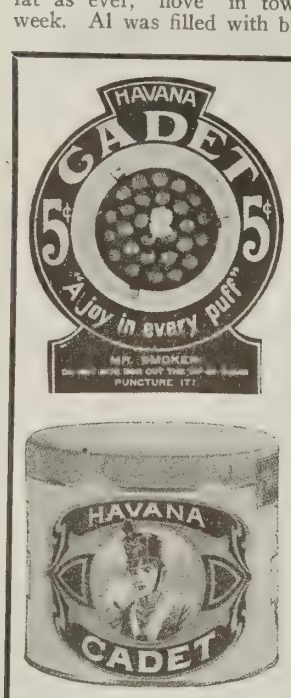
A Visitor

Frank M. Lopez, representing Garcia & Vega was a visitor in Fifth City cigar circles this week. Frank has been having not one least little bit of trouble in selling lots of the Garcia & Vega cigars to all of our local dealers.

Coming from Mott Haven

Louis J. Tropauer, manager of the Mott Haven branch, New York, of the General Cigar Co., is expected in town about Thursday, Aug. 23. The object of Mr. Tropauer's visit will be to see the local correspondent who happens, by the way, to be related to Mr. Tropauer to the extent of a brother-in-law. It is expected that Mr. Tropauer will spend some little time at the Wallace & Schwarz Co., local distributors of the General Cigar Co. line.

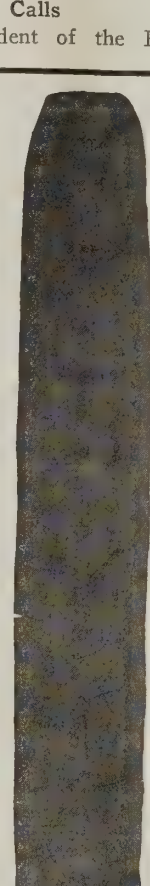
Two Vacationists



I was fortunate enough to get cards this week from both Jimmy Werner, manager of the busy cigar stands at the May Co., and Billy Deal, manager of the cigar departments at the thirty odd Standard Drug Co. stores. Both of these cigarists are having the times of their young lives, and write that it would be hard to get back to work again only for the knowledge that everything is all-right and ready to keep moving at the same fast pace it has always gone.

From Cincinnati

A. M. Richman, vice-president and general manager of the Gray-Richman-Juergens Co., manufacturers of high grade cigars, was a visitor in town this last week end. Mr. Richman came from the Queen City, Cincinnati, and was all prepared to take back with him some large orders for the G.-R.-J. products.



Fields Calls

Art Fields, president of the Fields Cigar Corp., called on his local jot the A. D. Goodman Co. Mr. Fields greatly pleased with the results of s extensive campaigning on his T. R. ci a smoke that seems to be going ever ward in popularity and success.—H

The Schaefer Expansi

DAYTON, O., Aug. 18.—Announcem has been made by officials of the Jos J. Schaefer Co., cigar manufacturers, the purchase of the business of the Davis Sons Co., manufacturers of cig having factories in Columbus and C cinnati. The sale price was not gi The Columbus factory was sold to Mazer Cigar Co. of Detroit.

The Schaefer Co. maintains its m factory on Joe street, Dayton. It a has branch factories in Newark, D ware and Chillicothe, O.

According to officials of the comp purchase of the new business will dou its annual output to between 15,000,(and 20,000,000 cigars more a year. B plants will be operated under the sup vision of the Dayton office.

Allen Davis, a member of the fi which was sold, will continue with Schaefer Co. in the position of sa manager. He will make Dayton headquarters. His chief duties will the development of western territo where the Davis Co. operated chie The company manufactures several po lar brands of cigars.

Officials of the Schaefer Co. say t ultimate plan is to move the Davis business to Dayton. However, this w necessitate the enlargement of its pres factory facilities.

The Schaefer firm was organized years ago by Joseph J. Schaefer, w died in 1910. At the time of his death t business was continued and operated the estate. Its business is conducted u der the supervision of the three so Eugene, Charles and Joseph Schaefer.

It is said purchase of the business the Davis Co. is the first step in t firm's business expansion program.

Testing Tobacco Smoke f Monoxide Poison

WASHINGTON, D. C., Aug. 18.—T much mooted question as to whether t carbon monoxide present in tobac smoke constitutes a hazard to the smok in confined indoor spaces seems to ha been settled as a result of tests just co pleted by the Department of the Interi at the experiment station of the Bure of Mines at Pittsburgh, which demo strated the danger to be negligible.

The tests, which were performed the course of general studies of t Bureau of Mines relative to gas hazar in mines, were made on three men co fined in a closed chamber whose dime sions were 1,000 cubic feet. The thr subjects puffed merrily for the space an hour and a half at cigarettes of eve variety, Turkish, Egyptian, the old Vi ginia brand, and the type wherein t smoker "rolls his own." Following th the smokers drew energetically at an i finite variety of cigars—cheroots, Pitt burgh stogies, black Manilas and Havan of choice degree. Finally they puff frantically at pipes, at pipes of clay a cob, at pipes of meerschaum a briar. At the conclusion of the pe formance the air of the closed chamb had become so smoky that it was impo sible to see across the room. The atmo phere was so irritating to the eyes th it was necessary to wear goggles.

Samples of the atmosphere and bloc samples of the smokers were then take for analysis. It was found that in n instance did the carbon monoxide conte of air exceed 1-100 per cent. The max mum blood saturation was 5 per cen Some of the subjects supposedly inhale their smoke, but the tests indicated th such inhalation, though it may have ex tended to the bronchial tubes, did n penetrate throughout the lungs.

In the Adirondacks

Sam Wasserman, of the B. Wasse man Co., cigar importers and jobber 77 Chambers street, is enjoying a wel earned vacation in the Adirondacks.

Turning Accommodations Into Trade

By LESLIE E. DUNKIN

Most tobacco merchants are accommoating, but many of them complain when ey are asked to accommodate anybody, stead of turning the accommodations o trade as might be done if there is harp eye open to business. Most of merchants, who make a habit of acmodating people, do it quietly and e it understood that it is not customary do it and then it is only to customers, the wise merchant will advertise the ommodations through the newspapers, ng that as a means to increase their of satisfied customers.

t is not necessary for a person to be ustomer of the wise merchant's place business to get accommodations from n, nor is it necessary to make any purise at the time the accommodation is de. If a person should want a check hed or even should want a package, chased at some other store, wrapped send away, all that will be necessary to come to the wise tobacco merchant's re and it will be done as cheerfully though the person were a customer d were purchasing a hundred dollars' rth of merchandise at the time. Of urse, necessary precautions will be takagainst fraudulent checks.

It will soon be seen that business will e care of itself, if the tobacco merant can get the public to come to his ce of business. When any two citizens more want to have a little conference, will be a good advertisement for the bacco store to have them come to it. small room or a small corner, equipped ith ash-trays and cuspidors, will prove be a big asset to the live tobacco merant. A small sign, saying "Do Not oaf Here! Somebody Else May Want his Place!" will solve the problem of e unprofitable loafers.

To assist the thought of the accommoations for the customers, he will advertise in the papers, emphasizing, "Come o The City Cigar Store." The follow.g will be a copy of one of his numerous dvertisements:

When you are downtown
Come To The City Cigar Store.

When you want somewhere to make yourself at home
Come To The City Cigar Store.

When you want a check cashed
Come To The City Cigar Store.

When you want a package wrapped to send away
Come To The City Cigar Store.

When you want a refreshing smoke or chat
Come To The City Cigar Store.

When you want to see your friends or enemies
Come To The City Cigar Store.

When you want to win somebody's friendship
Come To The City Cigar Store.

It doesn't make any difference what you want or if you don't want anything

Come to The City Cigar Store

The tobacco merchant may be bothered with people coming to him for postage stamps. It means a great deal of trouble for him without any profit. Very few of the stamp customers at first will make any other purchases at the time. It also means an amount of money has to be invested in postage from week to week to satisfy this unprofitable demand. He feels, though, that his business will not stand his refusing to sell stamps, so he will set to work to figure how he can turn his stamp-customers into profits and regular trade customers.

"People run out of stamps without thinking about it," the merchant will think to himself, "but they don't run out of envelopes and stationery without thinking about it."

That gives him an idea. He takes two or three boxes of stationery and two or three packages of envelopes, which he can purchase at wholesale prices, and places a two-cent stamp on each envelope. He adds the price of the stamps plus five cents extra for the trouble of placing the stamps on the envelopes, to the price of the stationery and envelopes. An attractive display of these will be made near the stamp drawer with the following catchy statement—"No Stamp Shortage With These." It will not be long before he will notice a marked increase in the volume of his stationery sales and an equally marked decrease in the volume of his unprofitable stamp sales. The stationery sales will bring a profit to the tobacco merchant for his accommodation to the customers.

A tobacco merchant may be troubled with his many friends and would-be friends leaving packages at his store while they do other shopping—to save the trouble of carrying them around. This will create a demand for more space and for more sales help to care for the packages. The merchant can not afford to make an extensive practice of doing this and yet he feels that he cannot afford to refuse to do it. The wise plan will be to take the money, that would be necessary to hire another clerk, and invest it in a large metal "10c Checking Cases," that are found so often in railroad stations. This case will be placed in a prominent place in the store, but nothing will be said about refusing to keep packages free. The dimes will keep dropping into the slots for them, and the public will soon stop asking the merchant to keep their packages for them free,—turning accommodations into profit and trade.

A tobacco merchant may meet the problem of giving free matches to purchasers of cigars to be used when away from the store. The gas lighter at the cigar counter is used for the first cigar or the first light, but the customer always wants a match or two to stick in his pocket. That means a steady drain on the profits of the store, yet the merchant feels that he cannot afford to drop the custom. He will meet the problem by displaying a small card, saying "Penny Box of Matches Free with Each Purchase of Three Cigars." This will solve his match problem and will increase his cigar sales.

A tobacco merchant can solve his check-cashing problem by placing a sign near the cash register, saying "Checks Cashed Free With a Purchase." He will not refuse to cash checks without a purchase, but the positive suggestion presents a better plan for the one desiring to have a check cashed. The telephone connections with all the banks of the city will be a good safe-guard against fraudulent checks.

A tobacco merchant can solve his telephone problem by placing a sign near the telephone on the counter for public use, saying "Line Busy? Have A Smoke While You Wait! Time Will Pass Better For You!"

There are many more accommodations, that the merchant might have for his customers, but with each one there will arise many opportunities for turning it into cash.

Imported Belgian Pipes

Scholtus pipes are to be introduced into this country by B. Van Leer, of 136 Water street, New York, who has been appointed agent for the United States and Canada. The pipes are made of excellent briar-wood and can be retailed at moderate prices. The Scholtus pipe is made in Belgium by the famous house of Scholtus, known extensively in England and the Continent. Mr. Van Leer has a variety of samples on hand, while another shipment is on the way. The Scholtus pipe should prove very popular with discriminating pipe-smokers on this side of the Atlantic.

To Return for Fall "Races"

Samuel Mendelsohn, of Meyer & Mendelsohn, Inc., is spending an enjoyable vacation at Long Lake, N. Y., and expects to return to New York about August 30, in time for the fall "races."

Detroit Manufacturers Preparing Fall Plans

Schedules Give Promise of Conducting Business On Extensiv Scale—Demand for Popular Brands Steadily Increasir —Favorable Report from Various Quarters.

DETROIT, Mich., Aug. 18.—Summer is slipping fast behind us and fall is approaching with rapid stride. July and August business slowed up considerably, although it averaged better than the same period of 1922. Manufacturers are preparing fall schedules, and they give promise of being on an extensive plan. On the well known popular brands the demand is showing a steady increase now While some of the new ones that made their debut on the market this year are standing still or slipping back into oblivion from where they come. Its the old story. "You can fool some of the people some of the time, but you can't fool all of the people all the time." This applies to cigar smokers in particular.

Gaining On Production

The Bernard Schwartz Cigar Corp., with the addition of the new plant on Gratiot Ave. has speeded production on R. G. Dun cigars considerably and relieved the badly oversold condition that has existed on this brand for some time.

Going Full Force

The Webster Cigar Co. is working full force. There was no let-up in production during the summer months, as the demand for this high grade Java wrapped cigar has increased steadily in all territories. Chas. F. Becker, local distributor, has given Webster cigars a wide distribution in Detroit, and the repeating qualities of the cigar have made it one of the strongest sellers in its class in the motor city.

Showing Proper Speed

Cuesta-Rey (Bonded) clean Havana cigars are showing the proper speed in Detroit. Chas. F. Becker is the distributor. This brand is easily the strongest selling clean Havana in Detroit.

Meeting with Deserved Success

"Dick" Tobin, of Herbert Tareyton fame, is in again—in town, I mean. "Yep," Dick is back from a month's work (more or less) up state, and reports conditions very good in the towns visited. In fact, Dick was more than pleased with his business on Herbert Tareyton and Johnnie Walker cigarettes, and all products of Falk Tobacco Co., which he sells. And, by the way, Dick "motored" in. A brand new Ford coupé and he says it runs mighty "slick." Dick will now spend some time in Detroit taking care of the large business his brands enjoy here.

Take On La Primadora

The Central Cigar Stores have added La Primadora cigars, made by Max Schwarz, for exclusive retail distribution in Detroit. This brand is very popular in the East where it enjoys a large sale.

Tom Thurby reports a splendid volume of business on Green Seal cigars in Detroit through his distributors, John T. Woodhouse & Co. This brand is made in several fast selling sizes, and enjoys a wide distribution. Tom is a consistent, hard worker and deserves every success.

Gaylord Marsh, city man for Bert Johnson Cigar Co., tendered his resignation this week, to take effect immediately. His successor has not been named as yet.

Harry Bassett, Michigan representative for Park & Tilford, New York, returned this week from a trip through the state, and reports the Tilford brand going strong in all sections. The Bert Johnson Cigar Co., local distributor, enjoys a fine business on this brand, which is gaining in popularity daily.

"Al" Webb, sales manager for C. F. Becker, prominent Detroit cigar jobber, was host to a few of the "boys" from the office and sales force of his firm at his home on Second Boulevard, Tuesday evening.

Gene Watson, president of Harry W. Watson Cigar Co., is visiting in New York City this week.

The Holton Distributing Co. has discontinued the cigar jobbing business in Detroit.

Sopers Segar Store in the Dime Ba Building, one of the most popular a widely known stands in the city of D troit, occupying the prominent corner Lafayette Boulevard and Griswold S will be forced to vacate Sept. 1, as t Bank people have use for the corner a will not renew the lease.—JIM.

British Tobacco Trade Is Prosperous

BOSTON, Aug. 20.—George J. Whela who returned from England on t *Scythia,* is quoted as saying: "Tobac business in England is in more prospe ous condition than ever before. Manu facturers, jobbers and retailers are n adopting price wars; there is not cu throat competition. Prices fixed in Eng land are fair to manufacturer and cor sumer, and no one factor in the industr is trying to hog it all."

He is optimistic on security prices, an says values have been pounded dow needlessly. He predicts a period of ri ing prices, and said considering asse values, earning power and prospects o some American companies these stock are selling way below English securities

Mr. Whelan attributes this to nervous ness of Americans over the Europea situation. "Germany is broke," he said "she has been bankrupt six months, ye people in this country are still appre hensive over something disastrous. I England the people are nearer the scen of operations, are more vitally intereste and yet their securities are 100 per cen more stable in price."

Mr. Whelan would not deny that merger between the Tobacco Product Corp. and the British-American Tobac co Co. might result. In that event, new company would be formed an $20,000,000 to $25,000,000 cash will b put into the new entity. Stockholders o Tobacco Products would not be calle upon to put up any money. British American interests would provide th cash.

If a consolidation is effected, Tobacc Products common stock would probabl go on a 5 per cent basis.

May Extend Prune Flavorin

RIDGEFIELD, Wash., Aug. 14.—Anothe use, only in its infancy now but which i expected to grow rapidly, on account o its palatableness, has been found fo prunes, and in the future a "chaw o' ter baccer" may consist of Clarke count prunes, according to information receive by Edward L. French of the Ellsworth district, between Vancouver and Cacas director of the state department of agri culture, who some time ago declared tha chewing tobacco manufacturers are con sidering the substitution of prune juic for southern molasses as flavoring mate rial and that Clarke county prunes wil succeed "lasses" in at least one large chewing tobacco factory.

Already a carload of the fruit has beer shipped east to replace the dark brown thick liquid, and between 25 and 30 more will be purchased for the same purpose by one manufacturer this season, it is said. The manufacture innovation may broaden the prune market extensively The prune flavoring quality is said to be superior to molasses.

Buys Fancy Wrappers

Vivian Myers, of the Cortez Cigar Co., of Key West, Fla., was a welcome guest in Manhattan last week. Mr Myers purchased a quantity of fancy wrappers for his company from local dealers.

Assumes Charge

MADISON, Wis., Aug. 18.—Arthur D. Tobias has taken over the cigar and newsstand in the Park Hotel.

ark and Doubtful Days in the Dark District

OPKINSVILLE, Ky., Aug. 20.—The to-co crop throughout the dark district Kentucky and Tennessee is beset by ny troubles just at this time. Heavy ns have drowned out much of it, the weather is causing blackfire to ap-r, the worms are so numerous and acious as to be almost a plague, the vy rains have washed off the gum t gives the tobacco weight, body, and er desirable qualities.

he rains this year have exceeded all vious records. Instead of the months July and August being hot and dry y have been hot and wet. Not only e the rains been unusually numerous they have also been of record-break-in volume, washing land, roads, plants l soil and causing streams to overflow ir banks and inundate the lands ad-ent to them at a more widespread rate n was known at any time last winter. ly two weeks ago, Little River at s point, which is near its headwaters, erflowed and caused untold damage to ndreds of acres of corn and tobacco nted in the bottom lands. Friday ht of last week the stream was on other rampage, out of its banks again low places, but it was thought the e would not be so great as the first ntioned.

Tobacco Badly Damaged

In some cases tobacco and corn were erally washed out of the ground. In ner cases the tobacco was ruined by e water rising about it, or over it en-ely. It is hard to estimate this damage, t it will be thousands of dollars to bacco alone, and corn has probably suf-red equally as much.

But the damage would not be so bad it stopped there. One of the worst ings, and which is causing many farm-s to harvest their crops before it is ally ripe, is the appearance of black-e in the fields. As yet this has been mparatively little, and mostly around ie edges of the fields. But the farmers ave learned by bitter experience in the past what blackfire can do, once it gets started, and how quickly it can do it. So a good many of those whose crops were affected, cut and housed it even though entirely or partially green, rather than run further risk. A warning was issued to the farmers not to act too hastily, and to be sure that they had blackfire in their fields before cutting the crop. They were told that there were many other tobacco diseases which were not contagious and comparatively harmless, yet which were often taken for the blackfire. But most of the growers thought discretion the better part of valor, and doubtless some crops went under the knife that were not actually in danger.

Reports of the blackfire have been worse in some sections than others, while some districts were not touched at all. The damage from it has not been anything like as great as a few years ago when it worked such havoc in the crop.

The washing off of the gum from the leaves, which have attained splendid size under the rapid growth resulting from the copious rains, will cause the tobacco to be light in weight unless the rains hold up and the gum is given a chance to be deposited again. Of course in the case of the crops already cut, this cannot occur. But if the rains stop now the crop in the fields will have opportunity to correct this defect in the two weeks or more before the cutting will be at its height. Especially will this be true if the days are hot and the nights cool, with heavy dews.

Worms Swoop Down on Crops

The tobacco is also plagued by the worms which appeared in droves almost overnight. Every locality is affected. The result has been that the demand for Paris green, arsenate of lead and dust guns has been so large that the dealers have been pushed to accommodate it. The rains have played their part here too for they have served to wash off much of the poison after it had been put on the plants, causing the work to have to be done all over again. The farmers say that nearly all of the worms were big

(*Continued on page* 40)

The Finest

We announce the perfection of an Italian Briar pipe, so fine in its appearance and smoking qualities, that we take great pride in distinguishing it as

Demuth Bruyère

It is the first and only pipe bearing the name of Demuth, representing the realization of an ideal conceived and developed during sixty-two years of pipe craftsmanship.

It will soon be known to the discriminating smokers of the country as "The Finest." The first color page advertisement will appear in Life, issue of November 29. This line is offered to the trade in a range of twelve distinctive styles. To retail at six dollars each.

NEW YORK, THURSDAY, AUGUST 23, 1923

USING SALESMAN AS A COLLECTOR

The Boss was up against a problem that so often presents itself. A staunch and financially able customer was holding up payment of a bill. It was for a fairly good sized amount, and the Boss at that time happened to need some ready funds. Besides, tardy payments had become rather a habit with his good friends Jones and Smith, and though they were important customers of long standing, the practice was getting to be annoying.

But it would not do to send them the ordinary dunning letter, and it would also be bad policy to put the matter in the hands of a collector. After consideration of all the methods that might be called upon to make the collection and keep the customer, the Boss finally decided to send his salesman who looked after the account.

This use of the salesman as a collector turned out to be good business judgment, because the salesman not only collected the amount due without the least friction, but came back with a large order. The same case, if handled by a collector, might have resulted in disaster. As the Boss ran over his reasons for using the salesman in a dual capacity, he concluded that from thenceforth there would be little work for the collector as such.

This is the way he put it to himself: The collector's job is to get the money and, no matter how diplomatic his negotiations may be, his real purpose is bound to show itself in some way or other. With the salesman it is quite different. When he starts out to get paid for an overdue account, his main idea is to hold the customer, and he will shape his effort accordingly.

Besides this fundamental difference in the attitude of the salesman and of the collector that the Boss found, there are benefits that other firms have found worth while enough to have the salesman instead of the collector take care of past due bills. One of these pertains to the matter of overbuying. Stock sheets and automatic ordering systems have been devised for retailers to prevent them from overbuying, but despite these checks there are often cases where the merchant's judgment is influenced by what the salesman has to say.

A retailer with his mind made up to buy a certain quantity of an article will find himself, after a good salesman has departed, with a bill for considerably more than he intended to purchase. It is the salesman's general rule to sell as much as he can regardless of how this may affect his customer.

When the duty of collecting an overdue account is handed to the salesman, he has received an added responsibility. He soon discovers the fallacy of selling a customer too much, and this knowledge makes him proceed more carefully in the future. He has to face the criticism of the customer if what he has urged him to do has proved to be the wrong thing. To the salesman's easy going request for settlement of a bill, the following answer can be imagined:

"I know that bill is overdue, Brown; but the fact is I've got quite a lot of stuff on my shelves that hasn't been selling as quickly as it should. You remember telling me that I would need more goods because conditions were better and there would be more demand. I took your word for it against my better judgment and it hasn't turned out the way you thought. I'm afraid I'll have to ask you to wait awhile on that bill until I'm in a position to spare the money."

This would probably be a soft answer in comparison with what might really be said under the circumstances. The salesman, so one firm has found out, profits by such experiences and is more careful in giving out information that may influence the retailer to purchase more than he should.

An important phase of the salesman-collector's relations with his customers is to be found in the added co-operation that grows up between the buying and the selling house. When the merchant looks upon the salesman as someone whose main object in life is not to beguile him into buying but to help him over the ruts and pitfalls of business, the relationship between the two is on a much higher basis.

When the salesman has collections to look after he gets a far deeper insight into his customer's business than if his sole duty were selling. The collector, as a rule, is furnished with full details of the retailer's condition. He finds out that one class of goods is selling and another is not, and is told of the many problems that the merchant is facing. But the collector may not be of a sympathetic kind. All he may understand is that a bill is due and it is his business to collect it. On the other hand, the salesman can tackle the retailer's problems and suggest means of overcoming them, because they are both in the selling game, and methods in one line may be applied to another. In this way the co-operation of the salesman is far superior to what the collector furnishes, and in the end the selling house benefits.

Along with the advantage of co-operation to the buyer, the seller also has this advantage. The report of a salesman on a past due account would not be made in the stereotyped way of the collector. The salesman would be in a position to state in an expert way just what the condition of the delinquent's stock was. He could, if necessary, arrange to get back his firm's merchandise. In short, he would not be handing in an abstract report, but one bristling with specific details so needed by the man at the desk in the home office.

BELIEVES IN SEGREGATING CROPS

During the fore part of the week, the *Chronicle* talked to one of Bracken's expert tobacco men, one who has been in the game from boyhood, and we might say he is an excellent judge of the weed, and he offered the following suggestion to the officials of the Burley Association: In the past, it has been the custom to commingle the tobaccos of Kentucky, Ohio, West Virginia, Missouri and Tennessee, to be the same, no matter in what state it is grown. The Augusta man's suggestion is that the crops in the different states be graded and kept separate, and when the buyer comes to inspect the pooled tobacco, he will be informed by the Association officials that certain grades of Kentucky, Ohio, Indiana, West Virginia and Tennessee tobaccos are ready for sale, after which the buyer can designate the tobacco he wants to look at. If each state's tobacco is kept separately in the pool and sold separately then there will be no room for any certain section to say that the price on its tobacco was lowered because it was commingled with the weed from another section. If the Association should adopt this plan, each grower would be paid his exact graded price, no more, no less, and to the writer this seems to be the only fair way.—*Augusta (Ky.) Chronicle.*

PAYING BILLS FIRST

If you were to ask a tradesman about now as to how he was getting along on making collections of his bills, he might remark that money was coming in a little slow. Probably some of his customers are letting their bills go over a month or more on the plea that they had their vacation bills to pay.

Such practices create unfortunate results in the community. They mean that merchants must borrow more money than usual, to make up for additional amounts which they must carry on their books.

Some people seem to imagine that a businessman has plenty of money at his command, and if they do not pay their bills promptly, it simply means that he has to draw a little more out of his ample bank account with which to operate his business.

But that is not the way that business is ordinarily conducted. The majority of businessmen depend to some extent on borrowed capital. If payments for merchandise come in slower than usual, the result is commonly that the merchant has to go to a banker and tell him the situation and ask for a loan. He has to pay interest on this additional accommodation, and the charge for this interest is one expense that has to be added for the price of goods.

Every debt should be considered a debt of honor, to be paid promptly. If a man does not want to pay for every purchase at the time, it is legitimate to let the account run until a stated time. But it would greatly reduce the cost of doing business, if people would pay promptly every month. Still more would be gained if people would as a rule pay cash.

People would add to their sense of independence, besides promoting the efficient conduct of business, if they could pay all debts before spending money for pleasure.—*Greeneville (Tenn.) Democrat-Sun.*

FABLE, OR ALLEGORY, OR SOMETHING

A tobacco manufacturer took a ton of tobacco out of a certain bin in his warehouses and had it made into Happy Thought Cigarettes—"They Make You Think."

He took another ton out of the same bin and used it to produce Cleopatra Cigarettes—"A Whiff From Old Egypt."

His department of promotion and publicity having decided the market was ready for a new brand, he went to the bin again for the material from which was produced that sensational success, Leopard Cigarettes—"Their Spots Never Change."

In Milwaukee, Wisconsin, three men fought on a street corner and did one another considerable damage. The desk sergeant at the police station made note of the fact that they had come to blows in an argument as to whether Happy Thoughts, Cleopatras or Leopards had the most delicate aroma.

* * *

Moral: We are a peaceable people, but we will go the limit for a Cause.—Stoddard King, in *Life.*

TOO SAD FOR BOLSHEVISTS

Calvin Coolidge, Jr., working in the tobacco fields at $3.50 per, is a picture to make a bolshevist weep. And when a 14-year-old boy hoes and pulls weeds under a blazing sun you can wager he's not doing it merely for political effect, even if his father happens to be president. —*Rock Island (Ill.) Argus-Union.*

NEW SIGNIFICANCE

With tobacco manufacturers using prune juice for flavoring the expression, "you're full of prunes," takes on an added significance.—*Eatonville (Wash.) Dispatch.*

A Brief Outline History of the Cigar Business in San Francisco

White Man Brought Solacing Weed to Indians on Pacific Coast — Pious Missionaries Smoked Mexican Cigars on Festal Occasions—Pack Mules Brought Luxurious Cigars from Campeche Semi-Annually—Residenters Always Want the Very Best.

By DAVID M. FRANKLIN

HISTORIANS say that Indians on the Pacific Coast did without tobacco until the white men came. West of the Rocky Mountains the precious herb did not grow, aforetime.

When California was a Spanish possession, stant, somnolent, undisturbed and scarcely nown, the pious missionaries, who were the rst white settlers, smoked Mexican cigars n festal occasions. Cigars from Campeche, rought on pack mules over the long rough ails semi-annually, obtained regard as veriible luxuries in San Diego, Santa Barbara or ther missions that then were outposts of vilization.

Attainment of Mexican independence ainly meant political changes in Alta Calirnia for a score of years. There was no reat progress. Once in a while, a sailing essel, from the Atlantic Coast of the United tates fetched trade goods and took away cargo of hides. Otherwise, commerce was o small that it could be adjusted to the pack addle. Few and far between, insignificant onsignments of cigars from Southeastern Mexico, coming on mule trains, arrived at California points. In the years of romance, vhen proud hidalgos owned uncounted acres f idle land, receipt of a cigar shipment was n event.

The Mexican War, the almost bloodless apture of California, the transfer of authorty, the annexation of territory, establishment f new government, the discovery of gold nd the tremendous rush of miners in 1849, nade San Francisco a world famous city.

In California, the auriferous earth yielded ortunes. The alluring yellow metal might e found among the grass roots. In El Dorado, wealth waited to be dug from the ground. Nuggets and dust rewarded the ucky seeker. From a small excavation, a nan got enough to make him rich. Though he labor was arduous, though hardship and rivation had to be endured, never before was so much money acquired in such a brief time.

Prodigal Spenders

In the land of gold, naturally there was prodigal spending. Suddenly lifted from poverty to affluence, successful miners would pay top prices for anything they desired. To eat, drink and smoke, the very best was demanded. For luxuries of all kinds, San Francisco speedily became an attractive market.

From Havana, the finest cigars were sent to San Francisco by way of Panama. Extravagant prices were offered for extra good smokes. In the early "fifties," San Francisco was Havana's best customer.

In a man's mouth almost constantly in those days a choice Havana cigar was a sign of success. It bespoke position, prosperity and power. The newly rich were eager to get big and precious cigars. Nearly every man of mark on the Coast was a confirmed cigar smoker. The sporting fraternity was especially liberal in buying fat, black cigars.

So obviously were cigars appreciated by the pioneers, for years and years, no Eastern city of twice the size consumed nearly so many good cigars as San Francisco did.

Up to the close of the Civil War the cigars smoked in San Francisco principally were imported Havanas and Manilas.

Even after the tariff law of 1866 had sadly reduced trade in imported Havanas elsewhere in the United States, San Francisco continued to be a big buyer of imported cigars. It was notable, too, that after the market for American made clear Havanas was established, the largest clear Havana account in the country, obtained by any brand, long was accredited to San Francisco.

Neither the nickel nor the dime cigar were quick to achieve popularity in San Francisco. Cigars that went double for "two bits" were favorites in the city that sits by the Golden Gate.

No particular description of cigar successfully claims an approximate monopoly of San Francisco trade today.

Of whatever origin, kind, brand, size or price, in San Francisco now a cigar has prestige and salability directly in proportion to its appeal to consumers.

Smokers buy according to their preferences. Every buyer may have his own opinion. Tastes differ. Predilections are not alike. A smoke one man desires another eschews. Here is discrimination; there is prejudice. Each picks and chooses to suit. All pocketbooks are not equally well filled. Ideas of economy often fail to jibe. A plumber may purchase what a banker thinks he cannot afford. In San Francisco, he who goes to select a cigar is given a wide choice. Most stores are well supplied. In Classes B and C, practically every important brand produced in the country may be found on sale in California. And the prices are reasonable.

In San Francisco, the climate makes humidors unnecessary. Cigars can be kept in perfect condition without much difficulty.

In the atmosphere of California there is something that enables the smoker to get the full benefit of whatever merit his cigar has. In San Francisco, the knowing visitor notices that tobacco retains its true character. The aroma hasn't evaporated. The flavor doesn't deteriorate.

One obtains greater enjoyment from smoking a cigar in San Francisco. Usually, the weed tastes better there than it would elsewhere. Each puff permits the smoker to ascertain what degree of excellence the cigar has. Blends may be judged correctly in San Francisco. The virtue of this composition or that can be determined rather accurately. A brand has to be worth while to secure real popularity on the Pacific Coast.

Cigarists in San Francisco know their business. They are self-respecting. They have reason to be proud. There are many good stores and stands. Advantageously located, well lighted, inviting, handsomely furnished, kept in spick and span condition, designed and arranged to combine maximum service with extensive display, numerous cigar stores in San Francisco represent important and profitable investments. Hundreds of stores are devoted, practically exclusively, to the sale of cigars, cigarettes, tobacco, pipes and smokers' furnishings.

Cigarists in San Francisco realize the importance of turnover. Amount and variety of stock can be restricted to goods that will move continually. The wise San Francisco merchant doesn't want slow sellers, even though the profit may be larger.

Price cutting occurs, sometimes. But to a greater extent there is competition on quality. At customary prices, the hustling retailer seeks to offer superior value. Quicker turnovers and increased volume of sales assist the dealer to live and thrive, although he does give undeniably good bargains to consumers.

The wholesalers in the cigar trade of San Francisco mostly are long established and well known. Distributors and jobbers in California are numbered among the big men in the cigar business of the country.

Among the localities that class cigar manufacturing as a major industry, San Francisco is not included. Yet San Francisco makes good cigars, brands obtaining more than temporary popularity. Manufacturers have recognition and standing that causes them to be honored, deservedly, in the trade.

On the Pacific Coast are America's largest and busiest cigar importers. In San Francisco, cigar importing refers to Manilas. Popular in California in pioneer days, Manila cigars in recent years have gained greater favor. Manilas in Class A are on sale in most cigar stores in San Francisco. The market for higher priced Manilas is steadily increasing. The prestige of Philippine smokes in San Francisco is shown by a strong chain of Manila cigar stores. From San Francisco to all parts of the United States go shipments of Manila cigars. On a brand building basis now, the Manila business is becoming more important constantly. Its permanency is assured. Importers are preparing to handle bigger quantities. Their chief worry now is that they may not be able to import enough to fill all orders this Fall.

Cheerfulness a Notable Feature

In San Francisco, importers, manufacturers, wholesalers, and retailers are cheerful. The situation is encouraging. Trade improves and prospects become brighter.

The farmers and fruit growers of California are less pessimistic than they were. Nearly all crops are larger than usual. The deciduous fruit crop is a record breaker.

"It's the biggest fruit crop in the history of the State, an increase, in some cases, of more than 300 per cent over last year."

Deciduous fruits, shipped fresh from California this season to eastern points will amount to 65,000 carloads. From such shipments, the fruit growers of California will receive at least one hundred million dollars. The horticulturists of the Golden Gate are assured of coin enough to buy what cigars they want.

San Francisco confidently expects prosperity. Wonderful developments will occur in Northern California in the next few years.

REGISTERING A KICK

Robertson and Montgomery County tobacco growers have a legitimate kick against the Dark Tobacco Association regulations, and it ought to be heeded if the association is to survive.

These two counties grow top grades of the dark leaf and they always command a better price and earlier sales than the tobacco from Western Kentucky. These counties ought to be a district by themselves for grading and sales purposes, and they ought to have complete control of their end of the association.

The demand for this reform within the association is the result of mature judgment and is shared by such men as Judge John T. Cunningham of Montgomery, who did yeoman's work in the organization of the Black Patch.—*Nashville Tennessean.*

Park & Tilford and Schulte Stock for Employes

D. A. Schulte, Inc., is offering its employes Park & Tilford no par stock at $25 a share. Of this, 20 per cent must be paid when subscription is entered and the balance when certificates are ready for delivery. Company holds the right to abridge the amount of the subscription.

Dividends of 10 per cent per annum on the purchase price are guaranteed for a 5-year period beginning January, 1924. Employes must agree not to sell their stock for three years, during which time the company will take back such holdings at $25 a share.

A similar offering on similar terms is being made by Park & Tilford to employes.

Since acquisition of control of Park & Tilford by David A. Schulte interests, arrangements have been made by which $1,500,000 of loans due banks and others have been paid. Most of Park & Tilford's capital is represented by merchandise, receivables, other quick assets and cash, rather than plant.

The holding company, Park & Tilford, Inc., organized in Delaware with 200,000 shares no par, has already sold 100,000 shares of its stock at $25 a share to Mr. Schulte and his associates. Park & Tilford, Inc., is expected to be admitted to curb trading within a month and subsequently application will be made for listing on the New York Stock Exchange.—*Wall Street Journal.*

Park & Tilford Bonds Improved

Position of Park & Tilford 6 per cent bonds, due 1936, has been tremendously improved by passing of control of company to David A. Schulte interests. Later have already invested $1,500,000 new money in the enterprise to pay bank and other loans. This is in addition to what the Schulte interests paid Frank Tilford for his majority stock in Park & Tilford, estimated to be at least $1,000,000.

Within a few weeks Park & Tilford bonds have sold as low as 75. On announcement of the purchase of Mr. Tilford's stock by Schulte interests they sold up to 80 and are now quoted 84-86. Range of price since beginning of 1922 has been slightly below 70 to 92.

A Close Corporation

Park & Tilford has been practically a close corporation and balance sheets have not been made public. The new interests in the company are not prepared to give out any figures until their own auditors have been over the books. However, Dow, Jones & Co. have secured the following figures showing approximately company's cash and quick asset position as of May 31, 1922, compared with July 31, 1921:

Current Assets	May 31, 1922	July 31, 1921
Cash	$331,000	$476,000
Accounts receivable	1,172,000	1,716,000
Value of contract	500,000	.....
Inventory	2,055,000	1,954,000
Total	$4,058,000	$4,146,000
Current Liabilities		
Notes payable	$1,600,000	$1,029,000
Accounts payable	460,000	410,000
Taxes, etc.	65,000	145,000
Total	$2,125,000	$1,584,000
Net current assets	1,938,000	2,562,000
Debenture bonds	2,300,000	2,360,000

The debentures have a sinking fund of $60,000 annually. Company is understood to be willing to pay 80 for the bonds, but market for them has run ahead of the company's bid.

Bond indenture provides that net quick assets plus real estate and plant, excluding good-will and leaseholds, must be kept equal to outstanding bonds. Plant, machinery and equipment are valued at $2,000,000 or more. In addition, company has valuable contracts and concessions for sale of imported goods in this country.—*Wall Street Journal.*

International Tobacco Deal

The business world is awaiting with a great deal of interest the culmination of negotiations which are understood to be on between the Tobacco Products Corporation and the British-American Tobacco Corporation, an English concern. George Whelan, dominating figure in the American company, has just returned from one of his periodical journeys across the Atlantic, but he has maintained his characteristic reticence concerning the reported deal. The best that has been obtained from him is a refusal to deny the story. If such a deal were effected it would probably mean the organization of a new company, capitalized at $20,000,000 or possibly a great deal more, to take over the securities of the two consolidating concerns as subsidiaries.—*New York Herald.*

Sumatra Going Strong

Ralph Levine, the genial representative of H. Duys & Co., Inc., is sending in shoals of orders from his pleased Pennsylvania customers.

Western Demand Grows

Harry Lloyd, of D. Dreux, Inc., is in the Middle West. Mr. Lloyd reports an increased demand for the fancy Sumatra wrappers handled by his corporation.

Up-State Cigar Dealers Say Trade Is Not So Good

Spotty as Leopard, Report Salesmen—Fall Business Looks Trifle Better!—Too Much Breeze, for Ski-Writer!—Paul Can Prove It—Empty Cage in Zoo!—Travel North for Trade—Better Receipts Downtown.

NEW YORK STATE CAPITOL DISTRICT, Poor-Pulse-Week, 1923.

"If you can explain it, I can't!" admitted Jim Stubb, permitting his sample cases to fall to the well-seasoned maple flooring o' Stubb & Ash, Inc., as he wearily wandered into the Hot Chair Club after a week on the road. "Last week business was all to the worcestershire, full o' vigor and vim! This week you can't sell cigars with a premium of a thousand free with a hundred!"

"Sure, yuh should tell me that once or twice before, y' unnerstan," sneered Sam Ash, still busy with a few remaining vacationists, who wanted something to smoke, no matter what it cost. "Every week, now, yuh should say, yeh it's gittin' better! But them there order slips yuh should bring in ain't so awful positive about it, unnerstan me!"

Too Much Wind, Too Much Wind!

"Well, go out yourself next week, and let's see how much worse you can do!" growled Jim Stubb, slumping down in the last reserved seat for the Committee on Reports. "You're like that crowd o' gumps out there in the street, Sam, criticizing the Lucky Strike airman!

"There he is up in the sky there, two miles from rock bottom, writing his slogan in letters a mile long on the ski-blue of heaven, and down here in the alley seven out of ten of the mob are telling one another that you can't read what he writes with his smoke because there's too much wind!

"That's it—*too much wind!* There's too much wind everywhere! All of us seem to have too much wind when it comes to watching the other fellow's work! Still, every son-of-a-gun out in the gang there will admit that he knows what this smoke slogan in Albany is for—Lucky Strike cigarettes!"

They're Away, Thinks Paul!

"Yes, everyone can see it," agreed Paul Wessels, coming into the Hot Chair Club with a bundle o' General Cigar Company's products under each arm. "And they can also see our advertising in the current magazines for Robert Burns cigars.

"But, all in all, trade isn't what it should be, by any means. Too many folk out-of-town, I guess. Dealers all report slow business for August. Yet they look forward to brighter days next month, with the return of the pilgrims."

See Braddock About That Job!

"Certainly, operations will start with a big bang next week," encouraged Boss Braddock, he of the Royal Bengal zoo in the main tent o' the P. Lorillard Company's little cigar department. "That's why I'm looking for another man to sell our goods here. If you hear of a good man, willing to work, send him up to the Hotel Wellington, Albany.

"Friend Mosher here will cover this vicinity for the next two weeks on Flexos, Le Roys, Bengals, Between the Acts, Sub Rosas, Old Virginias, and the like. But we've got a lot of territory to make between Erie, Pa., and Newburgh, this State.

"And Bailey, who used to run in through the Capitol District once in awhile, is now operating in Pennsylvania. He's also got a hunch with a handle that he'll quit the road soon and open a retail store in Syracuse, where he used to be with Eaton, the retailer."

Vermont's the Spot—High and Wet!

"Retailers up Vermont way are not complaining," voiced P. V. Doyle general in command o' the Liggett & Myers Tobacco Company's Fatima brigade in these parts, as he, too, returned from a campaign with the Green Mountain Boys. "Vacationists up there make the old State a busy spot right now.

"Our salesmen are putting over a lot of cigarettes this month. Nowhere have we met with a kinder reception for Fatimas and Chesterfields. But it's hard to break in new men continually for our New York and Vermont territory. It seems as though missionary men switch jobs every week lately, and good men are scarce."

Same Old Stuff, Says Irving!

"That's very true," assented Irving Fulder, of the house o' Fulder, Albany, as he made friends with the Committee on Cigars. "Good cigar salesmen are scarcer still. In fact, they're gone with the dodo and the flavored five-cent cigar.

"No amount of coaxing, however, is any use when you find a retailer stocked up to the ceiling with goods. And all

ROCHESTER, N. Y.

cal merchants are stocked, no doubt out that! They're simply waiting for e great Fall business promised by all perts in the trade. Let's see—what's e official date of the arrival?"

Do You Manufacture Cigars?

"Oh, things might be much worse," lowed Sec'y Metzner, all the way from roadway and Beaver street via the fac- ry o' Metzner Brothers, as he looked rer the Committee on Gasoline. "Our gar plant has been quite busy this last onth, and we look for a pretty good utumn trade.

"Surely, local houses are not as rushed s they were a few weeks ago, but the ut-of-town jobbers haven't all felt the lump yet. And I really think we'll ave a rattling good cigar business when ne city people all get home from their acation trips and settle down to the egular thing."

Looks Like an Army Hospital!

"Well, we can't kick, either," said M. . Canaday, Jr., of the Hotel Ten Eyck igar stands, cafeteria-to-roof-garden, as e mingled with the Committee on Cots. For transient business in the hotel and t our several stands has been excellent his season.

"Fact is, the hotel has been using cots o accommodate the swarms of motorists nd others passing through from moun- ain and lake. And next week, with the reakup at Saratoga, coupled to the re- urning throngs from all resorts for chool openings, will make it absolutely mpossible for the Ten Eyck to take care f more than seven or eight hundred eople each night.

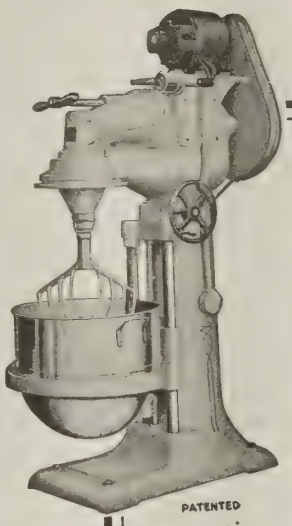
"Already we have been using these ots like a Government hospital! Folks speak for a sleep anywhere! Even the surrounding lodging houses are filled. And our cigar trade has kept pace with he rush. Honestly, we'll be glad when the middle of September brings some little relief."

Fairly Fine Downtown, Lord Mayor Hints!

"Very good trade has been our expe- rience, too, this summer," remarked J. W. Stevens, veteran State street dealer, as he passed through the Hot Chair Club. "Manager Shaxby reports better than average retail receipts, with very few ex- ceptions.

"And our location, between the rail- roads and river boats, is a pretty fair barometer for tourist travel and trade. It looks to me like a prosperous Fall and Winter business, unless all signs fail. Little things may come up to destroy con- fidence, but the outlook now is O. K."—THE SMOKER.

Interesting Tobacco Tests



Some very interesting tests have been made to determine which smoke contains the most nicotine. Long glass tubes, in one end of which the cigar, cigarette and pipe are inserted, the other end being con- nected with an exhaust pump, are used in the test. The nicotine is absorbed in filter paper. These tests showed conclu- sively that cigarette smoke contained the least amount of nicotine.

For example, Virginia cigarettes, con- taining 1.40 per cent nicotine, gave a smoke containing only 0.12 per cent nico- tine. Turkish cigarets, containing 1.38 per cent nicotine, gave a smoke with only 0.51 per cent nicotine. Egyptian cigarettes, with 1.74 per cent of the alka- loid, yielded a smoke with just 0.21 per cent of nicotine.

A Havana cigar, containing only 0.64 per cent nicotine, yielded a smoke with 0.20 per cent of the alkaloid.—*Cleveland (O.) Plain Dealer.*

On Inspection Tour

WASHINGTON, D. C., Aug. 22.—T. L. Hughes, Tobacco Expert of the Depart- ment of Commerce left here Sunday night for a ten days' trip through the tobacco territory of Virginia and North and South Carolina. While away, Mr. Hughes will also visit the cigar leaf sec- tion of Florida. His trip is in connection with the survey which is being made by the Department of the Tobacco Industry. —LAMM.

THE READ PASTE MIXER

In every cigar factory, large or small, gum trag must be mixed. This opera- tion, usually performed by hand, requires much time and labor. A Read Mixer will perform this work for you daily, giving you a much better paste as it will positively re- move all lumps and then, too, it will give a larger quantity from the same amount of material than when mixed by hand.

Used in the various plants of Otto Eisenlohr & Bro. Co.

Growers and Packers of Connecticut Shade Primed and Broadleaf

HARTFORD, CONN.

Mr. D. P. Gosline, July 14th, 1923.
6 Northampton St., Boston, Mass.

Dear Sir:

We have your favor of the 8th inst. and in reply to same would advise that we have used your large humidifier with the Duct System during our last packing season. It has proved satisfactory in every sense of the word. Our tobacco was kept in proper shape during the process of assorting and packing.

We were also very well pleased with the temperature feature, as we were able to regulate the temprature of our rooms from this humidifier except on extra cold days when coils were naturally used in addition.

The smaller humidifier, which we used in our bulk room, gave also pleasing results, and we are sincere when we state that of all the humidifier systems we have investigated, we believe yours gives the best results.

Yours very truly,
(Signed) A. N. SHEPARD & SON,
By G. W. Stewart.

San Francisco Observed Nation's Mourning Day

Tobacco Jobbing and Distributing Houses Closed All Day, August 10—Cigar Man in the Political Lime Light—Important Real Estate Transaction in Oakland.

San Francisco, Cal., Aug. 14.—Having been the scene of the final passing away of President Harding, perhaps no city in the United States outside of Marion and Washington more spontaneously observed last Friday, the day of his burial, as a day of mourning, than did San Francisco. The tobacco jobbers and distributors took no orders and made no deliveries, and dismissed their clerical forces for the day. While some of the retail stands were open a part of the day, there were others that were closed the entire day. So only places of the most absolute necessity, like the hotels and restaurants continued to do business, the latter closing for several hours.

The Joseph Ridaldo Co. closed up shop, notwithstanding it was a difficult thing, because it is in the very midst of a big San Felice campaign, with orders crowding. They have too just been swamped by an avalanche of new goods still crowding their space, in the original cases. They are preparing for an enormous fall trade.

Seeking to Serve the Public

Adolph Judell, civil engineer and cigar man, is receiving loyal support from the cigar fraternity as candidate for supervisor. He says that he has found surveying and engineering and cigar distribution have more in common than most people might suppose. When he took position as secretary-treasurer of H. L. Judell & Co., and began to delve into the problems of the business, he found it was necessary as in any engineering proposition, to survey the ground carefully and locate the foundation well. Then it was necessary to take account of the materials and resources necessary to build the business, just the same as in building a dam. Then the problem of obtaining, moving and placing those resources and materials complete the work of building the business. Mr. Judell states that he feels he can reasonably expect the support of the tobacco trade including the retailer; for while, naturally enough, not all retailers have been customers, they can point with satisfaction to the fact that they have always been fair to their retailers, and have refused to sell anything at wholesale even to their best friends, who were not dealers, referring them always to some convenient retailer who handles their brands. And in these days of freak legislation, a friend in court is sometimes worth having.

United Making Big Realty Purchases

Perhaps the most attractive place for investment in California just now is the city of Oakland. Coldwell, Cornwall & Banker, and A. M. Rosenstirn, of San Francisco, have been putting over some big real estate deals there in central business property. Among others they have sold the northwest corner of Eleventh and Washington streets for the United Cigar Stores Co. In turn the United Cigar Stores bought the southeast corner of Eleventh and Broadway, one of the choicest corners of the city for the reported sum of $350,000; a portion of which lot they resold, keeping the corner. Altogether, through A. E. Baeder, president of the real estate department of the United Cigar Stores Co., they have purchased near $2,000,000 worth of Oakland business property. This includes two other of the finest corners, that of Washington and Twelfth streets, representing an investment of $700,000, and the northeast corner of Broadway and Twelfth street, an investment of $500,000. Through the above agents they are negotiating for another large holding not far from those already obtained. The wonderful factory growth of Oakland, combined with its great harbor improvements made and proposed, is bringing to the city great numbers of highly paid skilled artisans, which explains the great rush for choice business locations.

Must Learn to "Chaw" Their Own

Now that they are beginning to use prune juice to flavor chewing tobacco, it is pointed out that California, especially the agricultural part, will have to begin

Live Trade Notes

mong the visitors to the city of the den Gate has been George Southworth, well-known tobacco merchant of opah, Nev., who is giving the city a on his return trip from Los Angeles.

. N. Snover, the Judell salesman, has making a visit to the city, and reports a good run of business in the San quin valley.

ouis Polaski, of the Polaski Cigar formerly representative of the Amern Cigar Co., at San Francisco, is up rn the Angel City doing the handke act with old acquaintances.

. J. Lachman, of the Sumatra Amern Tobacco Co., has been up from Los geles on his regular trip.

I. L. Judell reports enjoying himself, n improving health at the beautiful na Vista resort near Los Gatos.

he Samuels chain of stores has added ew Fresno store. It manufactures a nd of its own in Los Angeles and ntains stores in Fresno, Stockton and kland.

ulian Solmonson, the popular retailer the Spreckles Building, is taking his ation in the hospital. His condition is nounced not serious; so he will soon back pushing business as before.

am Israel, the jobber of Jackson et, is off for a two weeks' vacation through the south part of the state. keeps his business in such good shape it runs right along. In fact, it is ning so well since he left, they are atening to wireless him to stay away ile. He has been faithful enough to a good stay-away anyhow.

. Cobletz has sold the concession he ntly purchased of J. Gleichman at Stune Beach in Alameda, and has ned a fine store at 205 California et, the old Bay State location. He an attractive barber shop in the rear.

he P. Lorillard Co. is starting a billrd campaign on Climax. A. E. Fagan, division manager, has returned from famous Rodeo at Salinas, where a ket-knife was given away with every g.

A Change of Owners

ALLEY CITY, N. Dak., Aug. 16.—John Rourke has been succeeded in the ir and billiard business by B. W. nne.

Chews Tobacco 60 Hours

JONESBORO, Ga., Aug. 18.—Dan Henderson can rest on his laurels today (p'tuh!) for he is the champion long distance tobacco chewer of this town and perhaps this United States.

Jonesboro has watched the different types of marathon and endurance contests of late and finally decided it would stage one itself. It called for entrants for a tobacco chewers marathon, and more than two score men at once accepted the gage of battle.

The rules provided that each man would take a big plug and start away. The one still on his feet and chewing after the others had quit from chewers' cramp would be acclaimed a champion. Contestants could eat and sleep, but were not allowed to relinquish from their mouths the plugs upon which they started.

Ready to Meet All Comers

When the whistle blew for the getaway forty-six pairs of teeth clamped down on forty-six plugs. Hour after hour the contest went on, until after two and one-half days of continued effort Dan Henderson was the only one who retained a part of his plug and whose teeth still moved in even mastications (p'tuh!). Dan Henderson chewed alone, and he vowed he could keep on for another day or two when his physician declared lockjaw might develop, and stopped him.

The champion, after the contest said he was ready to meet all-comers. Meantime the Jonesboro City Council is considering legislation that forbids all future marathons of this nature within the city limits.

Spanish Regie Prospers

WASHINGTON, D. C., Aug. 18.—Tobacco monopoly in Spain (Compania Arrendataria de Tabacos) for 1922-23 has made more profit than in any previous year of its existence, according to a report from Charles H. Cunningham, Commercial Attache. Sales aggregated 394,652,712 pesetas, against 346,101,167 pesetas during 1921-22. After deducting expenses there remained a net income of 235,274,307 pesetas, compared with 194,530,881 pesetas in 1921-22. The state treasury participated to the extent of 227,133,251 pesetas and the Compania Arrendataria de Tabacos received 8,141,055 pesetas.

Chicago Trade Notes

CHICAGO, Aug. 18.—The Dell Smoke Shop, an up-to-date retail cigar store that was opened a few months ago by Dell Bros., at 436 South Wabash avenue, has "hit the rocks." Fred E. Hummel, trustee for the benefit of the creditors, had the Samuel L. Winternitz Co., auctioneers, sell the stock at auction Wednesday. About 50,000 cigars of well known brands, and a large stock of cigarettes, tobacco, pipes, candies and smokers' articles, including all fixtures, were disposed of. What the creditors will receive (and almost every house in Chicago "is in") remains to be seen.

Sam Zuckerman of the H. L. Rogers Co., New York, spent several days here. Sam is interesting the merchants in his amber and gold cigarette holders this trip. He has them in price from five cents to $35 each.

Sojourning in Atlantic City

Clarence Hirschhorn and Mrs. Hirschhorn have left for Atlantic City and will not return until Labor Day. They will stop at the Ritz-Carlton Hotel, where Mr. Hirschhorn will be glad to meet any of the trade who may be in Atlantic City during his visit. While away his sales force will continue to boost for El Producto, Optimo, Harvester, Little Tom and Detroit Hand Made, all of which are big sellers here.

Harry Rogers of the H. L. Rogers Co., New York, passed through Chicago a few days ago, homeward bound from a very successful western trip.

New Accounts in Wolverine State

B. Cleenewerck & Son of Kalamazoo, A. F. Hintz & Son of Saginaw, L. W. Smith & Co. of Adrian and W. F. Rice of Grand Rapids, Mich., are new connections opened by Herbert V. Mesick for Cuesta-Rey cigars. Herb's business for Cuesta-Rey cigars gets bigger and bigger each month—in fact it is so big that Cuesta, Rey & Co. have written him to book orders subject to delay.

Golden D. Mann and Geo. M. Platner, both leading dealers in South Bend, Ind., will offer the Pancho-Arango, made in bond cigars in several ways.

Gus Stanage, the popular manager at the main store of Fred L. Wells, is up in northern Wisconsin on a fishing trip. In the meantime Mr. Wells is doing a "regular watch" behind the counter, and he still shows that "old speed" for which he was noted here for many years "as one of the best who ever went behind a showcase."

Robert Ellis of E. P. Cordero & Co., after several days in our city featuring Mi-Hogar cigars for Many-Blanc Co., has left for his home in Detroit.

Retail merchants from 38 states, 1,400 in number, and representing many lines, held their annual convention here at the Hotel La Salle. The purpose of the meeting, according to its sponsors, was to develop new business building plans and afford merchants the opportunity to exchange ideas on retail merchandising.

A full half page newspaper ad. introduced Pall Mall special size to the Chicago smokers a few days ago. This new offering of the American Tobacco Co. is packed in red boxes of 20, to retail at 30 cents. It is a little smaller than the regular Pall Mall, and the way it has taken hold for a newcomer indicates that it will be a big winner.

Reports Business Fair

Wm. Hickey of Hickey Bros., who operate 13 stores, seven in Davenport, Iowa, three in Rock Island, two in Moline, Ill., and one in Des Moines, Iowa, says business is fair and that there is lots of room for improvement. They distribute the General Cigar Co.'s brands and White Owl is selling like "hot cakes" at present. They have recently added the Hava-Tampa and Regulus clear Havana, made by José Pendaz, an old friend of theirs for over 20 years. In the old days Hickey Bros. featured strongly the then clear Havana cigar, which Pendaz sold.

Wm. Harbich is now calling on the city trade in a new machine. He sells San Alto for the San Alto Cigar Co.

Irving Hahn of R. Steinecke & Co., New York, is back at his Chicago headquarters after a swing around the Middle West.

New Size

A new 20 cent size of Pancho-Arango made in bond cigars is being placed with the trade. It is known as the Belmont size and is packed 50 to the box.

Robert Bacon cigars continue to gain in sales and Grommes & Elson are having a hard time getting enough ahead to take care of the demand.

Charlie Kreyer, the Hirschhorn Loop star, is keeping up his sales record, and all over the downtown section he has Harvester, Optimo, El Producto and Detroit Hand Made well placed.

At the Half Century Mile-Post

Lyman Baum, general manager of A. Santaella & Co.'s New York office, will arrive in a few days. While here he will celebrate his fiftieth birthday. Chicago was Baum's former home and as most of his relatives live here, this is where he will stage a big "blow-out."

Don Pancho Arango, of Arango & Arango, Tampa, makers of Don Sebastion and Don Pancho cigars, graced our Loop this week. Senor Arango was "steered" around by his general representative, George W. Stocking. Both report business as being very good and Arango was highly pleased at the reception the trade gave him while here.

fire in the Enterprise box factory Cherry street and Francis avenue, st Tampa, was quickly put out Friday ning when the West Tampa fire de- ment arrived. Little damage was e by the blaze, which was caused by explosion of a gasoline stove.

gar Box Men to Meet

HICAGO, Aug. 18.—Invitations have n issued to cigar box manufacturers ll parts of the country to attend the th annual convention of the National ar Box Manufacturers' Association, e held August 30-31 in the Drake el. It is expected that this will be most important gathering in the his- of the association. A large at- lance is anticipated, it having been ounced that the Philadelphia delega- will come in special cars, and that w York, Detroit, Cincinnati and other s will be well represented.

. G. Merz, of G. Merz & Son, this , is chairman of a special committee in charge of arrangements. Other members of the committee are: W. D. Rosenberger, of Chicago Box Co.; A. C. Henschel, of A. C. Henschel & Co.; B. E. Henschel, of C. B. Henschel Manufacturing Co.; O. A. Fisher, of O. A. Fisher & Co.; Norbert Mueller, of Mueller & Son Co., and H. A. Webster, of Chicago Mill & Lumber Co.

The program includes several addresses on topics of special interest to the cigar box manufacturers, reports on matters concerning costs and freight rates, and general discussion of conditions in the industry at the present time. Special arrangements have been made for the entertainments of the visiting delegates, including sightseeing tours of the city, theater parties and other features.

To Move Office From Gotham to Tampa

Marcelino, Perez & Co., manufacturers of clear Havana cigars in bond, including the well-known Tuval, Redencion and Ponchartrain brands, plan to remove their business and distributing headquarters, now at 709 Sixth Avenue, to Tampa, Fla., where their factory is situated, on October 1.

Manuel L. Perez, in charge of distribution, states that there will be no changes in the management, and that each member of the organization will continue to follow his duties, as formerly. He declares that the move has been decided upon to insure constant personal contact with the factory, and that the change will insure prompt and efficient consideration to the trade.

Mr. Perez will not desert New York entirely, however, as he promises to visit Gotham several times in each year, after the change takes place.

Mazer Gets Davis Plant

NEWARK, O., Aug. 18.—The Columbus plant of the A. Davis Cigar Co. was taken over by the Mazer Cigar Co. of Newark and is now being operated in the same location as a branch of the Newark company. It was announced in a statement by the G. J. Schaeffer Co. that the Schaeffer company had purchased the plant.

H. C. Gundlach, of the Mazer Co., declared that the Mazer company took over everything except tobacco boxes and forms for certain private brands which had been manufactured by the Davis company. The Davis company's foreman and employees remained at their benches and are now producing Mazer products, Gundlach said.

Connecticut Notes

ARTFORD, Aug. 19.—Tobacco growers a: been favored with very fine weather ng the past two weeks, and the har- ng of the Connecticut "bumper" crop been pushed along very rapidly, and he Glastonbury and Hockanum dis- s some of the growers are through harvesting and are now resting easy, not worrying about any possible n damage.

he growers feel proud of their 1923 of tobacco and are working hard get it "under the shingles." They that it is a very expensive proposi- to harvest the crop, as help is scarce wages are soaring. As high as $7 day is being paid, and even at these es there is not enough labor avail- . Even boys are getting from $2 to er day and about all they do is to the plants to the stringers, the rest the time keeping the "boss" busy ching them to see that they do no hief.

dications are now that all the avail- shed room will be occupied as the is filling up faster than it has in ner years.

few mornings during the past week e the growers warnings that they t keep hustling along with the har- as the thermometer has been down 48 degrees, and warming up during middle of the day.

lear weather, with good currents of have prevailed during the day and sheds get a good "blow out," and growers are very hopeful that these rable conditions will prevail for some ks to come. Such weather is needed ure the crop without pole sweat.

rowers refrain from "firing" their ls to prevent pole-sweat, unless they absolutely obliged to.

he shade growers are also hustling it along, and are now on their third nings with the first primings well ed and will soon be ready to take n and go into the warehouses for king.

udge L. P. M. Hickey, chief of the ld Service Department of the Con- ticut Valley Tobacco Growers' Asso- ion, was in Maine during the week, addressed a meeting of the potato wers at Presque Isle. They are con- ring the formation of an association the co-operative marketing of their atoes. Judge Hickey has had consid- ble experience in the forming of asso- ions, and to him much credit must be en in the formation of the tobacco wers in the Connecticut Valley.

Mr. Osterwise of New Haven, who es the "Judge's Cave" cigar, has been South Windsor picking up a few ps of 1923 at prices reported to be at cents per pound, assorted.

Tobacco Shed Burned at South Windsor

SOUTH WINDSOR, Conn., Aug. 18.— e of unknown origin early this evening troyed a large tobacco shed here ned by David Daly. The loss is esti- ed at $20,000 and is partly covered insurance.

he fire started at 7 o'clock and made a rapid headway. The fire department from East Hartford was summoned but arrived after the fire was well started. The shed was filled with shade grown tobacco.

The Tobacco Growers' Association

Recent reports from the Connecticut Tobacco Growers' Association indicate that that newly organized co-operative association is proving a wonderful success, and is a good illustration of what farmers can do when they employ business methods.

For years tobacco growers were at the mercy of buyers, and were compelled to accept their prices or see their crops rot. Early in the summer buyers would visit tobacco farms and make the growers an offer for their crop. It was usually a case of accept that or nothing, for buyers had a gentleman's agreement among themselves not to intrude upon each other's territory. The grower had no other market for his product. Many a stubborn grower refused a low offer only to regret it later when he found that he not only could find no other market, but that in the future he was blacklisted.

The Growers' Association has changed all this. Now every grower takes his crop to a central warehouse where it is sorted and graded and he gets exactly the same price per pound as his neighbor regardless whether he has a pound or 20 tons to sell. The association employs several highly paid officials that are business men of the best, the highest repute as is proved by the selection of Joseph Alsop as president with a salary in the neighborhood of $25,000. One of the first things Alsop did was to go into the money market and borrow upward of $6,000,000 to finance the first year's crop. Next, a co-operative insurance arrangement was planned that saved the growers a tremendous amount of money, and now comes the announcement that the new crop is to sell at prices ranging from 35 to 50 cents a pound as compared with that of a year ago which ranged from four to 25 cents.

Aaron Shapiro who organized different fruit growers' associations in the West was called in to organize the tobacco growers. His theory is that to be successful, an association must be based upon product and not upon territory. In other words, the Connecticut Valley tobacco growers produce a certain kind of leaf that is not grown in any other place. Hence they can form a monopoly of their crop without competing with the tobacco growers of the South who grow an entirely different kind of leaf. Connecticut valley tobacco is used chiefly for cigar wrappers, that of the South for pipe tobaccos and fillers.—*Pittsfield (Mass.) Eagle.*

Supervises Big Harvesting

Alfred I. Meldelsohn, of Meyer & Mendelsohn, Inc., is in Connecticut, supervising the harvesting of the big tobacco crop controlled by this enterprising organization.

Danville's Opening Date Set for Sept. 25

DANVILLE, Va., Aug. 20.—The Danville Tobacco Association has voted to open the auction sales on the Danville market, September 25, the same date as that suggested by the United States Tobacco Association at its annual convention held a few weeks ago at Asheville, N. C. The board of trade of the various market towns in the old belt were expected to meet and to ratify this date or to make such changes as they saw fit, inasmuch as the opening dates for the different belts are not compulsory. It was at first thought that efforts would be made to delay the opening of the local market because of the lateness of the crop, but when the meeting was called no such development was noted. Warehousemen generally were anxious to begin sales on the announced date so that there should be no confusion among the farmers. They were, however, anxious that there should be on hand a full corps of buyers in order that the market prices would be high and at the meeting the assurance, while not given, was implied that the imperial and the export companies would have their buyers on hand.

The number of sales will be left to the Sales Committee of the association. The meeting voted down a recommendation that two sales be put on at the opening, the feeling prevailing that farmers might get the impression that two sales would be inadequate and that they would experience delays in disposing of their tobacco. The Sales Committee will be guided by conditions at the opening of the market and will order as many sales as are necessary.

Reports from eastern Carolina are to the effect that recent heavy rains have begun to damage the crop there.—TETLEY.

Receipts and Sales in the Carolina Markets

WILSON, N. C., Aug. 18.—A compilation of receipts of tobacco by the auction houses of the South Carolina Belt, shows a total of 18,500,000 pounds to date. No change is reported in the prices paid for the common and medium grades but the market is right much stronger on the better grades. As indicated in our letter at the opening in the South Carolina Belt, the crop, as a whole is only a normal one in quality, but about 25 per cent increase in quantity. Your correspondent was one of the few at that time holding this view of the situation, but it now appears that all the others are coming to his way of thinking. No figures are as yet available as to what the crop is now averaging in the South Carolina Belt, but an average of 23 cents would not be far out of the way.

The Co-op Figures

The Co-operative Association is *claiming* to have received up to the present, 5,000,000 pounds. There is no way of ascertaining the correctness of the claims. The Agricultural Department of both South Carolina and North Carolina require the auction houses to report, under oath, monthly, a statement of their receipts. No such requirements are *demanded* of the co-operative association, and for this reason its figures as to receipts are always taken with a big "grain of salt." Well informed tobacco men, just returned from the South Carolina Belt, think that 3,000,000 pounds would be a great deal nearer right than 5,000,000. But, conceding its claim of 5,000,000, for the sake of argument, it would mean only 21 per cent of the gross receipts, as against 36 per cent of the crop received by it in that belt last season, or a falling off of over 40 per cent.

The Pitt County Cases

Much interest is being aroused over the outcome of the cases booked for trial the coming week at Greenville, wherein 108 members of the association are sueing the association for a return of their contracts, alleging that they were procured by fraudulent representation. The cases will be hotly contested by the association, and able attorneys will represent both sides. Judge Lloyd Horton, the distinguished young jurist, will preside, and it is more than likely that all of the cases will be tried by a jury, inasmuch as issues of fact are raised. There was a strong effort made yesterday on the part of counsel for the association to continue these cases, the matter being heard in chambers at Farmville, but the court ruled that the cases would come up as set upon the calendar of Pitt County.

Crop Conditions

All kinds of crops in eastern North Carolina are looking good, and if tobacco and cotton sell as well this season as they did last, on account of the size of the crops, there will be an era of great prosperity throughout this entire section.

Association Receiving Stations

The Co-operative Association has designated the following places as Receiving Stations: Ayden, Ahoskie, Baily, Burgaw, Clinton, Farmville, Goldsboro, Greenville, Kenly, Kinston, La Grange, Maysville, Nashville, New Bern, Pinetops, Robersonville, Rocky Mount, Richlands, Snow Hill, Spring Hope, Smithfield, Tarboro, Vanceboro, Windsor, Wendell, Williamston, Warsaw, Washington, Wallace, Wilson and Zebulon.

The Auction Sales

The auction houses will open, as heretofore announced, on August 28. Quadruple sales, as formerly, will be run at Wilson, with a probability of quadruple sales also at Greenville, and with triple sales on all the large eastern Carolina markets. Everyone is anxiously awaiting the opening of the auction houses, for

Flynt Tobacco Co. Getting Addition in Shape

Winston-Salem, N. C., Aug. 18.—The large addition to the J. G. Flynt Tobacco Co., which practically doubles the capacity of the plant, is about completed. The building itself will be ready for occupancy within the next few days, and it is thought that within a month the new machinery that has been made necessary by the enlargement of the plant will be installed and everything gotten in running order.

The addition is to the rear and adjoining the main brick structure on Oak Street. It is forty feet in width, 166 feet long, and five stories high. The original building is but four stories high, but on account of the slope of the ground the addition has five and still remains on the same roof level.

According to T. P. Fulton, president and treasurer of the company, the business of the concern has developed to proportions entirely too big to be handled without additional space. The new part of the plant will be used practically entirely for the manufacture of chewing tobacco, while all of the old building will be devoted to turning out smoking tobacco.

The addition is constructed of brick, braced by steel girders. A sprinkler system has been installed, making the building practically fireproof. One of the distinct features of the construction is the outside elevator shaft and the outside stairway. Both of these shafts are entirely fireproof in every way and so designed that in the event of a fire, no one could be possibly cut off from escape.

With the additional space provided by the new building it is the plan of the company to greatly increase their output of both chewing and smoking tobaccos. With this in view, they are getting in only the newest and most modern machinery for this work. When the new machines are installed they will be run entirely by electricity, thereby doing away with the old method of steam, and consequently saving much in time and labor.

The famous brands of both smoking and chewing tobacco turned out by the J. G. Flynt Tobacco Co. will be continued. The two most famous brands of smoking tobacco are Black Jack, and Sir Walter Raleigh, while the chewing tobacco brands, known the country over, are Pride of Winston, Ox and Big Boy.

"But manufacturing space was not the only thing needed in this rapidly growing company. They had to have more storage, therefore on the east side of the street, adjoining the large warehouse they already had, the company is constructing a warehouse which will have, when completed, about 20,000 square feet of floor space. This warehouse is one hundred by two hundred feet, built entirely of cement and steel, covered with an extra heavy sheet iron roof. In this immense warehouse, the tobacco to be cured in hogsheads will be stored until it is ready for use in the factory.

Mr. Fulton said that the growth of the business of the company is increasing steadily and that with additional equipment provided, he is looking forward to the biggest year in the history of the company. He views the business situation most optimistically, this being based upon information and "evidences" received by him through the company's representatives in every part of the country.

Rumored That Barker Is To Resign

Augusta, Ky., Aug. 18.—The *Chronicle* of this place says in its editorial page:

"The *Chronicle* learns, unofficially, that it is the intention of R. M. Barker, Director of Warehouses for the Burley Tobacco Growers Association, and one of the prime movers in the formation of the organization to resign, effective September 1. Mr. Barker has given his full time toward the success of the farmers' movement from the beginning, and it is to his untiring efforts that much of the success of the Association is due, and if he does not reconsider, and his resignation becomes effective it will be a distinct loss to the tobacco growers of the entire tobacco growing district. If there is any way to keep Mr. Barker as one of the heads of the Association, no move should be left undone to do so. Mr. Barker is honest, has the best interest of the growers at heart, and is one of the best posted tobacco men in the country, and by all means he should be induced to remain. Salary should be no object when men like President Stone and Mr. Barker are considered. Mr. Tobacco Grower, this contemplated resignation is of vital importance to you."

Wants Co-op Perfected

Nashville, Tenn., Aug. 18.—G. F. Sanders, of Dickory Point, Tenn., recently writing to the *Banner* of this city, says:

"There is a good deal of dissatisfaction about the tobacco association we now have, and I think justly so. In the first place the speakers, committees, campaigning to get signers to the contract, promised lots of things that is not in the contract. And seven out of ten signed it without reading it—some of them couldn't read it, and that is the class of people being the hardest to satisfy, because they don't understand.

"Now don't destroy the association, let's perfect it, and all get in. And the way to do this is to give the farmers control, something they haven't got under

this contract. The way to give the farmers control is through a delegation of their own selection, and the way for them to be selected is for each school district, or not over three districts, to meet at the most suitable place, nominate and elect their manager, graders and attorneys, also to elect a delegate from each district and send him to their respective sale place, to Clarksville, Springfield, Hopkinsville, and so on, and send them every two weeks to their sales places and don't send him twice, send a new man every time. Don't let the same man go oftener than every fourth time. If they do, they will organize and steal something. Now this is no reflection on the gentlemen now employed, it means the one you will hire, and let each and every transaction be subject to their approval, and the property belongs to the farmers if they pay for it, and not the preferred stockholder, as is now the case.

"If I understand it, now the people that wrote and influenced the writing of this contract, knew that they were taking the advantage.

"There is not any objection to the membership part of this contract, it is not any too tight, and not any too slack—just right. But the official part of it is very weak, and they intend for it to be."

Kentucky's Tobacco Crop

LOUISVILLE, Ky., Aug. 18.—The August crop report, issued by the Louisville office of the United States Department of Agriculture, forecasts a production in Kentucky of 534,965,000 pounds of tobacco, compared with an early estimate of 522,887,000 July 1, and a yield of 406,250,000 pounds last year. The increase is due to increased acreage.

The nation's tobacco crop is forecast at 1,473,837,000 pounds compared to 1,324,840,000 pounds last year and 1,361,149,000 pounds average annual production 1917-1921, inclusive.

Fear Loss from Premature Harvesting

LEXINGTON, Ky., Aug. 17.—Experienced tobacco men in this section are almost unanimous in their opinion that burley tobacco is being cut too green this year and that serious losses may result from houseburn in curing, due to the fact that the crop has made a rank growth and is full of water.

J. R. Cunningham, of this city, and F. M. Nelson and J. L. Gorin, both of Louisville, all tobacco men, visited the Kentucky Agricultural Experiment Station Thursday morning for a conference with Director Thomas P. Cooper and tobacco men of the experiment station on this matter. Mr. Cunningham pointed out that many fields of tobacco in this section are being harvested before the crop is old enough to mature properly.

In speaking of the early cutting now going on throughout the burley belt, E. J. Kinney, a member of the experiment station agronomy department and a tobacco specialist, said, "It is true that the experience of tobacco growers in recent years indicates that cutting burley tobacco fairly early usually gives leaf of better quality, considering the present market demand, than is obtained by letting the plants stand until they are fully ripe.

"There is no question, however, but that this matter of early cutting can be carried too far. Harvesting a crop of burley while very green gives a much lower yield than when the crop is allowed to become mature. In addition it is much harder to cure an immature crop without injury, particularly in such a year as this in which the tobacco has made a rank growth and is full of water. Unless the weather is exceptionally favorable for curing, it is almost impossible to prevent houseburn in green tobacco.

"Undoubtedly many of the growers who are cutting their crops green this year are doing so because of the danger of serious damage from rusts, including wildfire. Tobacco badly infected with wildfire probably should be cut now, but some growers and buyers of wide experience say that less damage results from the wildfire than from cutting the crop green and housing it under unfavorable conditions.

"The best plan where rust is not doing damage is to watch the crop closely and not cut until danger from rust damage makes it necessary.

"It should be remembered that early cutting lowers the yield and it is doubtful if the price between early cut tobacco and that which is fully matured is enough to make up for the difference in yield."

Ton an Acre Tobacco Club

SPRINGFIELD, Tenn., Aug. 18.—C. H. Moody, county agent of Robertson county, has under way a "ton an acre tobacco club" and he says it is growing and that Springfield is going to have a real tobacco show this year; one that will be the biggest ever held in the dark-fired district. The show is open to all who market their tobacco at Springfield. Men will show tobacco here from Joelton to Adairville, from White House to Sadlersville. The only regulation is that it must be the product of a measured acre.

Makes Some Important Leaf Purchases

Celestino Lopez, of Arguelles, Lopez & Bro., cigar manufacturers, of Tampa, Fla., has been surveying the local leaf market and picking up choice offerings for his organization.

Paducah Prospects

PADUCAH, Ky., Aug. 18.—There is no news about the loose market, neither is there any of the hogshead market. No doubt some sales have been made by the Association, but they have not been made public and if there has been any business at all it has been of little consequence.

The Association is practically through prizing and has been drawing some fresh samples, but the tobacco generally has not been in the hogshead long enough to assimilate and show as it will later, and the probabilities are that the managers will wait until it has passed through the sweat before sampling to any extent.

The weather continues unfavorable on the growing crop. Heavy rains fell over the entire district during the past week, and we have heard of a little damage from hail, but so far the damage from this source is very slight. The greater damage is to the early tobacco that is beginning to ripen. It is taking the second growth which means to make it rough and coarse in quality, and a dry, hot spell is badly needed.

Damage from Overflow

I reported last week considerable damage from overflow and washing, which no doubt caused a considerable loss. On the other hand the tobacco grown on upland is getting a larger growth than usual and the loss from overflow may be made up in weight by reason of the uplands making larger tobacco than usual. Aside from the damage I have reported there have been no bad developments. We have heard of some black fire, but so far it amounts to but little, and if weather conditions will become more favorable, which means dry, hot weather, there is no reason yet why we shouldn't have a splendid crop of tobacco and the heaviest yield that we have ever had. The greater part of the crop was planted early and has grown already to be oversize and the yield will be heavy, and more long tobacco than usual. The later plantings are growing splendidly and may make the best part of the crop when it comes to quality, but at this stage of the game it is impossible to say how much of the quality and the yield may be curtailed with a continuation of unfavorable weather conditions.

The Dark Tobacco Grower's Co-operative Association managers are organizing throughout the district and will soon start an intensive campaign to increase their membership. What the outcome will be remains to be seen.—W. B. KENNEDY.

Springfield Auction Marts To Be Open

SPRINGFIELD, Tenn., Aug. 18.—All of the loose floor sales houses of Springfield announce that they will be open for business the coming season, says the *Herald-News*, and will handle tobacco as has heretofore been the custom.

There will be four houses in operation. These are the E. J. Gunn Tobacco Co.; McMurry Loose Leaf Tobacco Co.; Tennessee-Kentucky Tobacco Co., and the Farmers Loose Leaf Warehouse Co. Some talk has been going the rounds that a new sales house would open before another crop came on the market, but nothing definite has been given out. Many believe the proposition will fail to materialize.

So far as is now known no change in the methods of the loose floors is contemplated. Tobacco will be offered at auction as heretofore, the owner being given the right of rejection. Two sales each week will be held and sales will come oftener if deliveries justify it. Tuesdays and Fridays will be sales days, the market to open about December 1. Some loose floor operators, however, are opposed to an early opening of the market, saying that it is better for all concerned if sales are not started before the first week in January.

Loose floor operators express themselves as well satisfied with the business they had during the past season and they are expecting many farmers to again choose this method of selling their crop the coming year.

Dark Co-op Wins Victory Over Member

HOPKINSVILLE, Ky., Aug. 18.—The Dark Tobacco Growers' Co-operative Association yesterday won a sweeping victory in its first case against a contract violator in Tennessee when Judge Joseph Stout, chancellor of the chancery court at Springfield, upheld the pool contract in that State.

R. H. Mason of Robertson County was the defendant in the suit filed by the pool several weeks ago in which association counsel alleged that Mason "dumped" a large portion of his crop on the loose floor. When the case was first called at Springfield on the 10th of July the defendant asked for a continuance and it was reset for the 15th of August.

Mason's attorneys demanded a jury when the case was first called and Judge Stout granted their request in order that there might be no question of a fair trial. The defendant then held that no association member was qualified to pass upon the issues of the case and, as association counsel did not object, twelve non-members were chosen for jurors.

Judge John E. Garner, Mason's attorney, attempted to prove that the contract was obtained by fraud and that the association was mismanaged. Much of the testimony introduced by him along this line was excluded from the records by Judge Stout, who made it plain in his instructions yesterday that the contract was valid and was obtained legally.

The defendant then placed W. H. Simmons, a Springfield tobacco man, on the stand, who sought to show in his testimony that the association was mismanaged. After hearing everything Mr. Simmons had to say, the court ordered that all of his testimony be excluded from the record.

R. E. Cooper, director of warehouses of the association, showed conclusively that tobacco in the pool was handled in a business-like way and at a cheaper price than the tobacco on the loose floors. At one point when he was asked by Garner why so much dissatisfaction existed among the members in some sections of Robertson County, he said, "It is for the same reason that the Children of Israel were dissatisfied when Moses led them out of the wilderness."

The crowd in the courtroom applauded lustily when Mr. Cooper made this statement and the court found it necessary to rap for order repeatedly.

After all the testimony had been given yesterday and inasmuch as neither side demanded argument, the court ruled that there should be no argument and he gave the case to the jury. The jurors deliberated for three hours before returning the verdict on the issues of fact.

They found for the association on all points but three which were considered immaterial.

Mason's attorney, recognizing the fact that his battle was lost, immediately filed a motion for a new trial which was taken under submission by the court who set September 14 as the date for hearing.—PRESS SERVICE INFORMATION BUREAU.

Owensboro Outlook

OWENSBORO, Ky., Aug. 18.—I am forced to make an unfavorable report on condition of the tobacco crop. During the past ten days the disease known as "Wildfire" has become very prevalent in the crop, which has been augmented by excessive rains during the week; and due to the rapidity of its spread it is very hurtful, rather forcing farmers to cut their tobacco green or lose it.

Thus at this time the outlook for really good, well-matured tobacco promises a much smaller percentage than it did ten days ago.—J. S. PHELON.

New Warehouse Company Organized

LEXINGTON, Ky., Aug. 17.—Articles of incorporation of the Independent Tobacco Warehouse Co., placing the capital stock at $60,000, were filed in the county clerk's office yesterday. The incorporators and officers are John L. Buckley, president; J. W. Rodes, vice-president; L. M. Land, treasurer, and C. E. Buckley, secretary. The stock is divided equally between the four officers.

Officers said yesterday that they would start the construction of a new modern warehouse immediately on the plot of ground on Virginia avenue, purchased recently from E. C. Franke, of Louisville, Ky.

All of the officers of the company are known in Lexington and central Kentucky as experienced tobacco men. Mr. Rodes and Mr. Land formerly were connected with the old Independent Tobacco Warehouse Co. at the intersection of South Upper and South Limestone Streets. C. E. Buckley was formerly of the firm of Geary & Buckley and John L. Buckley was formerly of Stone & Buckley, former owners of the Central and Planters' warehouses.

All of these men predict that, with favorable weather conditions for the remainder of the season, the 1923 crop of tobacco will not only be one of the largest but one of the best burley crops ever grown.

The Lexington tobacco market at one time enjoyed the distinction of being the largest loose leaf market in the world, having sold more than 75,000,000 pounds over its floors in one season.

The Lexington market last season sold about 15,000,000 pounds over its floors in the four independent warehouses. It is the consensus of opinion among authorities that more than 25,000,000 pounds of the 1922 crop will be sold this year.

The Lexington market has always had more buyers represented on its floors than any other burley market. Having not only the four largest companies, which are the R. J. Reynolds Tobacco Co., Liggett Myers Tobacco Co., American Tobacco Co., and the P. Lorrillard Co., but also the G. Frank Vaughn Tobacco Co., Lexington Leaf Tobacco Co., W. L. Petty Co., E. J. O'Brien Co., the Kentucky Redrying Co., and numerous brokers who supply manufacturers with their requirements.

Mr. Buckley stated that as the majority of farmers haul their tobacco and other products by motor trucks, the Lexington market, which is easily accessible to growers in the surrounding counties, in the not too distant future, will regain the distinction of being the largest looseleaf market in the world.

Robert L. Stivers, owner of the Virginia Avenue loose leaf warehouse, also anticipates a large delivery at Lexington this year of independent tobacco and is constructing an addition 70 by 200 feet to his warehouse. This gives Lexington six warehouses outside the tobacco pool for the present year's business.

Tobacco in New Section Has Promising Outlook

CLEVELAND, Tenn., Aug. 18.—The tobacco, the new money crop, which is to be developed in Bradley county, is looking fine. The growing of this important crop is in the experimental stage in this county, as there are few experienced tobacco growers here. The acreage this year has been increased about 200 per cent over last year. The average for each grower is estimated at about one and one-half acres. There is about 100 acres planted.

With the needed experience in cultivation and curing of the crop, tobacco is expected to become an important factor in the county, which has much land suitable for it.

This fall about fifty farmers will plant red clover on their land, which will be planted to tobacco in 1925. They will get a hay crop from the clover next year and follow this with tobacco. The farmers growing tobacco this year plan to plant crimson clover this fall, to be followed by tobacco in 1925. Clover sod is said to produce an excellent quality of tobacco.

Loudon County's Tobacco Crop

LENOIR CITY, Tenn., Aug. 18.—County Agent G. C. Baker, says:

"Loudon county's tobacco crop stands well in line with the crop in other adjoining counties and east Tennessee as well. The acreage shows a healthy increase and approximately totals about 250 acres. The condition of the crop is good with early set plants beginning the ripening stage. Most patches have been topped following topping demonstration held by the county agent all over the county. Some damage has been sustained from the bud worm, but the growers have cheerfully charged that to inexperience and will go after them right another year.

"Very little disease has shown itself in the county and we should consider ourselves fortunate and continue to select good pure, disease-proof seed.

"As a whole we have done exceptionally well with the crop this year and should feel encouraged enough so that we will prepare a place in our rotation for tobacco and also prepare a place to grow the crop in the future."

MOST GOOD MILD CIGARS

Contain Porto Rican Tobacco

At last Porto Rican Tobacco is being accorded its proper position by Cigar Makers and Smokers alike. No longer is it necessary for the Manufacturer of a good, mild Cigar to deceive the public by advertising it as a "Mild Havana."

Numerous publicity campaigns are helping to acquaint the Smoker with the fact that an all Porto Rican Cigar or one in which the Tobacco from that Island is blended with other tobacco, makes the ideal smoke—mild yet fragrant; free-burning and rich in body but not heavy. In fact, it is claimed that a Porto Rican Cigar can be partially smoked, relighted and finished the following day with practically the same satisfaction.

The Porto Rican Government

Has established in this country a Tobacco Guarantee Agency which is conducting an intensive educational campaign to both Manufacturer and Consumer.

Cigar Manufacturers can now tell the origin of Leaf or Scraps sold as Porto Rican by examining the Guarantee Stamp affixed to every barrel or bale.

WHITE: Guarantees it to be pure Porto Rican Tobacco.
BLUE: That it is only part Porto Rican Tobacco.
PINK: That it contains no Porto Rican Tobacco.

Pennsylvania Growers Expecting Highest Prices

Producers of Exceptionally Good Crops Look for Figures Above the 1922 High Mark, Despite Reluctance of Buyers—Inquiries for Old Tobaccos Exceed Sales.

LANCASTER, Pa., Aug. 20.—Growers who are so fortunate as to have an exceptionally good crop of tobacco this year are expecting prices which will top the high mark set last year, the unwillingness of the buyer to "come across" notwithstanding.

This fact was definitely established in a number of interviews with prominent growers during the past week. One of these was so extremely optimistic as to state that he would not sell under 26 cents a pound—four cents higher than was paid for the best crop of Pennsylvania grown in 1922. Other growers mentioned prices in the neighborhood of 20 to 22 cents per pound as their low mark.

An impartial view of the matter of price for the oncoming crop leads to the opinion that prices as high as those mentioned are very problematical, to say the least. It has been rumored that some of the "prize" crops have already been bought in the field at prices which did not go over the twenty cent mark. This has an illogical aspect since both grower and buyer are as yet pretty much in the dark as to which way the price will actually incline, even though they may be at variance in their prophecies.

Agree That Prices Not Equal 1922

Buyers for the large manufacturers and independents are as one in declaring that the price will fail to reach the level set in the 1922 purchases. Buying last season was done very early, much of the crop being contracted for on the field or in the curing shed. A recurrence of this circumstance may be forecast by the fact that tobacco fields all over the country are the scenes, at the present time, of daily visits from buyers from high to low degree. A rush of early buying, though not to be expected because of an actual shortage, may be looked for because of the fact that the very good crops are relatively few.

Crops Are Not Uniform

This season's crop of Pennsylvania, in the main, presents a variegated aspect. A large proportion of the cigar leaf is very good, but the remainder is very poor and stands a chance of reaching normal growth only if suitable weather conditions prevail during the next thirty days. Root-rot is blamed as the source of much of the trouble in the case of the very poor crops, while lack of rain is the limiting factor in sections which may yet produce some very good leaf.

Make Auto Tour of Inspection

More than one hundred growers, packers and other prominent tobacco men joined in the thirty-first annual tour held by the Lancaster County Tobacco Growers' Association today. Six tobacco fields in representative sections of the county were visited in the course of the run which terminated at the Federal Experimental Station at Ephrata. Following the inspection of the crop by the growers a meeting was held at which Frank P. Willits, Secretary of the Pennsylvania Department of Agriculture, and a number of well known growers and packers were speakers.

The finest field of tobacco visited by the tobacco men was that of Elmer W. Strickler, near Mt. Joy. This leaf is all that could be desired in the matter of growth, texture and color, and is representative of a number of crops which have received the treatment proper for successful growth this year. It was estimated by veteran growers who carefully examined this tobacco that the crop would average well over a ton of cigar leaf to the acre.

Farm Bureau Recommendations Vindicated

Complete vindication for the several Farm Bureau recommendations which were urged upon growers this season was found in the crop of Jacob Lindeman, near Washingtonboro. Lindeman used the 5-8-5 "Tobacco Special" fertilizer which was specially prepared for Lancaster County growers by the Farm Bureau; he planted the Hibshman strain of seed which was recommended as resistant to root-rot and productive of a bigger, heavier crop of tobacco; he had followed all of the suggestions made by the Lancaster County Farm Bureau in regard to the preparation of the seed bed; and he had as fine a crop of tobacco as could be found in his neighborhood, which was particularly hard hit by poor growing weather this year. Lindeman also practices to some extent the methods of the Connecticut growers who specialize in tobacco. He has had his tobacco field in no other crop for more than thirty years, and seems to disprove the general belief that the rotational system is what has earned the Lancaster County farmer his reputation as a tobacco grower.

Visit Experiment Station

The visit to the Experimental Station at Ephrata was made very interesting by the number of tests which have been run by Otto Olson, Federal Tobacco Expert, who explained the work of developing new strains and new methods of culture to the growers.

Sales Not Equal to Inquiries

Very few exchanges of leaf are reported from Lancaster's tobacco "rialto." Interest runs highest in the low grade goods of the 1921 and 1922 crops, although the number of inquiries and requests for samples far exceed the sales.

More business has been done in warehouses recently than in tobacco. The I. H. Weaver Co. and L. H. Nolt & Co. have both made extensive changes in their warehousing with an increase in capacity for both firms. Milton Ranck figures in the transactions, and he also has greatly added to his facilities.

Ranck Buys Nolt Warehouse

The large L. H. Nolt warehouse on North Prince street, Lancaster, was sold to Milton Ranck, who will use it in conjunction with his present plant on North Duke street. Mr. Nolt has transferred his business to his Rohrerstown warehouse, which has been in operation for some time. An addition to the Rohrerstown building will be built at once and, when completed, will give Mr. Nolt a total capacity of about 6,000 cases with ample sweating facilities.

The I. H. Weaver Co. has purchased a warehouse at the corner of Marshall and Marion streets, Lancaster, which will serve as an auxiliary storage. The new building has good sweating facilities and will add considerably to this concern's present capacity. The I. H. Weaver Co. also operates a warehouse at Strasburg, where all of the leaf bought in that section is packed.—KEYSTONE.

To Hit the Western Trail

D. Dreux, head of D. Dreux, Inc., leaves New York tomorrow, Friday, for a long tour of the Middle West, during which he intends to visit all the principal centers.

York County News

York, Pa., Aug. 20.—"After All Nothing Satisfies Like a Good Cigar" was the slogan adopted by the York County Cigar Manufacturers' Association at a meeting held August 13, at Red Lion. There was a good attendance of members and the cigar business in general was discussed by C. S. LaMotte, T. E. Brooks, C. M. Ehehalt, J. C. Winter, T. L. Adair and Charles F. Laucks. At the July meeting it was decided to launch an advertising campaign for the education of the public to the fact that a short filler cigar retailing at five cents is better quality than a long filler cigar selling at the same price. J. C. Winter, of the J. C. Winter Cigar Co., offered a prize of $10 for the best letter to be used for mailing to all cigar jobbers in the country. These letters were submitted and turned over to a committee composed of Arthur S. Zeigler, C. M. Ehehalt and Robert E. Glenn. The committee will report the winner at the next meeting. Because of the absence of the president, B. M. Hannigan, the meeting was in charge of Perry A. Tschopp, vice-president. The members in attendance were: C. S. LaMotte, Robert E. Glenn, Perry A. Tschopp, Stewart F. LaMotte, Herbert M. Smith, C. M. Ehehalt, Arthur S. Zeigler, Arthur H. Thompson, Allen C. Frey, Perry Minnich, Charles C. Meads, Clair Sentz, Roy Snyder, Stewart S. Shindler, W. H. Snyder, T. E. Brooks, Daniel Spangler, Latimer Sechrist, Paul Reichard, Lemuel Sentz, Horace E. Rost, M. S. Downs, Charles F. Laucks, W. H. Myers, Titus A. Smith, Clarence Zarfos, J. C. Winter and T. L. Adair.

Trade Notes

A. Scott Frey, cigar manufacturer of Red Lion, has returned from a business trip through the South.

Perry L. Tschopp, manager of the Eisenlohr cigar factory, Dallastown, has moved from Windsor into his new home in Red Lion.

The East Prospect Cigar Co. branch factory in Wrightsville, which had been closed for two weeks, resumed operations in full on August 14.

A New Venture

The newly organized Keystone Cigar Co., promoted by Sol Rosenbaum and Joe Shube, both of whom were connected with Bobrow Bros. factories, began operations on August 13 in the brick building, rear of 331 South Duke street.

Inspect Minnesota Tobacco

St. Cloud, Minn., Aug. 18.—The annual field inspection trip of the Minnesota Tobacco Growers' Association was held Sunday afternoon at Richmond. A crowd of about 150 people formed an automobile procession which went from one tobacco field to another and inspected the different fields at Pearl Lake, St. Nicholas and Richmond.

The tobacco crop is about ready to be harvested. It is a beautiful and bounteous crop, the growers say.

E. A. Jefferson of the Jefferson Tobacco Co., Sparta, Wis., was present at the gathering and offered the growers a price ranging from 14 to 17 cents a pound for their crop. Although this is a very good offer it was refused by the growers. At the price Mr. Jefferson offered the growers would receive a return of from $200 to $250 an acre, which at a production price of about $50 an acre would provide a profit better than any other farm crop grown in this vicinity.

Georgia Tobacco Sales Tax

Atlanta, Ga., Aug. 18.—Governor Walker on Tuesday signed the Milner tobacco sales bill, it was announced at the executive offices. The bill, which levies a 10 per cent tax on the price of cigars and cigarettes, is expected to raise $1,500,000 annually. The Alto tubercular sanitarium, under provision of the measure, is to receive $250,000 during each of the years 1924 and 1925. All revenues derived from the measure above the Alto appropriation will be devoted to the payment of Confederate veterans' pensions.

New England Trade Normal

B. Meister, of Arthur Bornholdt & Co., 139 Front street, is at present covering the New England territory. Mr. Meister declares that business is looking up again, now that the cigarmakers' strike has terminated.

Inspects Connecticut Crops

Leopold Holzman, of Strouse & Holzman, is in Connecticut this week, inspecting the wonderful shade-grown and broadleaf crops.

Inspects Local Market

Louis King, of the Bellair Cigar Co., of Hartford, Conn., is in town this week, inspecting the offerings in the local leaf market.

Philadelphia Hoping for Larger Output Shortly

End of Vacation Period Will Be Welcomed By Producers and Distributors—More Goods Desired—Demand for Cigars Shows Marked Increase—Leaf Sales Show More Speed.

PHILADELPHIA, Aug. 21.—End of the vacation season will be more welcome this year than it has been at any time since the artificial stimulus of the war period by the big producers, because it will mean an increase of production so much desired by all. The extra buying for the vacation period has been supplemented by the extra consumption following restoration of earning power to those who spend summer days in brief, or continued idleness. The week brought out a particularly marked increase in demand in the vast anthracite coal region of Pennsylvania, and a lesser one, but still a gain, from the big textile district in the northeastern section of the city. But, the middle and far west and the nearby south, still hold the buying championships. The Jersey Coast market has declined, of course, but while this was in itself large, comparatively it was only an incidental feature.

Counter Sales Improving

Retailers in the city enjoyed some betterment but not a very decided one. The returning tourists of the summer days are bringing more activity in counter sales. Though their purchases show some tendency to larger average, they are far from what was expected. The vogue is for single cigars, of the higher grade, rather than for several of cheaper price, but, paradoxical enough, box sales of lower price goods are more prevalent than higher priced.

Sales of leaf are gathering momentum. The market shows awakening from the dullness which prevailed some weeks ago. All indications point to a higher market for the coming fall because of the better quality of the incoming crops. Dealers in Sumatra and Porto Ricos are enjoying a livelier interest on the part of buyers because of the improved sentiment among the manufacturers. Inquiries are now developing into more sales and though buying still shows some caution the dealers are looking forward to larger orders before the month wanes. Prices of Sumatra and Porto Ricos are higher than last year at this time, and there is every evidence that when the active trade season is under way there will be a substantial advance. Pennsylvania and other leaf stocks are moving quite satisfactorily.

An evidence of the optimistic outlook for the cigar manufacturers is to be found in the month's survey for July, just completed for employment in all industries in this city by the Industrial Relation Committee of the Philadelphia Chamber of Commerce. Among the four basic industries which showed a marked improvement was that of the tobacco and cigar manufacturing business. It stood second in the list of gaining trades, with a 14.6 per cent increase; its only rival in the lead being the chemical industry with its average of 18.1.

A petition has been filed by Bayuk Brothers, Inc., Third and Spruce Sts., for dissolution of the corporation. The Court in complying with the petition has set Tuesday, September 4, as the time for the hearing of the application to be held in Common Pleas Court, No. 3, Room E., 275 City Hall, when all persons interested will be given an opportunity for filing any objections to the dissolving of the corporation. The petition follows the usual routine necessary for the nominal reorganization preparatory to the formalities of changing the name of the corporation to that of Bayuk Cigars, Inc. While a new charter has been issued for the incorporation of Bayuk Cigars, Inc., effective as of August 1, there has been no change in the personnel of the corporate officers. They are, president, Samuel Bayuk; vice-presidents, Louis A. Kramer and Harvey L. Hirst, the latter being also secretary, and treasurer, Meyer Bayuk. The object of the change in name was to give a definite knowledge of the business in which the corporation is engaged through the title. Bayuk Brothers' factories are running to full capacity in order to catch up on the concern's leading brands, Havana Ribbons and Prince Hamlet.

President Benjamin Lichty of Otto Eisenlohr & Bro., 932 Market St., is visiting the southern distributors of Cinco cigars. Mr. Lichty will spend some time in the territory. The Donovan-Armstrong Co., advertising agency has been appointed to look after the national advertising of the Eisenlohr products, and will from its headquarters in the Reyburn-Bailey Building at 12th and Chestnut Sts., conduct an intensive campaign.

A shortage of almost 2,000,000 of the new Invincible shape of the 44 Cigar is reported by the 44 Cigar Sales Corp. Division of the Consolidated Cigar Corp., 11th and Wharton Sts. The shortage is occasioned by the tremendous demand that has taken place through the issuance of this new large size smoker of the 44 family which made its appearance on the market just a few months ago, and for which there has been conducted under the supervision of Sale Manager L. I. Levenson, an intensive advertising campaign. The shortage is expected to be alleviated when the many hands now on vacation from the factories return to work. All the factories in Philadelphia are running full capacity in order to catch up on the orders, mostly centered in the city proper where the central cigar stores have been featuring the Invincible and where the Philadelphia patronage has taken strong hold. A new poster for the latest 44 addition has been issued for window advertising purposes and is being distributed this week for the first time. The trade learned with regret of the automobile accident which resulted in the injury of vice-president I. Sager of the 44 Cigar Sales Corp. The accident occurred while Mr. Sager was riding on a West Philadelphia street car when a heavy automobile truck struck the car, throwing him to the side of the car and breaking his ribs. He was taken to the Misericordia Hospital where he remained three weeks. Mr. Sager was discharged from the hospital last week and returned to his desk.

B. Podolnick, representing the Progressive Cigar Corp., 1201 Race St., is now in Baltimore working with J. F. Obrecht of that city in a missionary way for the sales of Madam Butterfly. The 5 weeks' drive now under way is being backed up with extensive newspaper advertising, both in the Baltimore district and in the Philadelphia territory.

After a three weeks' trip through the Middle West, Leo S. Weiss, of the Roig & Langsdorf sales organization has just returned to headquarters at 315 N. 7th St. with a prosperous order book for Girards.

P. C. Fulweiler & Bro., 927 Sansom St., have found a fertile field for sales of Ivanhoe, the latest of the Fulweiler brands in the Atlantic City stores. The Ivanhoe is being distributed through the Lambach Cigar Co. and concentration of sales on this smoke has been productive of a greater success than anticipated in the seashore resort.

An increased force of cigarmakers has been engaged by the F. C. Sheible Co., in the factory at 2331 North 8th St. The enlarged sales of the firm's own brand

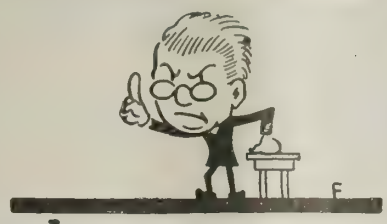
Tobacco Smoke as a Germicide

A series of elaborate experiments to determine the disinfective action of tobacco smoke under conditions comparable with those of the human mouth and throat, were recently conducted by an Italian investigator, Signor V. Puntoni. He first endeavored to determine the effect of tobacco smoke on the most common microbes, using impregnated "tests" of bacterial emulsions placed in a small glass box. The bacteria employed included those of meningitis, cholera, typhoid fever, and diphtheria, as well as the staphylococcus, the streptococcus, and Pfeiffer's bacillus. These varied in resistance, but all were killed in five to thirty minutes.

In order to identify its ingredients, the tobacco smoke was filtered through cotton wool to remove those substances which make it opaque, and the products contained in the wash water were then separated by distillation. The different qualities of tobacco examined, including cigars, cigarettes and pipe tobacco, showed a power of disinfection about equal for the same weight. Cigars, which are composed of denicotinized tobacco, were as strongly disinfectant as ordinary cigars.

The filtered smoke (rendered transparent by filtering through comprest cotton) was found to retain a marked bactericidal action, although the process of filtration had entirely removed the nicotine. The bactericidal substances contained in the filtered smoke are soluble in water; one of these is formaldehyde, which distills over at 100 deg. cent. Another constituent possessing a very considerable degree of germicidal power is pyrrol, which distills over at a higher degree.



Unfortunately, the disinfectant action is less powerful in the smoker's mouth than in the test-tube. Signor Puntoni's experiments in this direction led him to conclude that at most there is a comparatively mild germicidal effect produced after one has smoked a very large amount of tobacco. Moreover, this applies only to the less resistant germs, such as those of cholera and meningitis. Those microbes having a resistance equal to that of the typhoid bacillus, or greater, can not be destroyed by tobacco smoke. He also regards it as a grave mistake to suppose that the germicidal action of the smoke manifests itself in the respiratory passages as a result of inhaling the smoke.

Voyagers Return Refreshed

Isaac Meyer, head of Isaac Meyer & Co., and Mrs. Meyer, have returned to New York from their long European tour, greatly benefited by the change of climate and their interesting experiences.

A Lancaster Visitor

Leroy Nolt, of L. H. Nolt & Co., leaf tobacco packers, of Lancaster, Pa., was among the prominent visitors to the New York market last week.

Mr. Cigar Manufacturer, are you keeping tabs on your supply of cigar boxes? If Contemplating a larger output, why not place your order now for our quality cigar boxes?

Cigar Companies Increase Volume of Business

Cigar companies generally are doing a larger volume of business this year compared with a year ago. While the gains in sales so far this year have not been reflected in corresponding increased net, as disclosed by reports of several companies so far, it is expected that larger volume of business which comes during the summer and fall months will be reflected to a greater extent in net. Cigar companies this year seem to be assured of at least as good a year as 1922, with the probability that some good improvement will be shown.

First and second quarter earnings cannot be pro-rated to show what can be expected for the full year. Usually, the first three months period is the poorest in the year, followed by moderate improvement in the second quarter, while the third quarter is the best.

Final three months is also a good one, showing some falling off as the holidays approach.

In connection with continuation of good earnings by the cigar companies, it is interesting to note that a bulletin of the New York Federal Reserve Bank, issued a short while ago, compiling earnings of representative industries for 1922, out of a group of 12 major industries, gave the tobacco industry an index number of 137, being exceeded only by public utility companies at 162, and class 1 railroads at 150. The number 100 represents the 1919 earnings.

Bayuk Cigars, Inc., for the first six months of this year showed earnings about the same as the corresponding period of a year ago. The six months' earnings statement to June 30, last, showed net earnings before depreciation of $592,113 before provision for Federal taxes. For the corresponding period of 1922, net, after taxes, amounted to $556,636. As taxes on 1922 earnings approximating those of this year amounted to $161,000, it is safe to assume that there was a slight falling off in net.

General Cigar Co., Inc., for six months ended June 30, last, showed increased sales at the rate of more than $500,000 annually, but final net shows only slight increase, due to larger interest charges on increased bank borrowings. A comparison of six-month statements to June 30, 1923 and 1922, follows:

	1923.	1922.
Gross earnings	$4,270,822	$3,861,477
Net, after taxes....	1,210,756	1,073,761
Interest on loans...	129,044	57,685
Earnings a share on common	$4.22	$3.80

Thus, while in the six-month period of 1922 only $3.80 a share was shown for the full 12 months, $10.43 was earned on the common. It is indicated that this year the company should be able to show at least $12 a share on the 181,040 shares of common stock, or twice dividend requirements. Increased interest charges this year can be attributed to the fact that balance sheet as of June 30, last, showed bills payable, exclusive of accounts payable, amounting to $7,500,000, compared with $2,500,000 a year ago.

Consolidated Cigar Corporation in the first quarter of this year showed net profits available for dividends of $154,961, equal to 57c. a share, on the 150,000 shares of common, compared with $112,545 for corresponding period of a year ago, equal to 22c. a share. Despite the small amount of earnings shown in the first quarter a year ago, Consolidated showed $4.77 a share for the full 12 months. Due in part to acquisition of new selling agencies, many of them in the New York Metropolitan district, second quarter earnings showed moderate improvement over those of a year ago. Interests in the company believe that better than $7 a share can be shown on the common this year, based on the half-year's known results. Last year the company, after dividends on the preferred stock, added $975,000 to surplus. There is no thought of any payment on the common stock at this time and none is likely this year. The aim of the management is to build up working capital from earnings and strengthen financial position.—*Daily Financial America.*

Tells of Chances

(*Continued from page 9*)

our displays more frequently than is the case with the majority of tobacco stores. Most stores change their window displays only every other week or so. But we change our displays twice a week. We do this because we notice that the majority of the men passing our show windows are 'regulars.' That is, they pass our store regularly every day or so. Consequently, after the first day of a new display on which these regulars see the display, the display hasn't much business-building force with them because it is the same old thing. So if we left the same display on view for two weeks, the display toward the end of this period would have hardly no business-building force at all because the great majority of all the men passing it would already have seen it, and, of course, wouldn't care to stop and look at it again.

"By changing our window displays twice a week we get constant freshness and variety into the displays and give them a real news value, all of which makes them four times as effective in building business, according to our opinion, than if we changed them only once in two weeks.

"We frequently hook up in our window displays with advertising campaigns which are being run in the newspapers or magazines by the makers of the brands of cigars and cigarettes we handle. For instance, we'll clip a full page ad of a cigarette from a magazine and paste it on cardboard and put it in our show window with this sort of a caption over it:

"'*Have you seen this ad?*'

"'It appears in this week's issue of the *Weekly Review*. We're showing it here because we carry these cigarettes regularly in stock.'

"On several occasions we have had our principal show window full of clippings of this sort—twenty or more—and in front of each clipping we've had a sample package of the brand of cigars or cigarettes advertised.

"These window displays have been unusual and have attracted a lot of attention and have helped business considerably.

"Also, we try to get as much local stuff—photos, placards telling about local events, etc.—into our show windows as possible. People are always more interested in local window displays, we find, than they are in the majority of other displays.

"Aren't there some suggestions in all this which can be used with profit by other retail tobacco merchants?

"Here's hoping so, at any rate."

Adopting Your Trade-Mark

(*Continued from page 7*)

guage requirement does not weigh heavily, although it is sometimes important, from the point of view of legal protection, to register the foreign equivalent of the trade-mark, together with the English word, even though the latter is used exclusively. In adopting a pictorial trade-mark, however, care must be taken that the illustration does not prove objectionable or offensive.

When a Trade-Mark Does Not Speak True

Not a few instances have occurred where the use of an unadapted American trade-mark has proved injurious in foreign trade because of its undesirable connotation in the language of the country of sale. The customs of countries dominated by western civilization are approximately parallel in their broad acceptance of certain ideas and traditions, and it rarely happens that a trade-mark in use here would be found unacceptable or offensive in trade with Latin America or Europe. In the markets of the Far East, however, a trade-mark must be selected with greater care and more minute consideration of colors, illustrations, and wording. This is especially true when a translation of the trade-mark into the language of the country is desired. Commercial Attaché Julien Arnold, at Peking, well illustrates this point in speaking of the selection of a Chinese trade-mark for "Sunmaid Raisins." He says:

Advertising in Chinese

"In adapting the trade-mark to Chinese trade it was found that the Chinese word for sun could not be used, since it is a part of the word for Japan. The Chinese characters for seedless raisins read 'Wu Tsz,' which, while they mean 'without seeds,' also mean 'without sons.' As every Chinese wishes to have sons, any product advertised as suggesting 'without sons' would be distinctly objectionable. Hence we were obliged to suggest the use of the expression 'without kernels.'

"This illustrates the necessity of exercising great care in the manner of advertising a product in Chinese for use in the Chinese market."

Customs Must be Studied

What is true of China is also true of Japan, India, Ceylon, the Netherlands East Indies, and other markets of the Orient, where selling must be adapted to the psychology and temper of a people of different civilization. A careful investigation of the customs peculiar to a prospective market will invariably reveal points of weakness in the advertising appeal of a trade-mark and will assist in determining the modifications which would make it most effective in the particular market.

It does not necessarily follow, however, that a different mark should be adopted for every individual country. Where countries are contiguous or closely related, as in the case of the Latin American republics, the same trade-mark is usually found effective throughout the entire group. Likewise in Europe an American trade-mark with slight modification will prove as valuable in distinguishing goods as in domestic trade. But in the Far East special attention to marking and advertising is indispensable, if the desired good will is to be created.

Simplicity and "Long Wear" Desirable

Too often in selecting a trade-mark manufacturers are inclined to devote their entire attention to features which will make it distinctive—or, to be more exact, "catchy"—losing sight of other essentials, such as simplicity and "long wear." A glance through the pages of the United States Official Gazette will reveal trade-marks designed either on an idea which dominates the public mind at the moment, or arranged in such an intricate manner that the first impression is not strong or lasting. Happily, such trade-marks are chiefly intended for only temporary use, and no heavy expenditure is made to establish them firmly through advertising.

It would, indeed, be disastrous if such trade-marks were adopted for foreign trade. For in its very nature foreign trade demands a relatively long period for building up and, therefore, all calculations must be gauged by the condition of time. A trade-mark used in foreign commerce must stand long wear. The world-wide fame of many prominent trade-marks testifies to the success achieved by first adopting a trade-mark universally acceptable and then pushing it consistently and energetically.

[This article is to form part of the introduction to a pamphlet on the conditions for obtaining trade-mark protection in the countries of Europe and their colonies, which the Division of Foreign Tariffs has under preparation, to be published shortly. American tobacco concerns interested in obtaining copies are invited to present their requests to that Division of the Department of Commerce.]

Canadian Sales Tax

(*Continued from page 11*)

"We cannot stress too strongly the fact that in this industry of all others, the machinery is already to hand to provide for an exception. This machinery—the Government control—will expedite collection for the Government and simplify the entire provision of the Act as well as grant to the manufacturer relief in work and relief in financing and unnecessary handicaps.

"Further facts can be presented for your consideration if desired, but we are relying on your sense of justice and equality to grant this request."

Kentucky

(*Continued from page 15*)

ones and they were very numerous. Paris green is a much more readly poison than arsenate of lead, and for this reason it has been used largely in the emergency, although the danger from injuring the plant if it is used too strong is great. The arsenate of lead has been popular too, and sometimes the two poisons have been mixed together. The dusting of the powder on the plants used to be a very arduous and disagreeable task, and even now it is not one that appeals very strongly, but with the machines or "guns" that spray the powder out rapidly and so as to cover large space, the work is made much easier and is done in far less time than by the old hand method. Some growers who have small crops, still stick to the old method of picking the worms off by hand and killing them.

Suckers Grow Fast

The rains have made the suckers grow unusually fast, and the plants too need frequent topping and the farmer and his crew have been kept busy with this. Many reports are being made that plants often lose their leaves, especially the heavy bottom leaves, after suckers have been pulled off. Usually this is due to a rotting of the leaf stem just where it joins the stalk. Also this usually happens when a rain has closely followed the pulling of the suckers. Hence, it is thought the rain falling on the freshly exposed surface, is responsible for the rotting.

More Burley Grown in District

There is a largely increased acreage of burley being grown in this county this year. Possibly two hundred acres are planted to it, which is a big increase. Until a year or two ago no burley was grown here at all. But last year a few farmers experimented with it and their returns were so good that others took it up. One or two farmers, who grow tobacco on a large scale, have planted nothing but burley this year. One of these is D. L. Van Cleve. He began cutting his crop the past week.

Must Deliver Burley

Farmers who are growing burley tobacco have been notified that if they are members of the Dark Tobacco Growers Co-operative Association, that they must also deliver their burley to that organization. They are told that their contract pledges all varieties of tobacco to the association.—M. E. BACON.

A SHORT HISTORY OF MANILA CIGARS

with Special Reference to the "ISABELA" Factory

THE Compañia General de Tabacos de Filipinas had its inception in the year 1881, the year of its organization. In 1883 the Spanish Government relinquished the Tobacco Monopoly which it had held, and the Compañia General de Tabacos de Filipinas was the first private organization to engage in the tobacco industry. Starting in this manner, as pioneers in the development of Philippine industry, particularly that of tobacco, the exceptional advantages they enjoyed through being the first in the field has enabled them to develop until they have become a dominating power in the islands.

Besides engaging in the tobacco and cigar making industry, the Compañia General de Tabacos de Filipinas carries on an extensive business in all Philippine products, such as copra, cocoanut oil, hemp, rice and sugar. They are the owners of the Central Azucarera de Bais, located on the island of Bais, one of the largest and most up to date sugar centrals in the Philippines. They also own their own cocoanut oil mills in Manila. The Company has agencies in every town of importance and throughout all the provinces of the Philippine Islands, which, coupled with the fact that they own their own line of inter-island steamers, gives them facilities for carrying on their business which are unequalled.

The properties owned by the Compañia General de Tabacos de Filipinas in the most accessible parts of the various islands, comprise some 120,000 acres, in the development of which they furnish employment to over 20,000 men.

The "ISABELA" factory, property of the Compañia General de Tabacos de Filipinas, is unique among Manila cigar factories. The factory is located on high ground about a mile from the center of the city. It stands in an extensive piece of ground, which might well be called a park, on account of the gardens, with their orange and lemon trees and many other kinds of shrubbery surrounding the factory on all sides. The various rooms where the workers manufacture cigars are exceedingly large and spacious, clean and well aired. The strict government regulations as to the cleanliness and sanitation of the factory, are augmented by an even stricter vigilance on the part of the company itself. Every cigar maker is compelled to wash thoroughly before entering the factory, once again at noon when leaving and again when resuming work in the afternoon. Washrooms provided for this purpose are the peer of anything of the sort in the United States. A good many women are employed, especially in the cigarette manufacturing end, and many of them bring their small children, which are taken care of in a school maintained by the factory, and where even the smallest children are cared for just as they would be at home.

The factory is somewhat of a show place in the city of Manila, and visiting tourists are always shown to this factory as being the largest and most complete factory in the Philippine Islands. An idea of the size of the plant may be gained from the fact that 3,500 cigar makers alone are employed. This does not include the large numbers employed in other departments of the factory, in the stripping rooms, curing rooms, warehouses, and packing rooms.

Now a word as to QUALITY of "ISABELA" cigars. The fact that during the thirteen years since Manila cigars were first admitted duty free to the United States, the "ISABELA" Factory has not lost a customer in this country, is the best demonstration of the excellence of the goods they manufacture. In the Philippine Islands all grades of tobacco are grown from the very finest to the very poorest, just as happens to be the case in the United States. When these cigars first came to America, it was quickly demonstrated that only Manila cigars of high merit could hope to obtain a lasting market over here. Therefore, the Insular Government issued an order compelling manufacturers to make all cigars for the American market from leaf grown in the Cagayan Valley only, because in that Valley the best leaf grown in the Islands is reproduced. This valley is long and somewhat narrow and is divided into two provinces: the Cagayan Province, which is nearest to the ocean, and the "ISABELA" Province, farther inland, surrounded by mountains. The leaf grown in both Provinces is, as already stated, the best in the Islands, and when harvested, the tobacco in both Provinces looks alike and tastes alike. However, owing to the salt ocean breezes which reach the Cagayan Province, the leaf grown there after a few months shows the effect of this. Therefore, the cream of the leaf tobacco is grown in the distant inland "ISABELA" Province. The "ISABELA" Factory has three very large tobacco plantations of its own in "ISABELA" Province. In addition the "ISABELA" Factory buys about 60% of all the tobacco grown in the Cagayan Valley. Tobacco growing in the Philippine Islands has not yet reached the perfection obtained in America. Therefore, every little producer has among his ten or twenty or fifty bales various grades of tobacco as far as QUALITY is concerned. If a buyer were to select the cream of his crop and offer him five times the price for that cream than he ordinarily would ask for all of his crop, he would refuse to sell because he wants to sell all or nothing. You can readily understand from this that a cigar manufacturer in Manila would require a very large capital to buy in this manner, because he would have to take large quantities of tobacco unsuitable for QUALITY cigars, and for which leaf he would not have a ready outlet. The "ISABELA" Factory can do this for the following reasons:—

They furnish the various Government monopolies in Europe with their requirements of leaf tobacco. To the Spanish Government they sell all their requirements and to the French and Italian Governments about 50% of their requirements. These Government monopolies do not want expensive leaf tobacco because in those countries the smoker is compelled to accept what the Government offers him or stop smoking. Therefore, those Governments look primarily for cheap or medium priced tobacco. This gives the "ISABELA" Factory a ready outlet for the inferior tobacco and enables them to retain for their factory in Manila the very cream of the finest tobacco leaf grown in the Islands. This is the reason why after thirteen years of effort on the part of the factory, and of experience on the part of our customers in this country, the "ISABELA" brand stands in a class by itself, and is today stocked by our customers just the same as they stock domestic high grade brands.

Some Manila cigar manufacturers who have not been getting what they consider their share of American business, have appealed to the Philippine Supreme Court for the abrogation of the Government rule compelling them to ship to America only hand-made, long filler cigars, and to use only leaf grown in the Cagayan Valley for their cigars to be shipped to the American market. The Supreme Court sustained their petition and now they are allowed to use any tobacco grown in the Philippine Islands for cigar making purposes to be shipped to America or elsewhere. They are also allowed now to ship machine-made short-filler cigars. This, undoubtedly, accounts for some of the low prices and large sizes offered the American trade at the present time.

The "ISABELA" Factory and two other factories voiced the strongest possible objections to abrogating the rule for making Philippine cigars of the best leaf tobacco only, and preventing shipment of machine-made, short-filler cigars. They called the attention of the authorities to the fact that it would be most detrimental to the Philippine Tobacco Industry to have the QUALITY lowered or to have the restrictions changed in any manner whatsoever.

All "ISABELA" cigars are manufactured now, and will continue to be manufactured in the future, as in the past, from the choicest leaf grown in the "ISABELA" Province. Therefore, our friends and customers in America can assure their customers in turn, that they will continue to receive nothing but the finest product possible to be made in the Philippine Islands.

In the past, the American trade was strongly of the opinion that all Manila cigars were alike. Thirteen years of experience, however, have demonstrated that there is just as great a difference in the QUALITY of different Manila cigars as there is in the QUALITY of domestic brands. We cannot impress upon you too strongly the factor of QUALITY. If you are interested in price only, then you do not want to handle "ISABELAS." But, if you desire to handle a brand of Manila cigars which during the last thirteen years has proven its value, and on which you can build up an absolute sure business, then you must handle "ISABELA" cigars.

One more word about QUALITY. No two years' crops of leaf turns out to be the same. The change is so great, for instance, that in 1917 we had one of the poorest crops in the history of the Islands, and in 1918 the best crop in twenty-five years. To the "ISABELA" Factory the question of QUALITY of any particular crop is not of great moment, because they always have on hand a goodly quantity of at least five different crops. Therefore, they are at all times enabled to make a blend which is the same year in and year out, irrespective of what any particular crop might have been. The fact that after thirteen years' experience we still retain the cream of the trade in the United States, shows clearly the high favor in which "ISABELA" cigars are held by the smoking public of this country.

Start and Progress of the Tobacco Growing Industry in Insulinde

Sumatra and Java Greatest Tobacco Producing Islands in East Indian Group — Provide Vast Intrinsic Wealth for Dutch companies — Various Contenders Have Filled History of the Islands with Many Checkered and Interesting Incidents.

By DR. ARTHUR SELWYN BROWN

THE DUTCH like to call their East Indian colonies by the group name of Insulinde or Islands of India. These islands comprise, as is generally known, the splendid tropical commercial lands known as Java, Borneo, Sumatra, te Celebes and numerous smaller islands which irm a connecting link between Asia and Aus-talia. The total area of the Dutch possessions i the East Indies is about 740,000 square miles. These islands possess great intrinsic wealth, ad their splendid geographical locations will sme day cause them to become great centers commerce. Today, they are celebrated for a mparatively few products of which sugar, to-lcco, tin, tea, vegetable oils, copra, rubber and troleum are the best known.

The political history of these fine islands has len very checkered, and the Dutch do not ap-jar to consider themselves the ultimate own-s. For this reason they do not vigorously josecute their industries there; but allow them t develop haphazardly. Their attention is ciefly given to the cane sugar and tobacco indus-ties, because they are able to dominate the luropean markets with the products of these idustries. To the general public, the East ldies are chiefly known as the islands which foduce the excellent Sumatra cigar wrappers; ht commercial men realize that the cane sugar cops are the most important of the islands' joducts.

Richest of Holland Colonies

The East Indies are the richest and most im-jrtant of Holland's colonies. Their history ad development form one of the most romantic tories of the East.

The innumerable islands which stretch over te Pacific between the coasts of Asia and Aus-talia have been over-run by Asiatic conquerers nce the remotest times. These have all left records of their presence by monuments, ruins of old cities and palaces or temples, or in the traits and features of some of the existing native races. The Mongolian and Chinese invaders developed commerce in the islands, and for many years before modern Europeans visited the islands the Chinese appear to have cultivated crops of local native tobaccos for exportation to Asiatic markets. Possibly there were much earlier exportations to Australia and America, as it is believed that the present islands mark the high peaks of mountains of a submerged land which formerly connected Australia with southern Asia and South America. Our Virginian and other native American tobacco may have come in this way from Asia.

Sought Riches on Seas

The Dutch, after the wars of liberation, urged by economic pressure, decided to seek riches on the seas and sent ships to all known trading centers. The Spaniards, British, Portuguese, and to a lesser degree the French, were developing a rich commerce in the Orient. The Dutch Government sent agents to England, Spain and France to learn the secrets of these trading ventures. In 1595, the Government of the Netherlands decided to send a fleet to India on a naval and trading mission. The commander was ordered to seize any country he could secure or to fill his ships with Oriental produce and wealth. Another fleet, numbering twenty-two ships, was sent out, in 1598, on a similar mission by an association of Dutch shipowners and merchants.

Some Vessels Were Successful

Some of these vessels suceeded in making the voyage and returning with valuable cargoes. Between 1595 and 1602, sixty-five ships succeeded in making the round voyage successfully. The large profits made by the successful ships led to the sending of many other ships to the Orient and a disorganization of the markets by competition. These late ships, which escaped the privateers and other menaces of the seas at that time, found the European markets so low that the voyages resulted in losses. In 1602, therefore, the state of Holland passed a law causing Dutch traders with the Orient to organize themselves into a single corporation for mutual advantages. This organization eventually became the famous Dutch East Indies Company, which secured, held and ruled the Dutch East Indies for nearly two hundred years. A strange feature of the charter of this company was that the merchants who were original members were the only members, and they had great monopolistic privileges conferred on them. Naturally, they became very wealthy and formed a new caste in Holland which has ever since dominated Dutch trade in home and foreign fields.

Various Companies Competed for Trade

The British East Indies companies, the Spaniards and Portuguese were trading in the East Indies long before the Dutch. But these compenies held great trading monopolies in China, India, Persia, Africa and the Straits Settlements also. The Dutch found the Spice Islands and Molucca less well guarded than the other islands and settled these.

A Governor General was appointed in 1609, in order that Dutch trade might be properly organized in the Orient and extended as opportunities occurred. Bantam, at the western end of Java, then under jurisdiction of the Portuguese, was the site the Governor General chose as his capital. But he was chased away by Portuguese ships and located at Jocatva, east of Bantam. Batavia was founded in this territory.

The Dutch occupation of the islands was threatened many times by the British, Spaniards

Various views typifying features of numerous Sumatra and Java tobacco plantations: Upper left hand corner, performing acrobatic stunts in a drying shed. Next below, a modern barbershop with the tonsorial artist in action. The chap with the trumpet evidently believes in the adage: "He who tooteth not his own, his horn shall not be tooted"; he is sounding the praises of Sumatra and Java tobaccos, and incidentally calling the laborers to refreshments. The other scenes are equally interesting, and are self-explanatory.

and Portuguese. These, however, had greater and much richer possessions to defend in the Orient, and never sent a superior fleet to meet the Dutch, who were eventually permitted to remain in the islands.

Population and Types of Inhabitants

The population of the islands, now consisting of Java, Sumatra, a part of Borneo, Madura, Celebes, Molucca and the Sunda group of islands, is estimated at 40,000,000. The whites number about 80,000. Of these, 71,000 are recorded as of Dutch origin. The Chinese population numbers a little over 800,000. Arabs, Armenians, Persians and other Asiatic whites number about 40,000. Large numbers of Japanese coolies have been imported to work on the plantations. These peoples are densely settled on islands aggregating about 736,815 square miles.

Development of the Tobacco Industry

The early traders dealt in spices, pearls and aromatic oils, chiefly. Only the Chinese were interested in tobacco culture in the early Dutch settlement days. It was not until comparatively recently, in 1864, that a Dutch farmer in Sumatra named Nienhuys imported some good Cuban tobacco seed from Havana, and discovered that the plants he raised from it yielded a good tobacco suited for cigar-making. This accidental discovery changed the whole outlook of the Dutch in the East Indies. They quickly developed tobacco growing and built up a tobacco monopoly in Holland. The sugar industry, which was based on the chief crop in the islands, fluctuated violently with the European sugar market prices. But the tobacco industry was as stable as gold mining, and in time proved as profitable. The discovery of Nienhuys has proved itself the greatest gift bestowed upon Holland by any of its commercial men.

The success of the tobacco crops led to experiments with other tropical plants, and the planters soon launched out into tea, coffee, cocoa, cocoanut, rubber, rice, sago and other crops which are now extensively grown and largely add to the wealth of Holland every year.

Principal Tobacco Provinces

The principal European tobacco crops are raised on the northeastern coast of Sumatra and in Java. The Sumatra plantations are situated in the provinces of Deli, Langkat, Serdang, Padang, Bedgei and in adjoining territories. The principal qualities of the tobacco grown in the famous strip of territory are due to the characteristics of the soil, which is a sandy loam, like the fine tobacco soils of Virginia and Kentucky, and to the climatic conditions of the islands.

Difficult to Keep Competent Laborers

Chinese labor is used in planting and harvesting the tobacco crops. Javanese, Klings, Japs, Bataks, Bandparese and other natives are employed in industries connected with those of tobacco culture. The Chinaman has proved himself an expert in tobacco culture, owing, perhaps, to his general gardening skill, and his long experience in tobacco growing and manufacturing. The planters, however, have met with the usual experiences in dealing with Asiatic coolie labor, and some years ago were compelled to organize the Planter's Association to regulate the importation and discharging of coolie laborers. When the Chinamen accumulate a little money, their trading instincts prompt them to leave laboring in the fields to newcomers and to begin trading in a small way. There is, consequently, a continuous labor movement in progress through the settlement of thrifty laborers on the land and in the trading centers in the islands and the importation of new laborers from China.

The areas devoted to the growing of tobacco crops are usually divided into eight equal parts. The first part is cropped, then the second, and so on each year until in the eighth year the eighth is cropped. In the meantime the earlier portions are allowed to grow weeds or other fertilizing crops. Then the land is again cropped with tobacco in the same rotation.

The Sumatra tobacco plants grow most luxuriantly and attain unusual heights. They are subjected to the attacks of many insect and fungoid pests which cause daily attention to be given to all the plants. Cultural and harvesting are done on similar lines to the practice in America. In the Indies, however, women are largely employed to carry the harvested leaves to the curing barns.

Harvesting Methods Vary

The treatment of the plants varies in the different islands because of local conditions. The Deli plants are stripped when ripened and hung in the drying sheds. This is done by piercing the top center vein with a brass needle and sewing it back to back with another leaf until a bunch of about forty pairs is formed. The bunch is then tied up and slung on a pole to dry. About three weeks are consumed in drying, and the leaves lose about two-thirds of their green weight.

In the Fermentation Sheds

The dried leaves are made into larger bundles and carried to the fermentation sheds, where they are piled in heaps to sweat. The fermentation causes a further loss of from 5 to 10 per cent in weight of leaf. Between forty and sixty days are occupied by the fermentation processes. The tobacco is then sorted. Naturally, the climatic conditions being different to those in Europe and America, the fermentation of East Indian tobaccos calls for peculiar local experience. The general principles of the fermentation are similar to those pursued in the United States; but they are modified to meet the requirements of the warmer and more humid climate of the tropics.

The Grading

The tobacco is sorted at Deli with respect to color and fineness into twenty-one different classes which are marked as follows: D = black or dark brown, B = brown, LB = light brown, L = yellow, SL = light yellow, SSS = brown carrying many spots, etc.

The sorted leaves are made up into bundles acording to the length of leaf, thirty or forty bundles making a "fine bundle." These fine bundles are taken to a receiving room and again examined for length and color. The leaves are made into "fine bundle heaps." Later they are bundled in presses to bales weighing between 80 and 100 kilograms.

The Aroma of Sumatra

The Sumatra wrapper is distinguished by its color, fineness and aroma. Many authorities believe that Sumatra tobacco has no aroma. That is a mistaken idea. Practically all aromatic plants grown in the tropics retain their aromas after being dried. The aroma of Sumatra tobacco is finer than that of Havana leaf.

The leaf, after baling, is marked with a variety of signs. These include the tare, the name of the plantation upon which it was grown, the company's mark and marks showing the quality and other characteristics of the tobacco. The bales are then ready for shipment to the markets in Holland.

Java Tobacco

Tobacco growing conditions are different in Java because of local peculiarities of soil and climate. The Java leaf differs, consequently, in the same degree from the Sumatra leaf in aroma, fineness and color. These differences are as marked in some years' crops as those which may be noticed on comparing Connecticut leaf with that grown in Kentucky.

The area in which tobacco is grown in Java is called the Vorstenlanden, or the good lands of the principalities.

Tobacco crops were first raised in Java about 1856. In 1870, the exports to Europe amounted to 3,200 bales. They advanced to 239,867 bales in 1873 and 500,360 in 1911. Today Java exports over 800,000 bales. These figures show a slow, but steady increase in production. Little effort, however, is made by growers to increase their operations. Formerly they did not come into competition with the Sumatra leaf and produced only what the German and Scandinavian markets would take. These markets prefer Javanese tobacco for cigar making to any other.

Marking Java Tobacco

Java tobacco is branded on the plantations differently to Sumatra leaf. A, B and C represent respectively the first, second and third qualities. Z is a fourth grade of dark leaf. Thick leaf is packed separately and marked DB and DC for first and second grades respectively. Leaf marked E indicates that it was attacked by field mildew and is spotted. Other markings are A = dark brown, AA = brown, AAA = light brown, AV = dark faded, AAV = light faded, etc.

Cigar Industry Deranged by Post War Conditions

There is an important cigar making industry in Holland which is largely based upon the production of Java leaf. In Germany, Belgium, France, the Scandinavian countries, and Holland are markets supplied with cigars made from Java leaf. The war greatly disorganized this trade, and the present impoverishment of the European peoples led to a collapse of the Dutch cigar markets when hostilities ceased in 1918, and led to the need of government aid. Conditions have improved lately, but the trade is still far from normal. One problem the Dutch cigar makers have had to face was whether it is better to make their prices low to meet the necessities of their consumers, or raise them so as to make larger profits on their restricted sales. The majority of manufacturers resorted to increased prices. Today, cigars in Holland are much higher than they were before the war.

Cultural Methods in Java

The Javanese tobacco crops are planted in the Spring, after the rice is harvested. The methods of culture differ little from those used in the United States. Sometimes in the curing the aroma is "stimulated" by treating the leaf with solutions of odoriferous resins, hemp or opium. The chief exports go to Holland. Cut tobacco is marketed in Singapore, Penang and Hongkong.

Besides the Havana leaf grown for the European markets, the Javanese grow other types of tobacco for local and native consumption. The Besuki and Kedu districts are largely devoted to the growing of native tobacco crops.

Tobacco raising on a small scale is practiced in all the islands of the Dutch Indies. Considerable quantities of good tobacco are annually raised in the highlands of Sumbowa and Flores. The tobacco of these islands has a good reputation locally and is exported from Flores to the Straits Settlements and India and China.

Virtual Monopolies

In glancing over the history of the development of the tobacco growing industries of the Dutch East Indies, we are surprised to learn they are of comparatively modern origin and are regulated, with the sanction of the local and home governments, so that they are, in a large measure, controlled as monopolies. They are valuable assets of the Dutch people and are producing steady revenues. They are capable of being greatly extended whenever the planters desire to raise larger crops. Whether the growers are making the best of their opportunities by following their present commercial policies is an economic problem which is open to argument both favorable and otherwise. The Dutch people are mostly favorable to existing practices. Foreign economists, however, severely criticise the methods on the ground that all monopolistic and restricted industries are basically unsound and inefficient.

These pictures show some exterior and interior views of a few of the many large cigar factories in Manila, Philippine Islands. They clearly exhibit the sanitary and wholesome surroundings in which Manila cigars are produced.

The Tobacco Industry and Its Role in Economic Life of Philippines

Tobacco Products Occupy Fifth Place Among Philippine Exports—Tobacco Has Kept Pace With Other Staple Industries—Cigars Form Bulk of Tobacco Exports — Experiments to Improve Quality of Tobacco—Effective Promotion Work.

By VICENTE VILLAMIN

PHILIPPINE tobacco exports provide some interesting figures. Tobacco ranks fifth in value among the exports of the Philippines. The following table is interesting as showing that its relative advance has only been in line with the progress of the other staple industries. Note that the percentage of tobacco exports to the total export trade of the Philippines a quarter of a century ago was even higher than it is at present.

Exports of Tobacco Products

(In Pesos—$0.50 U. S. Currency)

Year	Value, Pesos	Percentage of total exports	Percentage of total Tobacco sent to U. S.
1922	17,340,236	13	....
1921	16,564,434	9	24.63
1920	39,854,782	13	55.53
1919	31,390,084	14	44.67
1918	27,169,826	10	54.00
1917	14,301,081	7	73.73
1916	11,652,349	8	38.24
1915	7,409,868	7	31.57
1914	8,355,064	9	29.01
1913	9,933,936	10	33.40
1912	10,726,764	10	37.20
1911	7,636,162	9	24.10
1910	8,817,962	11	35.80
1909	6,649,068	10	22.32
1908	5,652,084	9	.66
1907	5,454,858	8	.90
1901	5,263,882	11	.02
1900	4,522,464	10	.25
1899	3,862,506	13	.17

Cigars Form Bulk of Exports

Cigars represent the bulk of the export of tobacco products. And the United States absorbs about 70 per cent of the total number of cigars sent abroad. Spain is the next best market for Philippine cigars, followed by China.

It is significant that the volume of the total cigar exports has not materially increased in twenty-five years; but it is noted that the value has gone up considerably. For instance, the 196,090,000 cigars exported in 1899, the first year of American occupation, were valued at an average of $4.82 a thousand, while the 154,879,000 in 1921 went for $20.84. The quality of Manila cigars is constantly improving and commanding better prices. The following table is illuminating:

Exports of Cigars

Year	Value in Pesos	Average Price per M (Pesos)	Percentage sent to U. S
1922	11,602,219	....	57.00
1921	6,454,886	41.68	61.36
1920	25,442,276	60.35	82.90
1919	18,157,707	46.28	76.16
1909	3,509,058	23.17	42.03
1908	2,118,656	18.28	1.73
1905	1,785,122	18.65	1.58
1901	3,664,898	15.37	.05
1900	2,316,834	13.42	.48

The sharp vertical increase of the percentage sent to the United States recorded from 1908 was of course due to the passage of law by Congress admitting Manila cigars free of duty. It may be stated, in this connection, that the maximum limit to cigar importation from the Philippines into this country was removed by the Act of Congress of August 29, 1916, generally known as the Jones Law.

Local Consumption Stationary

The consumption of factory-made cigars and cigarettes in the Philippines has not increased in fifteen years. The quantity of cigars smoked in the country is an index of the economic conditions. Years of depression register proportionate diminution in cigar consumption.

The following table will show the output of cigars and cigarettes, quantity retained for local use and the per capita consumption of each. It should be taken into account that the percentage of increase in population during the period covered by the statistics was high.

Cigars

Year	Production	Consumption	Per Capita consumption
1920	510,800,333	89,255,190	8.28
1919	499,059,234	106,719,772	10.10
1918	484,674,450	124,529,623	12.03
1917	412,138,207	127,613,707	12.68
1916	271,868,278	78,842,700	8.06
1915	184,308,392	49,660,705	5.23
1914	243,134,200	88,380,837	9.47
1913	282,096,996	90,334,554	9.86
1912	284,918,845	109,598,784	12.18
1911	228,251,291	96,034,291	10.90
1910	285,561,328	89,369,328	10.30

Cigarettes

1920	5,039,784,441	4,915,013,772	465.52
1918	4,720,005,675	4,605,477,690	450.66
1915	3,859,607,265	3,815,057,636	402.74
1912	4,404,929,808	4,369,974,718	485.92
1910	4,173,507,249	4,142,623,249	477.70

Imports and Exports of Cigarettes

The export of cigarettes is not making very much headway. With the exception of the boom years of 1918, 1919 and 1920 the exportation of cigarettes has not increased in volume in fifteen years to any great extent. In order of importance, Hongkong, Spain, China and Hawaii are the best customers for cigarettes. It may be mentioned that the cigarettes that go to Hawaii are used by the 50,000 Filipinos working in the Hawaiian sugar plantations.

On the other hand, the imports of cigarettes into the Philippines are growing by leaps and bounds. Over 95 per cent of these imports is supplied by the United States. The popularity which American cigarettes enjoy among their present devotees in the Philippines marks that country out as an important market. What is needed is a consumers' advertising campaign in the different parts of that country. It should be remembered that the Philippines have a high purchasing capacity, and foreign merchandise appeals to both the taste and the psychology of the Filipinos.

The following table is interesting as showing that the progress of cigarette imports is far ahead of the exports, a fact that should emphasize the necessity of cultivating a bigger foreign market. This idea is endorsed to the Philippine Government which, with respect to cigars, has established a system of rigid inspection, control in quality, outturn and exploitation of market, that is a model for its kind in the world, and an assurance of a great future for the Manila cigar industry.

Cigarettes in Foreign Trade

(In thousands)

Year	Export	Import
1922	53,197	.....
1921	39,837	230,584
1920	124,770	128,747
1919	155,307	71,919
1918	114,527	59,150
1915	44,549	12,498
1913	47,882	5,112
1911	33,662	1,796
1910	30,884	1,352

Leaf Tobacco Becoming Important Export Item

That leaf tobacco is coming to the fore as an important item of export is evidenced by statistics. With the exception of 1917, when the United States took 61 per cent of the total leaf tobacco exports, foreign countries absorb 99 per cent of the Philippine leaf tobacco that is exported yearly.

Among the biggest takers of Philippine leaf tobacco are Spain, Austria, Belgium, France, Japan and China. Spain is served almost exclusively by two great companies in Manila controlled from Barcelona and Madrid. This is also true with regard to cigars and cigarettes.

Leaf Tobacco Exports

(Including other unmanufactured tobacco)

Year	Value in Pesos	Average Price per Kilo in Pesos (kilo—2.2 pounds)
1922	5,572,137	.....
1921	9,690,819	0.43362
1920	13,982,003	.67630
1918	12,633,707	.49118
1909	3,072,688	.32300
1908	3,417,512	.30230
1901	1,496,970	.18980
1900	2,067,800	.20700

The Philippine Tobacco Acreage

The tobacco crop for 1921 was a decrease of nearly 19 per cent compared with that of the year preceding. The acreage was also 10 per cent less. The violent typhoon which crossed the Cagayan Valley a few months ago destroyed a substantial portion of the crop for the present year.

The Philippine tobacco crop is affected directly by three things: prices, drought and heavy rains. When market prospects are not good, rice or sugar cane is planted in tobacco lands. Thus, with diversified farming, the tobacco grower gets supposed relief in times of disastrous prices. This is, however, in its totality, uneconomic and in the final accounting a financial loss, as the tobacco culture, being highly specialized, a regular, steady concentration of efforts are needed to enable the production of good tobacco which will preserve its place in the world's markets.

Tobacco is grown in the tropics as well as in semi-temperate and temperate countries. Tobacco culture has reached a high stage of development. Tobacco enjoys the highest tariff protection in all countries. It is no wonder, therefore, that it is one of the most competitive articles in the markets everywhere. The Philippines can do no better than pay close attention to the development of the tobacco industry, from the time the land is prepared up to the delivery of the finished goods to satisfied distributors in the consuming markets.

The following table shows the progress of the tobacco industry in point of quantity of output:

Acreage and Production

Year	Area cultivated in hectares	Quantity produced in kilos	Average yield per hectare in kilos
1921	90,980	52,799,030	580
1920	101,123	64,893,534	642
1917	61,776	48,928,621	792
1914	60,890	46,731,463	767
1911	69,016	25,518,132	370
1902	31,417	17,009,291	541

The area cultivated in 1921 was 40 per cent larger than the average of the five-year period

from 1915 to 1919, and 47 per cent larger than the average for 1910 to 1914. The output was valued at $4,388,787 in the municipal markets and fetched an average of 8½ cents per kilo thereat.

Practically three-fourths of the total area cultivated and four-fifths of the total production were credited to the provinces of Isabela, Cagayan, Cebu, Pangasinan and La Union. Nearly all provinces in the Archipelago grow tobacco of indifferent grades. This production supplies the home needs of their inhabitants in some degree. The tendency at present is to devote lands and experience to well-established products of the district and thus establish an economical and satisfactory inter-dependence among the different provinces.

Opportunity for extension of tobacco acreage will be centered on the region on the north central Luzon, traversed by the Cagayan River. This Philippine Nile makes the Cagayan Valley an ideal producer of high class tobacco. Much remains to be done, however, to realize this, and among them figure, not only scientific culture but also finance, labor, transportation and distribution.

Tobacco Development Work

The Bureau of Agriculture is conducting experiments to improve the quality of tobacco. An experimental demonstration station is maintained at Dammao, Isabela and Cotabato, Mindanao.

At Dammao work is being done to improve the native varieties—the Dammao Large Broadleaf, Dammao Small Leaf, Espada Dammao, etc. Selection work has also been done, foreign varieties being the subject of experiments, among them being the Sumatra, Florida Sumatra, Connecticut and Habana. At the Cotabatao Station the Florida Sumatra and the Dammao Broadleaf gave the best results in the variety test. The Florida Sumatra yielded 11 per cent of the crop suitable for wrapper and the Dammao Broadleaf 3 per cent. Much hope is placed on the results of the experiments with the Florida Sumatra in view of the fact that the variety is still in process of acclimatization and its possibilities are yet undetermined. Varieties of Connecticut Round Tip, Batoli, and Baker's Sumatra are also being tried.

Soil sterilization experiments are under way to find out remedies for fungus diseases like the damping-off disease, leaf rot, root rot and the Cercospora nicotiana. It has been found that tobacco seed sown in partially seed germinated earlier and yielded a bigger percentage of germination than the seed sown in an open seed bed. Important results have been secured from the trials conducted in stalk-curing and air drying. Increasing interest is manifested in all quarters in the production of quality leaf tobacco.

The Manila Cigar and Cigarette Industry

All the cigar and cigarette factories are located in the city of Manila, the industrial as well as the commercial and social center of the Philippines. Fifteen thousand workers are daily employed in these factories. This number is bigger than the total number of workers in all other factories in Manila combined.

The employment conditions in Manila are largely dependent on the state of the tobacco market. Efforts put forth to increase and stabilize demand for Manila cigars abroad, most especially, of course, in the United States, affect directly the welfare of many thousand families in Manila, not to speak of the other thousands in the tobacco-producing provinces. It is most encouraging to see that the Bureau of Insular Affairs, War Department and the two Philippine tobacco agents in the United States are sparing no efforts to promote the Manila cigar trade in this country.

Manufacturers, importers and dealers are also doing wonderful work to get Manila cigars across. The cigar manufacturer in Manila who allows poor merchandise to leave his factory for the United States not only discredits his product but also reduces the opportunities of labor, not only in his own factory but also in other factories, as the industry in general cannot escape the bad name which "Manilas" earn. The responsibility, therefore, of the manufacturer to put out goods that are up to the standard is to himself, to the other manufacturers, his employees and the other manufacturers' employees. As serious a responsibility as this should work for ever-improving quality in the output of every cigar factory in Manila which sells a part of its output in the United States.

Co-operative Efforts Necessary

The Philippine Government derives substantial revenue from the tobacco industry. It cannot, therefore, afford to permit the least sign of demoralization of the Manila cigar trade in America to exist unchecked. Manila factories are in perfect accord with the Government that Manila cigars shall earn and maintain a good name in this market. But this determination is lacking in complete expression.

In Manila, they are just beginning to talk about co-operative marketing, a subject that deserves much study in view of the peculiar conditions obtaining in the tobacco regions. There is too much intermediate handling, and the bulk of the returns goes to every one else except the planter. Adequate financing, transportation problems, and warehousing are other pressing subjects which are hardly touched. And there is, of course, the question of improving the leaf production.

All efforts in these various directions will be only partly availing if foreign markets for the product is not properly and adequately cultivated. Perhaps, in view of the psychology of the situation, it may be an excellent idea to cultivate demand intensely in the United States first and then let the industry in the Philippines work under the pulling influence of the market. In this way, producers will be encouraged to increase the quality and quantity of output. The reverse, that is, production first in quantity over the demand of the present market, would, under existing circumstances, be most speculative and undesirable. A demand bigger than the supply, will give a much needed lift to the development of the industry. That condition in 1909 led to demoralization in quality. This can be avoided now by more rigid inspection on both sides of the water. The idea of the whole thing is to give the Filipino planter a hard shaking-up, and to lead him to the realization of the great opportunities that are before him.

A more intense advertising campaign in America, backed up by both the Government and the industry—the Government has to take part in this work for sometime yet—should usher in the desired ends. America is an enormous market. All countries vie with each other here to sell their products. Big sums are used for advertising purposes. The Philippines should not be behind in this kind of efforts now. This is the time to build securely and broadly.

Filipino-American Co-operation Will Be Fruitful

A survey of the future will reveal that America will depend more and more on the Philippines for tropical raw materials. Tobacco is an article which can be developed on a large scale in the Philippines. America imports yearly about $75,000 worth of tobacco from foreign countries, paying heavy import duties. If the Philippine industry is studied and developed, this country may not need to import tobacco from foreign sources, and save the enormous sums of money paid under the tariff law. Buying from the Philippines is helping the American industries that sell thereto. With respect to other countries, the fact is they sell to America and buy from Europe. The case of the Philippines is different—they sell to, and buy from, the United States. The idea, therefore, of a certain portion of the tobacco industry in America to restrict the importation of Manila cigars is shortsighted. Congress is not going to heed their imagined hard luck stories. And the Manila trade in America and those who desire to handle Manilas need not feel, it is believed, the slightest apprehension that their trade will be legislated into a cocked hat, so to speak, by the Congress of the United States.

Co-operation, indeed, will be mutually advantageous. I am sure I do not misread the real desires of the Filipino people, often mistakenly interpreted by political spokesmen, when I say that they welcome American capital and American enterprise to their midst, for they know that in America they have an unselfish friend and a wise mentor.

Duplicating Qualities

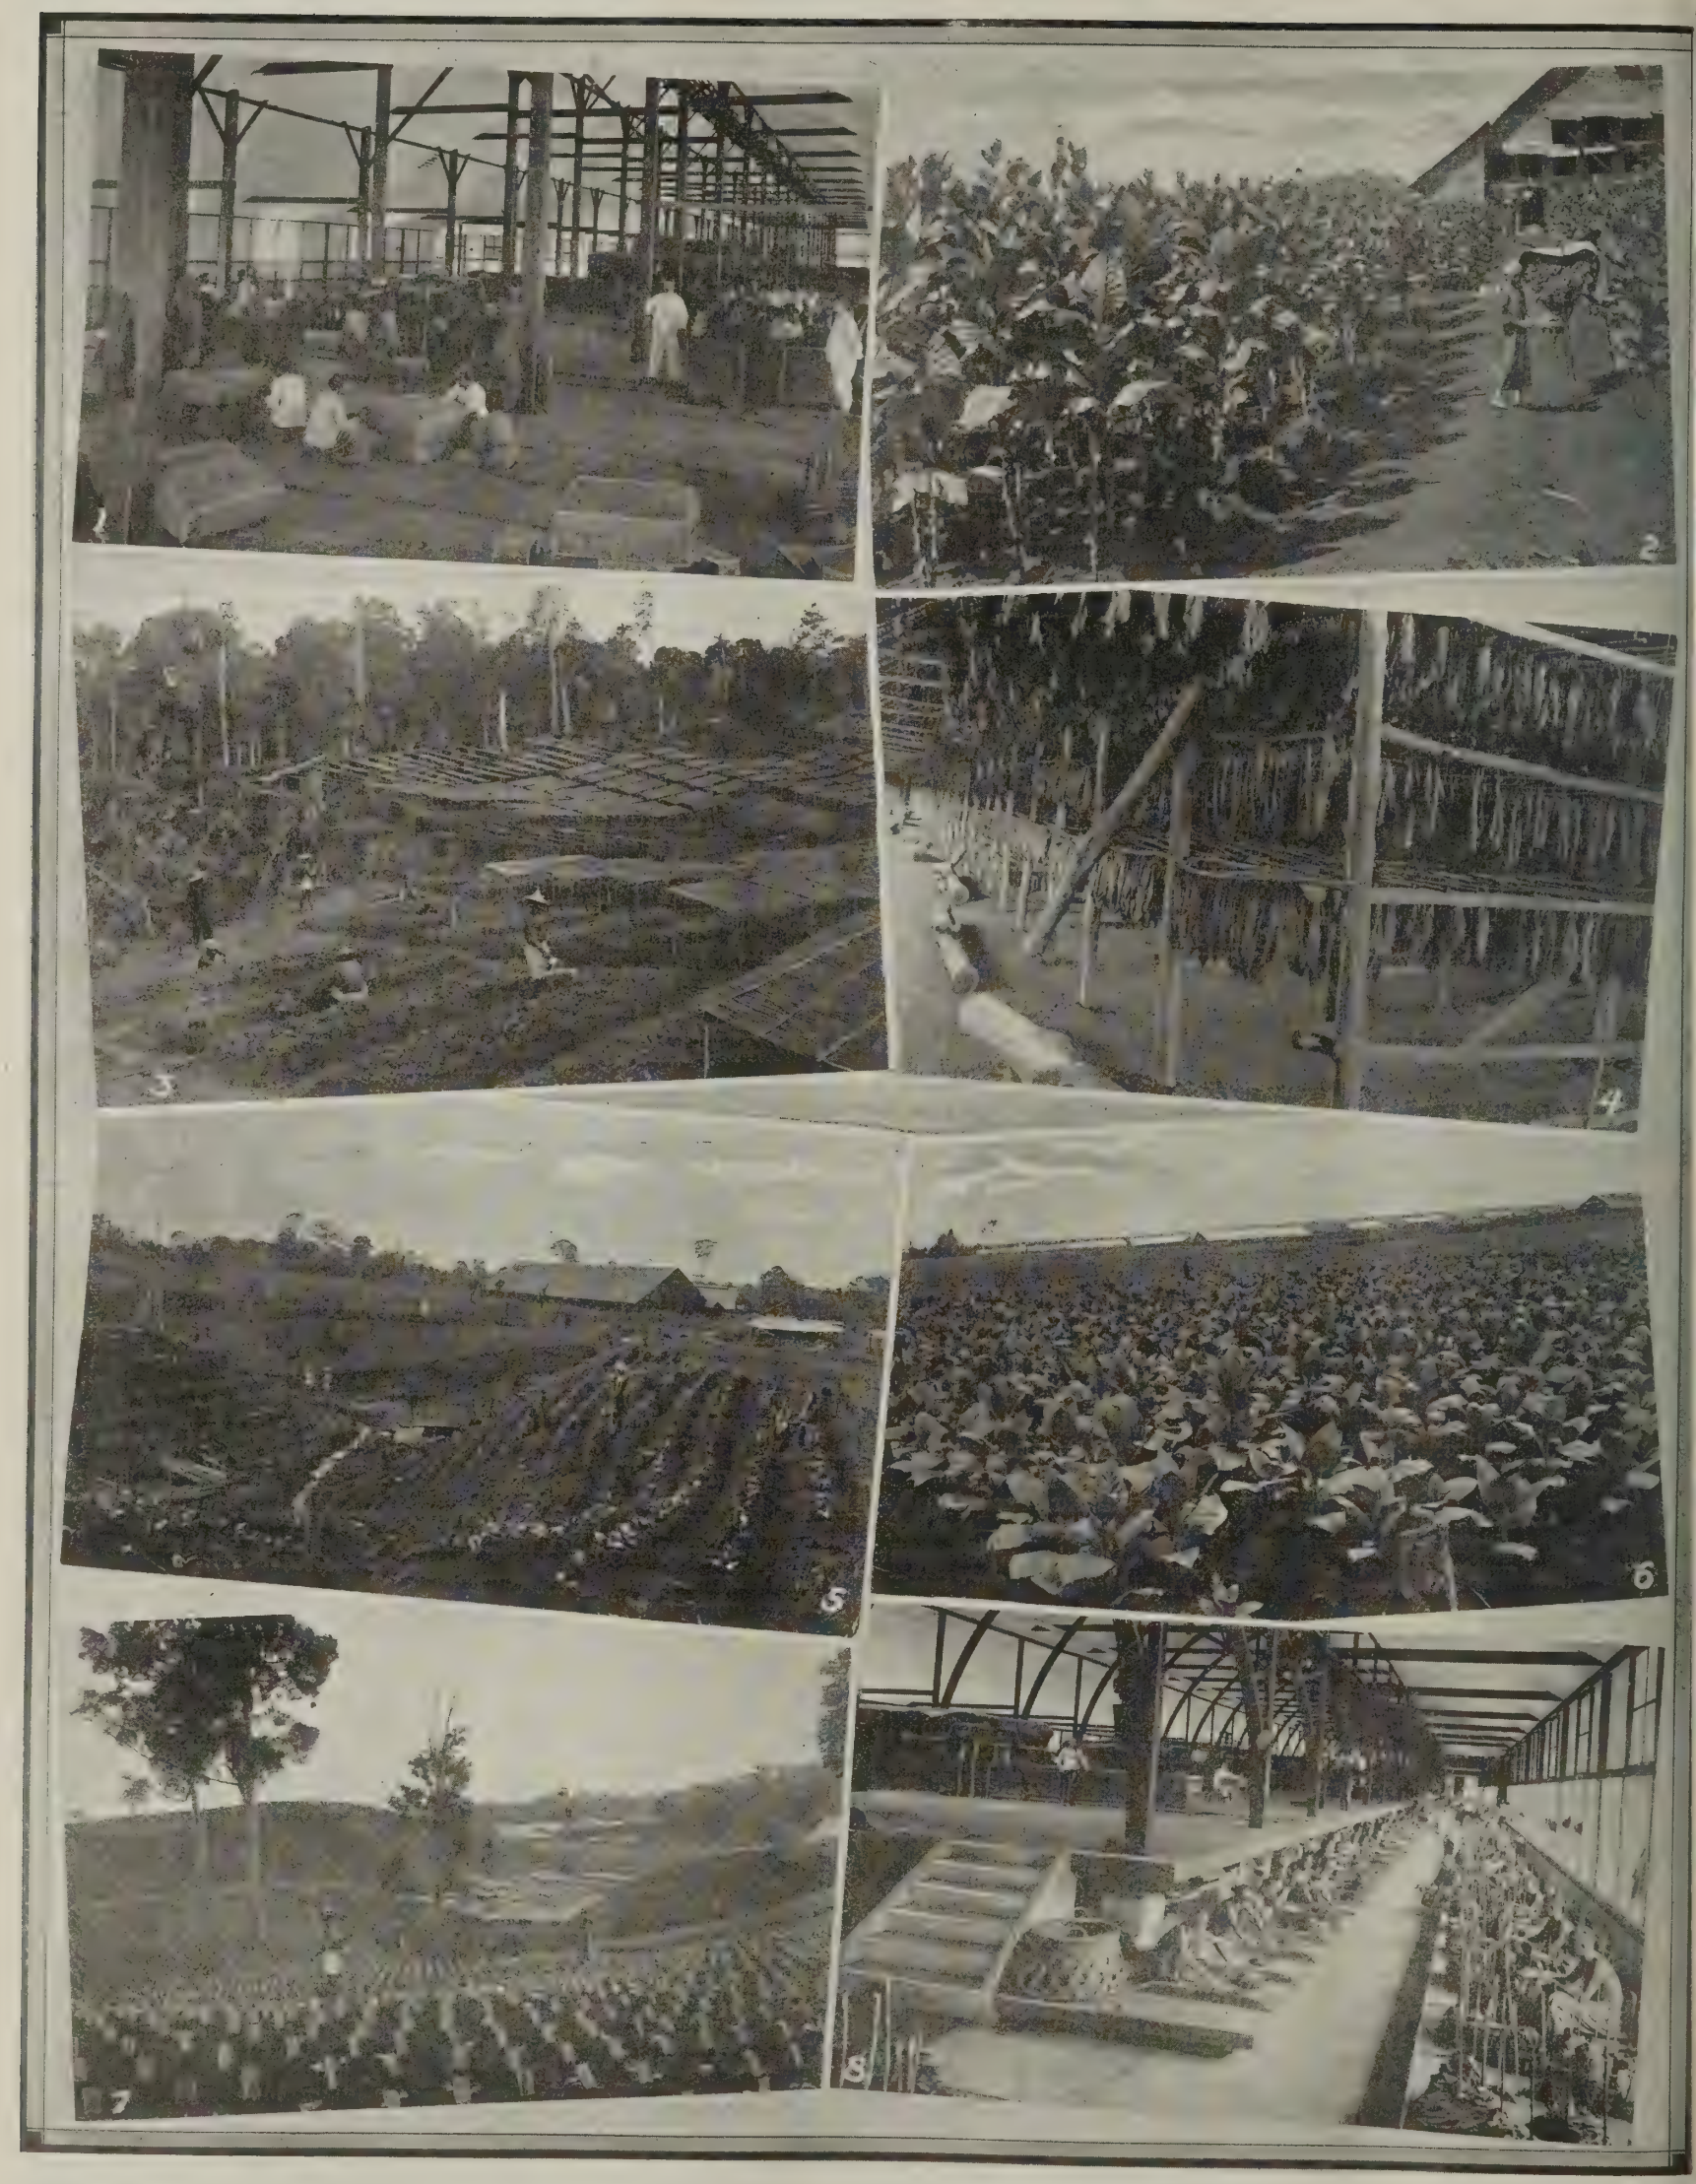
In the merchandising of any commodity it is first necessary to ascertain the duplicating qualities of what you have to offer. Writing along these lines, E. M. Freeman of Sidney J. Freeman & Sons, says:

"When Manila cigars were first brought into the United States duty free, Sidney J. Freeman, the senior member of our firm looked carefully over the situation and by honest comparison concluded that the La Flor de Intal Cigar Manufacturing Co.'s cigars were by far the best manufactured in the Philippine Islands and more adaptable to the American smoker. In the twelve years that have passed we have found that his judgment was correct.

"In the face of price competition our La Flor de Intal, Magallanes and Puntacimas which were higher in price have withstood the onslaught and gained a foothold in the minds of the jobbers and retailers for they, too, realized that quality counted.

"We have, today, a staple business on our La Flor de Intal, Magallanes and Puntacima cigars, concentrating our efforts on the following sizes: Londres, packed 1/10, one bundle; Intal Extras packed 1/10, 2 bundles; Harold-E packed 1/20 banded; and Siestas packed 1/20 banded which comprise our five cent (5c) sizes. On our 8c, 2 for 15c number we have the Eminente size packed 1/40. On our 10c number we have the Sidsons size which is Sumatra wrapped. On our 15c number we have the Excellentes size, also Sumatra wrapped.

"It is a known fact that jobbers who desire to build up a duplicating cigar business always look for brands that have a reputation and that are known as trade getters and business builders. The La Flor de Intal, Magallanes and Puntacima cigars are such brands. Jobbers who are in the market, today, for the highest quality cigars manufactured in the Philippine Islands should communicate with us.



"Many jobbers and retailers have entertained the thought that all Manila cigars were alike. That, however, is not so. You would not typify all cigars alike that are made in Tampa, Pennsylvania, New York or any other place? Of course not. Each factory uses a different grade and blend of tobacco. The La Flor de Intal factory uses nothing but the best long stripped Isabela tobacco grown in the Cagayan Valley that is well aged and cured.

"Dependable cigar business can only be built on staple cigars. La Flor de Intal, Magallanes and Puntacimas are staple.

"Bear in mind that 'A Cigar, A Smile, Make Life Worth While.' He who lights a La Flor de Intal, Magallanes or Puntacima cigar will smile with contentment."

Hurts Dutch Cigar Trade

An association of cigar manufacturers has called the Dutch Foreign Minister's attention to the fact that since Denmark has doubled its import duty on cigars that market, which has been one of the few export markets open to the Dutch cigar industry, will be practically closed. —*New York Times.*

Typical scenes on a Sumatra plantation: 1, Pressing and packing in bales. 2, Field of ripe tobacco. 3, Seedling field. 4, Tobacco in drying shed. 5, Banking plants. 6, Half-grown tobacco. 7, Young plants under shade planks. 8, Sorting.

Wrong Inferences Drawn from the High Prices of Sumatra Tobacco

Some Extravagant Figures Reached—Not Much Sumatra May Be Considered Expensive—Has Elastic Covering Qualities—Blends Well With Almost Any Filler—Cigar Manufacturers Derive Many Advantages by Buying Sumatra in New York

By HENRY M. and JOHN H. DUYS

SMOKERS in America have always been blessed with fine tobacco. The early colonists raised on their own farms in the Southern states, a type of tobacco which was well suited to their taste. For more than a century they grew the finest of the world's tobacco crops. Later, as the commerce of the world expanded, Cuban, Porto Rican and other tobaccos began to appear on the American market. For a brief space, Mexico supplied a popular cigar tobacco. Then Holland exported to New York some of the finest wrapper leaf tobacco grown in the Netherlands East Indies, which immediately attracted the attention of tobacco men and has since made a great place for itself in the American tobacco world.

It may be said truly today that the most popular wrapper used by American cigar manufacturers is the first quality of Sumatra leaf. It ranks high with American cigar manufacturers because of the reliable way in which the tobacco is packed, its silky texture, its even, light colors, its high quality and its aroma.

Sumatra wrappers will blend with almost any filler tobacco and will give excellent satisfaction to the smoker.

Has Expansive Yielding Qualities

Notwithstanding that the American duty on this tobacco is at present $2.10 per pound, or expressed in percentages, about 100 per cent, it is an economical wrapper as every cigar manufacturer can depend upon it that Sumatra tobacco will give him a thousand wrappers out of every two pounds. It is on account of this big yield that Sumatra wrappers can be used on the so-called class "B" cigar (which sells for five cents retail and upwards) as well as the higher grade cigars. The smokers of these types of cigars demand strictly light colors, which are found in a larger percentage in Sumatra tobacco than in any other wrapper crop grown.

The average consumption of Sumatra tobacco in this country is about 30,000 bales of the finest grades produced, weighing about 170 pounds net, each. The average bale of Sumatra makes about 85,000 cigars, so that it will be seen that between two and three billion American made cigars are wrapped with Sumatra tobacco, out of a total production of approximately seven billion cigars per annum. The United States Government collects between nine and ten million dollars revenue in import duties on Sumatra tobacco alone.

Spring and Fall Inscriptions

Sumatra tobacco is sold at inscriptions or auction sales during the Spring and Fall of each year, in Amsterdam and Rotterdam, and these inscriptions are largely attended by cigar manufacturers and leaf tobacco dealers from all over the world. At these sales the tobacco is sold by the various growing companies, the largest among whom are the Deli Maatschappy, Deli Batavia Maatschappy and several others, by sealed bids, which has been found to be the most satisfactory way of sale. This method of sale always leads to great excitement and competition between the various buyers, and the best prices are procured by this method, which is naturally to the advantage of the growing companies.

Auctions in New York

During the war, when Holland was practically blockaded by U-Boats, it was impossible to ship Sumatra tobacco from the Dutch East Indies to Amsterdam, and it looked at one time as though America would be without this much desired article. Several of the leading tobacco importers in New York formed the Sumatra Tobacco Import Corporation, which has since been liquidated, and brought the American grades of tobacco direct from the Dutch East Indies, shipping this tobacco direct from Belawan, a harbor on the east coast of Sumatra, to San Francisco and New York. The inscription method was then also pursued in New York, and it was attended with enormous success, and tremendous prices were paid, as the importations were naturally limited, and the cigar manufacturers extremely anxious to secure desirable wrappers. Since 1920, however, inscriptions have again been held in the normal manner in Amsterdam, and the tobacco is shipped from Sumatra to Amsterdam, and from Amsterdam to New York.

Strong Competition

During those troublous war times, tobacco brought as high as $5 per pound for grades which formerly sold in Amsterdam around $2 to $2.50, but for the last few years Sumatra tobacco has still remained at a very high level, as compared to the pre-war prices. At the first inscriptions which were held on May 13 and 20 of last year, the average prices for running lots were anywhere from $3 to $4 per pound for fancy tobaccos. This was due to a great extent to the strong competition from Continental European countries, also the demand for strictly light, greenish cast tobacco, which seems to have gradually become a world wide demand. This year competition has been unusually keen.

It is to be regretted that the enormous prices have been paid, as, like everything else, there is a decided decrease in the cigar production in this country, and as the consumer demands lower priced cigars, just as he demands lower priced shoes and clothing, it is hard to reconcile these high prices with the demands of the individual smoker.

The Sumatra growing companies have been extremely successful in the past, making tremendous amounts of profit, and although labor has gone up, and the materials used are naturally very much higher, the land owners in Deli have declared very handsome dividends to their stockholders.

Demand Calls for Increased Cultivation

The recent amalgamation of Dutch companies which are operating plantations in Sumatra, and the growth of the capital employed on the plantations, showed that those who are engaged in the industry find that the demand for the tobacco is calling for increased cultivation and production, and also that the outlook for the industry is sound. According to the views of experts, there is not much room for expanding the plantations in those East Coast districts which yield the best tobacco. There can be no doubt, however, that the growers will be able to cope with the demands made upon them for the leaf. An economical question involved in the proposition is as to whether it is better for the growers to restrict the area of growth with a view of securing higher prices for the leaf of fine quality, or whether, by extending the area over which the crops are raised, they would not secure better revenues by larger crops which they could market at lower rates per bale. This proposition has been discussed by many firms interested in the tobacco industry in Amsterdam, but nothing definite in the way of a conclusion has been arrived at, consequently, the old trade policies are continued.

Medium Grades Are Preferred

At the inscriptions in Amsterdam in recent years, particularly during and after the war, extraordinary high prices were secured on account of the great amount of competition among the buyers of Sumatra leaf. One American firm bought twenty-five bales at nine dollars per pound. This, naturally, caused much comment in the tobacco trade and appears to have given an impression in some quarters that manufacturers of the lower-priced cigars are unable to go into the market for Sumatra leaf. The truth is that such choice tobacco is only purchased by a comparatively few cigar makers for the manufacture of the highest grade cigars. Only a few manufacturers supply themselves exclusively with the fancy bales of Sumatra leaf. Most users of Dutch tobacco secure the medium grades which the general public favor.

Superior Advantages in New York Market

The American manufacturer who purchases his supplies of Sumatra tobacco in the New York market has many advantages over his rivals who make their purchases in Amsterdam. He is able to secure easier terms and accommodations than Sumatra importing houses afford their customers, he is able to select just the type and quality of leaf his trade and customers call for and is not compelled to take running lots. He can buy one bale as easily as one hundred bales and has ample opportunities for testing the bales he buys. The men who buy upon the Frascati do not have these and many other privileges.

Popular Sumatra at Reasonable Prices

The Sumatra leaf is so select and, excepting for a few fancy lots marketed each year, moderate in price, that any manufacturers of cigars can use it for wrapping purposes. Those who employ Sumatra wrappers regularly, know the truth of this. Those who have kept out of the market on account of the sensational prices some of the fancy packages brought at the recent sales in Holland, are unwise in assuming that all Sumatra prices are high. A little investigation of market conditions will show them that grades of Sumatra leaf can be secured in the American markets at prices suited to practically all makes of American cigars. The steady growth of transactions in the New York market afford the strongest evidence of this fact.

Alert Importing House

D. Dreux, Inc., dealers in Sumatra and Java leaf tobacco, 136 Water street, New York, are the first tobacco merchants to use the recently adopted slogan, "After all, nothing satisfies like a good cigar," in their advertising. Mr. Dreux, who is a great believer in catchy slogans, expresses the view that the general use of the new slogan by the trade will greatly increase the consumption of cigars. At the recent inscriptions in Amsterdam and Rotterdam, Mr. Dreux was fortunate in securing a good quantity of Sumatra and Java tobacco of various fancy marks, and, as a result, the choice wrappers offered to their clients are in great demand throughout the country.

Building Manila Cigar Brands and Efforts Necessary to Success

Philippine Products Have Had to Overcome Numerous Handicaps — Formerly Shipped With All Sorts of Mixed Cargoes—Reforms Putting Manilas on More Equable Basis—Importers Now Able to Build Business on Reputation of Brands.

By CHARLES ALLEN BOND

FIVE OR SIX years ago there was scarcely a cigar jobber in the United States who thought seriously of any scheme to bring Manila cigars to the United States and establish the trade on a brand basis.

"Manila was too far away," they said.

"It will be impossible to overcome time and distance and keep an adequate supply of staple cigars on hand to meet demands."

During the war when shortage of every type of cigar was the rule rather than the exception, there was foundation for this opinion. Trans-pacific shipping was all shot to pieces. Freights went up to *$60 per ton* and to obtain any transportation at all, Manila factories were forced to use all sorts of ships; *very* few that were good, many that were bad, and the arrangement for storage was always indifferent.

Sometimes cigars came through torrid weather, mixed in cargoes of copra, raw sugar and green hides. Nothing was ever sure! Few cigar distributors in the United States could depend on any factory or any ship for cigars not damaged or touched by deteriorating causes.

No wonder the American trade shook doubtful heads and denied the possibility of building a Manila brand.

But always the times produce some one who will tinker at a proposition until he works it out. Here and there were trained cigar men who perceived the possibilities of "the Manila brand." They discovered that the smoker would take to the cigar and that he would stick. If they tried to sell him something else, "just as good," he was inclined to protest.

And then there was a certain individuality about the cigar that could not be imitated, and that fact alone was enough to lay an excellent foundation for a brand-building campaign.

Manila Can Co-operate

Another point that fortified the belief of certain importers in the favorable brand building features of Manila cigars was the fact that several factories had continued over a period of years to deliver to the United States' market sound merchandise, free of any damage whatsoever.

If one could do it, so could another!

Clean and marketable cigars must be a matter of selected tobacco properly cured and carefully worked in the factory, and a matter, too, of clean transportation.

With these thoughts in mind importers and Philippine Government agents set earnestly to work to safeguard the good name of a great industry. Government inspection at the factories was made more critical. The advice and co-operation of the steamship lines converging at the Port of Manila was sought and obtained with the result that now a steady flow of good cigars are coming from the factories and the transports are carrying Manila cigar cargoes in the sweetest and cleanest compartment to be found aboard ship.

These changes and improvements in manufacturing and delivering cigars are reflected in the steady increase of the sale of staple Manila brands, and the gradual elimination of the job-lot importer.

Brands on the Pacific Coast

On the Pacific Coast where Manilas have made greater progress than in any other part of the country, the business is a brand proposition absolutely.

No one buys a job for that market. Nondescript brands are not wanted at any price. Low prices for merchandise that is merely "so many cigars" will not turn the jobbing and retail trade of the Far West from the path of sure profits on staple cigars.

Smokers have been educated to expect at least a nickel's worth. Anything cheaper does not interest them. Therefore, the jobbers and dealers must compete on quality rather than on price. The smoker has a lot to say when he can identify his purchases and can measure accurately the value and quality of brands packed under various Manila labels.

The movement to establish Manila brands has spread from the Far West to other portions of the United States, and it is only a question of a short time when the successes of the importers and jobbers of the Pacific Coast will be repeated in many places.

In a preceding paragraph reference was made to a certain individuality in the Manila cigar which gave the brand-builder a sure foundation to work on.

Advertising Value

Every advertising expert will tell you that to win a permanent success and to benefit from the application of intensive advertising, it is essential that the article so advertised have certain specific qualities that set it apart, that it must have merit. Just advertising alone cannot build up a great trade.

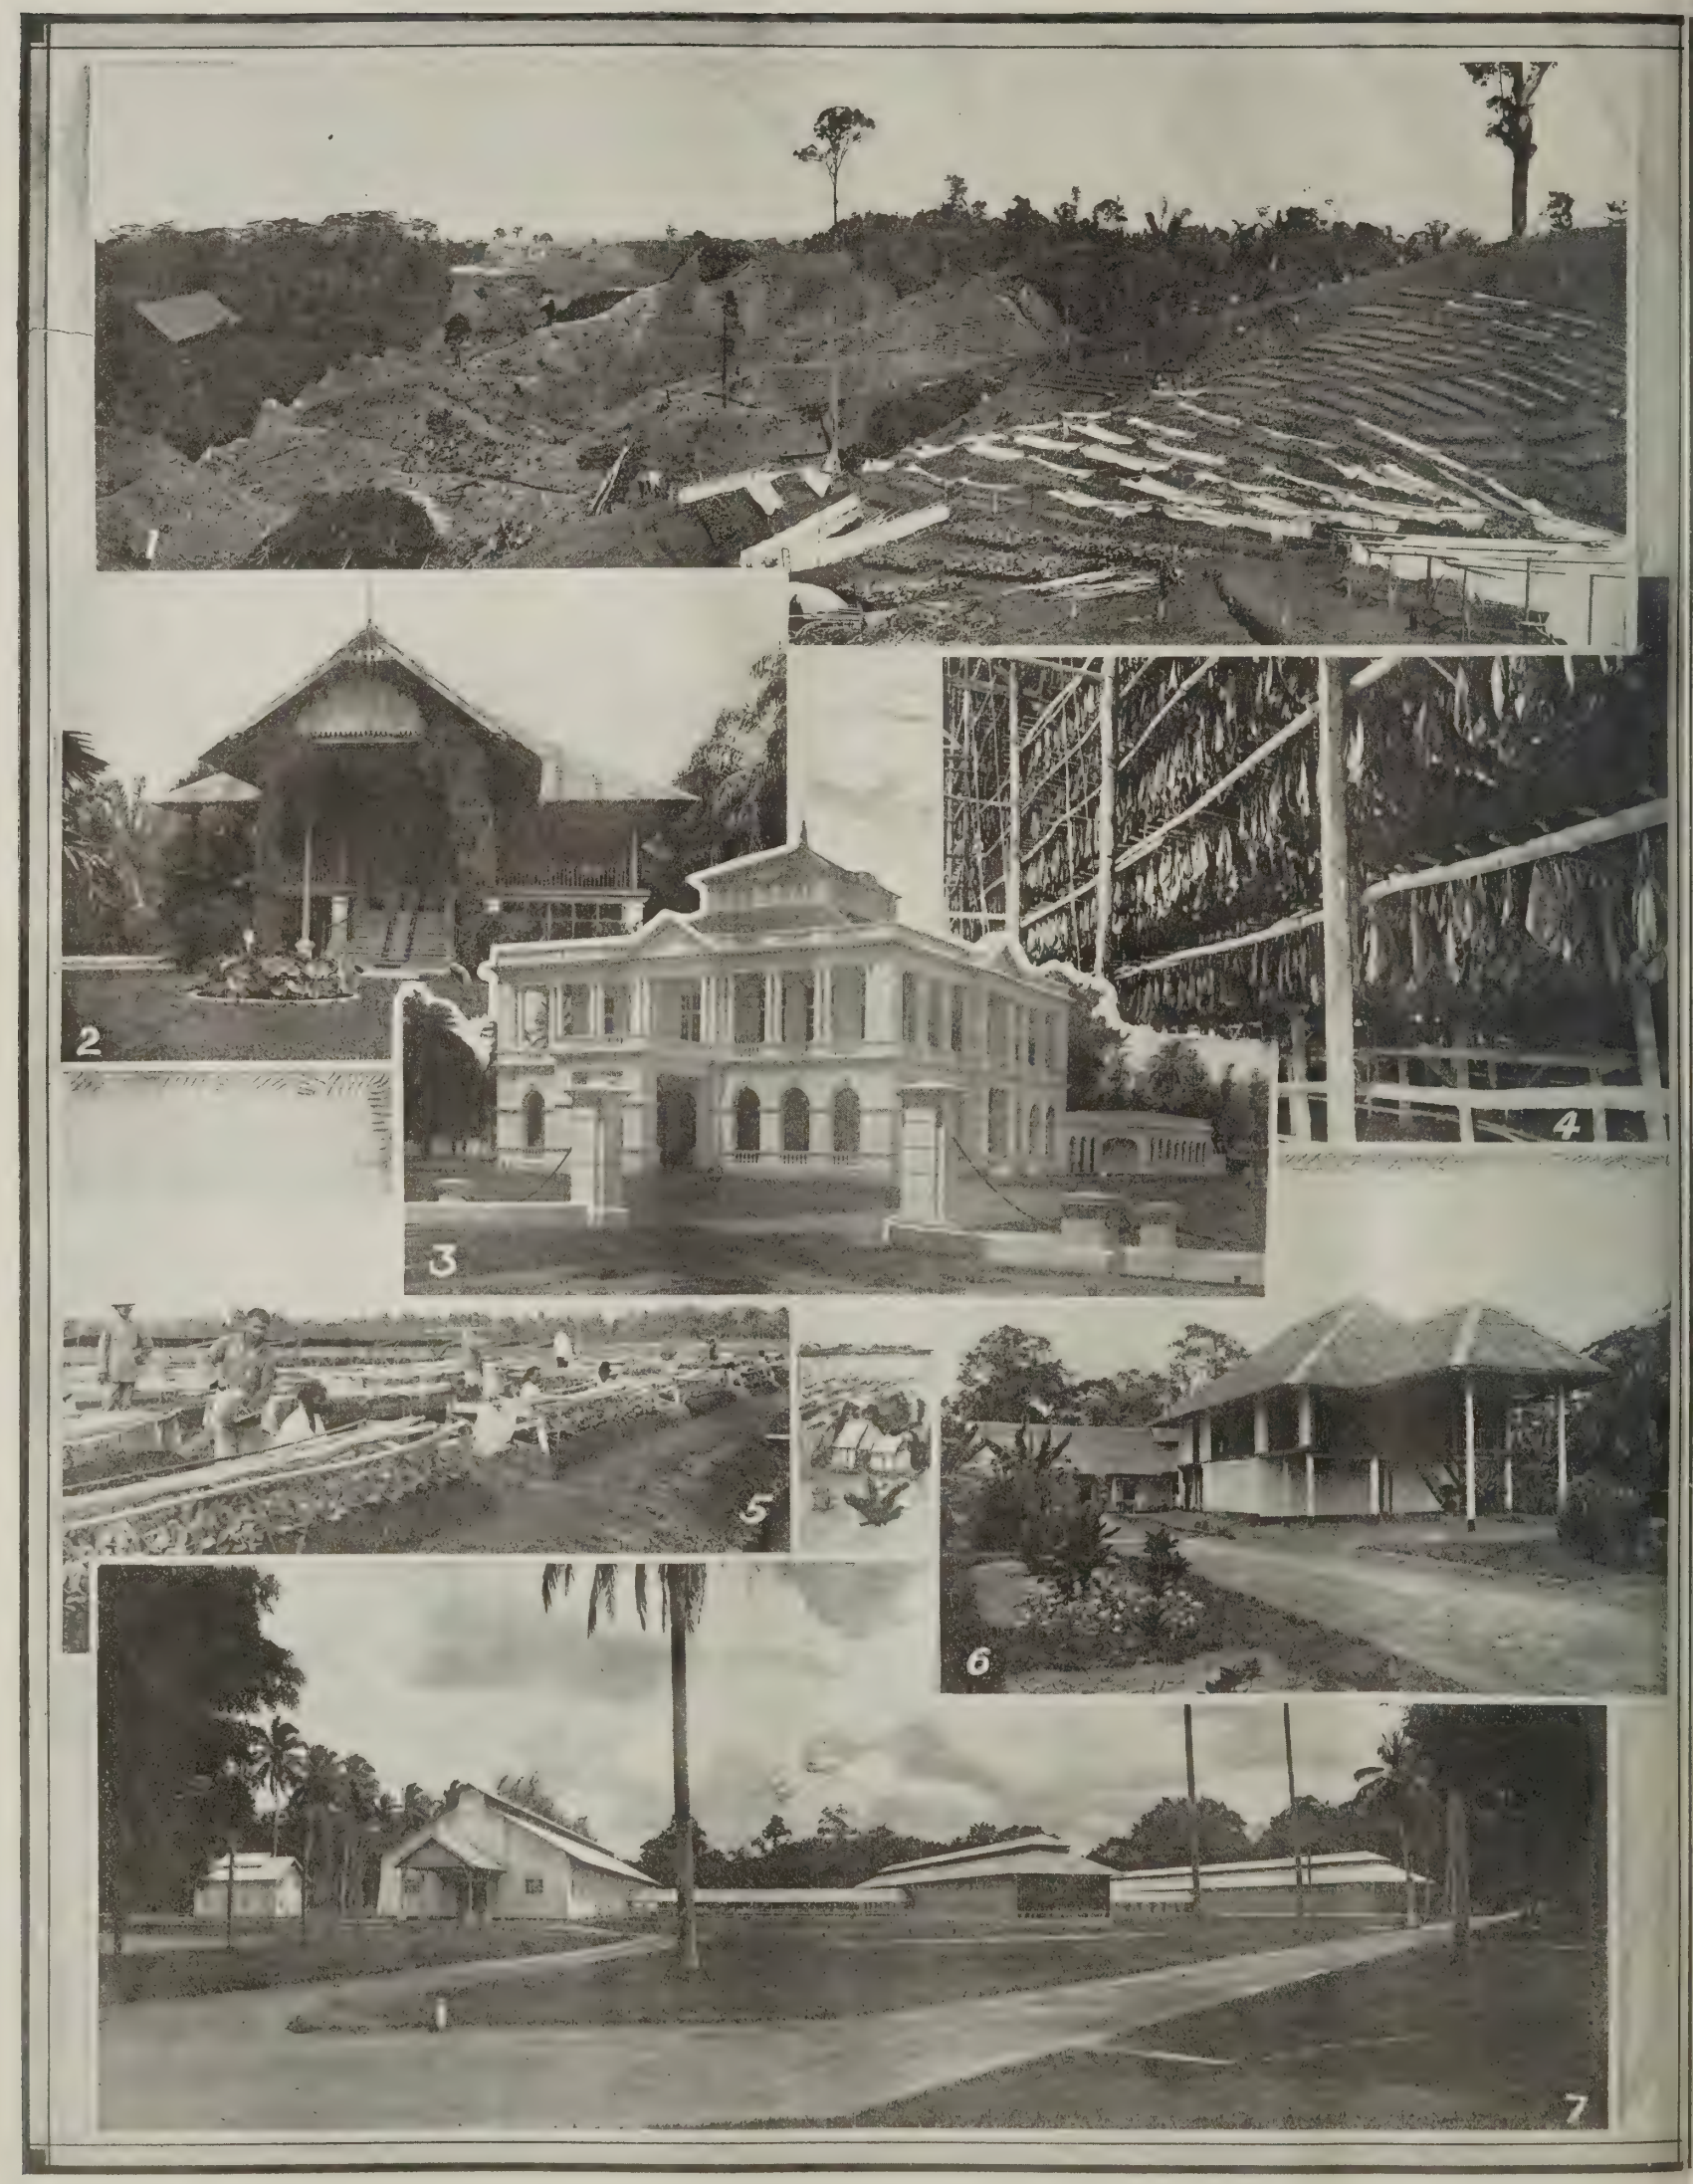
That point is admirably illustrated by the Manila cigar.

And it is not one thing alone that commends it for successful exploitation, but a number of things. For instance, it tastes different from any other cigar. It is very mild. It cannot be successfully imitated. Made with long-filler, and hand-work, in even the cheapest sizes, it possesses all the smoking qualities of the most expensive cigars. Manila cigar leaf tobacco burns perfectly. And then above all when a smoker becomes familiar with Manila cigars and he gets hold of the brand and the shape that suits him, he will stick just as hard and fast as the mule-skinner does to his favorite chew or the cow-boy to his favorite bag of "makins."

And that something in a cigar that gets 'em and holds 'em is the thing to tie to when you get ready to start brand-building.

Shapes and Sizes

A certain size is popular here and it fades out over there. Some smokers want them big and thick in one section, and the thin panetela gets the call in another. There seems to be an eternal conflict between the effort to distribute one shape throughout the United States, and make 'em like it, and the determination of the smokers to get their cigars the way *they* like 'em.



No one has succeeded yet in creating an adjustable cigar that fits every mouth, and meets the varying humidities of every climate.

However, there is no denying the fact that many serious minded men are focusing their attention on the cigar market with a view of determining just what is most likely to please the greater number of smokers, reduce the extravagance of "Cigar Styles," and get down to a less expensive method of meeting local demands in various sections of the country.

What is true of the domestic cigar is also

This characteristic field shows the luxuriant growth made by tobacco on the fertile soil of the Philippines.

Deli-Maatschappij Views: 1, Bird's-eye view of nursery beds. 2, Estate-manager's home. 3, Office of the Company in Medan (Deli). 4, Interior of dryi shed. 5, Young tobacco plants in the nursery beds. 6, Assistant manager's house. 7, Fermenting sheds.

true of the Manila. Some peculiar shapes of Manilas find great favor in one state and they lose out in another. And there is always a good reason. The change of climate, from the humidity and moisture near great bodies of water to the high and dry territory not far removed will change a cigar from a sure winner to a place among the "also rans."

It is here, in the brand-building game, that the jobber wants to put a lot of thought on his Manila line.

Several things can happen!

For one, the temptation to take on a beautiful size may lead a jobber to order cigars not adaptable to the peculiar climatic conditions where he operates. He might go strong with a straight shaped cigar where a perfecto under the same brand would be left to wither and die; or, the case might be reversed.

Keep Them Fresh

Manila cigars, if neglected, dry out just like other cigars. Care should be taken always to keep them fresh and in prime condition. Small quantities and shipments twice a month are preferable to large orders every two or three months and a condition where overstocking and deterioration is not only possible but probable.

Remember that excellent transportation may be had from Manila every few days and that the boats are as regular as the cars that pass your door.

Try to anticipate your wants for three months in advance. The year will continue to have four seasons, and the buyers will take their vacations during July and August. Business will slow down after Christmas and New Year's, pick up in the spring, and get good in the fall. That Manila business should be made to conform to these well known conditions, goes without saying.

The point is, the jobber must look ahead and co-operate with his importer and factory to obtain proper supplies at the proper time.

Who Smokes Manilas?

The salesmen should be instructed to pass along to the retailer some pertinent facts about the Manila trade. Where they are made, how they are made, and the character of the tobacco.

Some men must have their heavy Havana. Others want the Havana toned down with some light domestic tobacco. And the retailer is going to find a lot of smokers who will appreciate having their attention called to the "mild Manila."

Nature fashioned the "Chain-Smoker" for the Manila trade. And the old fellow who used to kill off ten or a dozen a day, but is now down to three, will be grateful to know that he can hit on all six cylinders if he confines his smoking to good Manilas.

Most men want mild cigars.

Some, however, prefer a heavy, high flavored cigar after lunch or dinner, but between times they confine their attention to a milder smoke. Their smoking is like eating mince pie. They love the taste of the heavy cigar but they know they can't live on it.

There seems to be a disposition on the part of cigar manufacturers to pay little attention to the "sixth sense" of the cigar smoker. The first thought is to place a cigar before him that looks beautiful. Then if the taste is pleasant, the smell agreeable; if he feels comfortable and his ears are receptive, the maker of smokes persuades himself that he has satisfied the five human senses and that he deserves a niche in the Hall of Fame.

However, there are a lot of cigar smokers in the U. S. A. who are not altogether pleased with claros and light wrappers. At first they thought light colors meant light cigars.

Somehow there is a growing suspicion that the color mark is not strictly honest, and right here is where Mr. Smoker's "Sixth Sense" began to develop.

If he really wants them mild, give him what he wants.

Good Manilas Satisfy Six Senses

Manilas, good Manilas, clean and wholesome and properly promoted will satisfy six senses.

There is one thing about the Manila brand-building proposition that anyone can bank on. The importer who goes in for it must lay all his cards on the table. It's essentially honest! He must protect his brand at all times, and in spite of all conditions.

The cigar must be just what he says it is. The factory must co-operate and put in the quality. The Philippine Government sees to it that it is properly branded and identified as a Manila cigar, hand-made, long-filler from tobacco grown in the Cagayan Valley, Island of Luzon.

Economic Aspect of Sumatra Tobacco and the Operating Companies

Rich Provinces in Medan and Deli Districts of Sumatra Produce an Article of Commerce in Worldwide Demand — Practically in a Class by Itself — Operating Companies Have Grown from Very Modest Beginnings Into Vast Proportions.

By Dr. ARTHUR SELWYN BROWN

WRAPPER tobacco from the rich provinces of the Medan and Deli districts in Sumatra is an article of commerce which is in worldwide demand and which comparatively has to meet with very little competition. In this respect it is almost unique in the tobacco world. The result is that it always brings high prices and the price level shows a rising tendency when surveyed over a series of years. Users of Sumatra leaf have tried to find substitutes, but whether they succeeded or not has mattered little to the Sumatra planters, because they find today that their leaf is as popular everywhere as it ever was. The demand continues pressing, prices are most satisfactory and little new land is being under tobacco crops. The outlook for the future, consequently, is most satisfactory.

The Deli-Maatschappij

The tobacco growing industries rank, after sugar, among the most valuable crops raised in the Indies. These industries are controlled by a few large companies among which the Deli Tobacco Co. is quite prominent. This company was formed in 1869 with a capital of 300,000 florins. It met with almost immediate success and rapidly became one of the greatest tobacco forces in the Orient. It has grown with the industry and was reorganized several times. In 1875, it was registered in Batavia, under the Dutch laws, as the Deli-Batavia Co. with a capital of 15,000,000 florins. The last annual report shows the company owns and is operating 17 tobacco plantations in Sumatra aggregating 110,000 acres, all of which are being cultivated.

The dividends paid by the Deli-Batavia Co. in recent years were as follows:

1898	10	1914	18
1900	43½	1915	70
1905	147	1916	60
1910	61	1917	32
1911	64	1918	38
1912	36	1920	40
1913	32	1921	14
		1922	30

These dividends indicate the profitableness of the tobacco planting and marketing industries in Insulinde. The returns of the other operating companies tell similar stories. The local statistics of crop yields and values also reflect the growing prosperity of these industries.

The Deli Co. in 1869 operated one estate. Its 1870 crop consisted of 1,315 bales representing a total value of 270,000 florins. With intervals of 10 years, the crops amounted to:

Year	Bales	Value
1880	16,339	fl3,150,000
1890	49,952	6,460,000
1901	53,449	9,796,000
1911	66,608	18,628,000
1921	54,476	16,654,500

The 1922 crop, the greater part of which was sold in the last spring inscriptions, amounted to 69,878 bales.

At present the paid up capital amounts to fl 25,654,000 ($10,261,600), reserves florins 21,000,000 ($8,400,000). This company now owns 26 tobacco estates and 5 rubber estates; besides, an interest in Cultuur Mij. De Oostkust, operating 5 tobacco estates and 3 rubber estates, half of the capital of which was supplied by the Deli-Maatschappij. The produce of the Cultuur Mij. De Oostkust, the Senembah Maatschappij, Tabakmaatschappij, Tjinta Radja and Shanghai Sumatra Tobacco Cy., is sold in consignment by the Deli Company.

The Deli-Maatschappij employs about 35,000 Chinese and Javanese coolies, superintended by a European staff of about 250 persons. This number includes the personnel occupied with seed selection on scientific lines in cooperation with the Deli Proefstation (Deli Experimental Station, founded by the Deli tobacco growers), and also the 6 physicians, 6 male and 2 female hospital attendants managing the company's four hospitals.

Sumatra Tobacco Production

The total Sumatra tobacco yields and values between 1910 and 1921 were as follows:

Year	Bales	Value
1910	234,133	$19,630,000
1911	280,704	25,500,000
1912	282,920	24,625,300
1913	251,689	20,500,000
1914	246,543	14,675,000
1915	232,911	26,533,000
1916	237,898	27,405,850
1917	238,281	22,264,976
1918	272,858	24,622,700
1919	144,450	29,675,800
1920	147,388	27,000,000
1921	163,681	26,000,000

Tobacco occupies the first place among the numerous important exports from the East coast districts of Sumatra. Its contribution to the export returns averages over 45 per cent of the total returns. Rubber is its only rival. The recovery of production since the war has been rapid. Today, planters are cropping more land than ever before in anticipation of large demands for Sumatra tobacco as the world's economic position improves.

In 1918 the Sumatra producers, in view of the disturbed commercial outlook, decided to curtail the 1919 and 1920 crops. A normal crop in Sumatra amounts to about 250,000 parcels, each weighing 150 half kilos. The 1919 crop produced 150,000 parcels, or only a little more than half the ordinary crop. A crop of 283,000 parcels of high grade leaf was realized in 1920. But much tobacco from the 1915-19 crops remained unsold in the Amsterdam warehouses. The problem was to get this into the hands of consumers without disturbing prices. An effective plan was forthcoming and executed.

An interesting group of pictures illustrating a number of the many operations performed in connection with the tobacco industry on the Sumatra plantations of Deli My., from the transplanting of seedlings in the fields to the preparing of bales for shipment to New York.

An association, known as the "Second Hand," was organized to purchase the tobacco and to dispose of it to German manufacturers on easy credit terms. The Germans gladly took it all and left the market clear for the 1921 and 1922 crops.

The German demand for Java and Sumatra tobacco continues good but trade is now restricted, because the Germans cannot pay cash for large commitments, and Dutch dealers are not ready to sell tobacco on credit. The result is that German cigar manufacturers are compelled to buy in small parcels and the Dutch brokers who cater to this trade must hold large quantities of leaf in storage.

The principal operating companies in Sumatra at present are the following:

	Capital (in Florins)
The Deli-Batavia	9,000,000
The Deli	25,600,000
The Holland-Deli	1,000,000
The Holland-Sumatra	1,000,000
The Netherland-Langkat	500,000
The Oostkust	30,000,000
The Rimboen	1,700,000
The Senembah	10,500,000

Many companies whose names were long familiar in the world's tobacco markets have been absorbed in recent years by one of the above-named companies. There has been a strong movement throughout the world to monopolize tobacco in its various forms and the Dutch growers have followed the fashion.

The price movements, crop returns and values of the Sumatra tobacco crops since 1864 are as follows:

Sumatra Tobacco Statistics, 1864-1921

Year	Bales	Dutch Cents per ½ Kilo	Value in Florins
1864	50	48	4,000
1870	2,868	128	450,000
1880	64,965	112½	11,250,000
1890	236,323	72½	26,000,000
1900	223,731	111½	38,000,000
1910	234,132	131	47,800,000
1919	144,469	303	68,300,000
1920	153,000	284	64,000,000
1921	165,000	194	50,000,000
1922	152,000	...	48,000,000

The extraordinarily sound basis of the Sumatra tobacco-growing industry is well shown by these statistics. With a shipment of only 50 bales in 1864, exports have steadily increased until, just before the war in 1914, they advanced to 246,543 bales.

Discovery of Sumatra Wrapper Values

The value of Sumatra wroppers was discovered by American cigar makers in 1870. From that year until today American imports of Sumatra wrappers has cumulatively increased and, today, the United States consumes the largest portion of each year's crops. Since the conclusion of the war in 1918, there has been a restriction of production because of the poor economic outlook in Europe. Prices, however, have been maintained, properties have been improved and the producing companies are ready to respond to demands made upon them. There is little doubt that as soon as the world's economic state is restored to normal, there will be a greatly increased production of tobacco in the East Indies and the statistics will quickly show greater activities than any of those, between 1900 and 1914, which covered the most prosperous years of the industry.

Amsterdam continues the chief market for Sumatra leaf. It is the center whence the ancient Dutch East Indies Co. operated, where the merchants who succeeded it reside, and where the present operating companies have their main offices. The organization and methods of commerce now exert a great influence on the direction and extent of foreign commerce. Those mercantile houses which are most intimately in touch with the sources of any given raw material are in the best position to control the industry. The large tobacco houses of Amsterdam own the Sumatra tobacco plantations, finance the crops and the marketing of the produce. They, consequently, not only control the price, by regulating the number of bales marketed annually, but, in a large measure, control the industry and enable Amsterdam to exert a supremacy in the tobacco market.

The values of the shares of the chief operating companies are still nearly a hundred per cent lower than the high prices attained before the war. During the past three years there has not been much active trading in these shares. The chief financial newspapers in Holland only quote the prices of three of the companies—the Deli, Deli-Batavia and the Senembah. The shares of all the companies are closely held by owners in Holland and England. They know that the present market quotations do not represent the intrinsic values of the shares and do not readily part with them.

Business Penalized by Poor Political Economy

The commercial depression which has been weighing so heavily upon Holland and the rest of Europe has caused the leading business men there to give more attention to the study of economics and commerce. They are beginning to realize how tariffs and bad systems of taxation hamper and curtail trade while raising wages and commodity costs and prices. Where nations pursue a general policy of mutual suspicion they try to isolate themselves and institute policies of protection. Then fear of aggressive intentions engendered by the protective tariffs drives the nations to military and naval expenditures far beyond their means. Other fears lead to the commission of other equally uneconomic acts. Such countries, while securing the desired isolation, are enfeebled, and quickly become the scenes of strikes, labor troubles and social discontent.

Holland has favored protection and both at home and in the colonies has enacted many unwise taxes. Now that trade is hard to move, the hardship caused by such uneconomic political restriction is disclosed and resented. Today, the leading economic and commercial authorities in Holland are advocating a revision of taxation and a return to free trade. The statement of the Chairman of the Banque Nationale de Belgique, regarding the bad effects of protection, is being quoted by Dutch financial writers who are endeavoring to correct the faults of the taxation authorities. The statement reads: "A detailed study of the causes of the existing trade depression, the very events themselves, show more clearly every day the intimate economic solidarity that unites all civilized trading nations in spite of the greatest political and social divergencies.

Commercial Suicide

"A nation cannot live on itself. Many have tried this only to find that international exchanges are indispensable for a sound financial and commercial development. Isolation and tariff walls may blind for a while; but inevitably there will be a rude awakening to the bad effects of such follies. A nation with dear money which surrounds itself with a high tariff wall commits commercial suicide.

"By levying prohibitive taxes on exports in a country with a depreciated currency, you reduce their exchange capacity and at the same time hamper the expansion of the foreign trade of countries with a sound exchange. In spite of these truths we see everywhere nations allowing themselves to be drawn into these vicious circles."

The Chairman of the Netherlands Bank in referring to the foregoing statements wisely pointed out that a pronouncement in a country like Belgium, which had suffered too much through the war, should act as a touchstone to keep all economists fighting for the adoption of the sound and proved principles of economics. He showed that in every country stress is laid on the need for increasing exports by means of hard work. Customers in other countries are necessary to consume our surplus supplies. Such customers can only purchase from us when they are allowed terms. These terms can only be granted on an exchange basis by exchanging their goods for ours. Only a small amount of international trade is settled in gold. The firm basis of all trade between nations is exchange of goods or barter. The freer the flow of goods between one country and another, the richer will each country become; and the more obstacles raised in the path of free trade, the poorer and more disorganized must the protected country become. These are elementary facts; but only the very wise perceive their great force.

The Dutch expert made these illuminating remarks: "We are at the present time not so much in the presence of a problem of overproduction as of under-consumption; large markets for commodities are greatly impoverished, or have practically disappeared. These markets must be again nursed until they become consumers, as formerly, and if it cannot be accomplished in any other way, by helping them to become good debtors by means of well-considered credits. That is the great problem with which we are faced and to solve which all nations must put their shoulders to the wheel. We should strive for prosperity not only in our own country, but co-operate in creating it in neighboring ones. The solution of the problem of the reconstruction of Europe cannot therefore be brought about by the recovery of Western Europe alone; it embraces in no less degree the recovery of Central, Eastern and Southern Europe."

The tobacco men of Holland fully appreciate the truth of this advice. Since the conclusion of the war they have been in a position to supply Germany and other neighboring countries with the tobacco they so much need; but the problem of prices and credits prevented or hampered trade. They have reflected and very few of them today would undertake to listen quietly to a plea for protection.

The Dutch business men may not be able to make foreign politicians see the fallacies of protective trade restriction and taxation, but they can make their own statesmen pursue a wiser course than hitherto. They are now striving for a revised taxation, greater freedom of trade and more liberal financial policies. When these are finally adopted they will quickly be reflected in the tobacco statistics by greater production and greater export sales.

"LA YEBANA" CIGAR FACTORY A-4-331

11 WATER ST., New York, N.Y.

The steadily increasing demand for our Cigars made it necessary to considerably increase our production.

The above illustration shows our new factory building, which we have occupied since January 1, 1922. It is one of the finest Cigar factories in Manila, if not in the entire world. The building is especially constructed for the manufacture of high grade cigars. On account of the unusually large number of windows, the entire interior is especially bright and cheerful. No expense has been spared to install the most up-to-date equipment. Special features are: Our new sterilizing apparatus, operated by the power of our own electric plant; drying devices; assorting and grading arrangements. The finest sanitary conditions prevail throughout the entire factory.

We specialize in cigars for the United States market. All cigars shipped are strictly handmade.

We use nothing but long filler of the choicest Isabela and Cagayan leaf, grown partly on our own plantation, which comprises more than 4,000 acres of rich soil in the famous Cagayan Valley.

STANDARD 5c CIGAR VALUES

All Long Filler

Handmade

Mild and Aromatic

We concentrate on a few sizes especially adapted for the discriminating American Smoker.

Our Brands are firmly established and successfully distributed by the leading jobbing Houses from Coast to Coast

BECAUSE we give **QUALITY** and **SERVICE** at moderate Prices, leaving Jobbers and Dealers substantial Profits.

We sell to direct Importers only and fully guarantee our cigars.

Expansion of the Cigar and Tobacco Industry in and Around Manila

Cigar Making Is Most Attractive and Interesting Industry in the Philippine Metropolis—Assumed Importance in 1780—Tobacco Culture Dates Back to 1578—Modern Plants Use Efficient Methods—Excellence of Manila Cigars Generally Recognized.

By DAVID FRANKLIN MORRIS

MOST attractive and interesting industry in the Philippines is, undoubtedly, the Manila cigar manufacturing business. Cigar making began in that city as an important industry in 1780, a quarter of a century before a cigar factory was established in Cuba.

Tobacco culture in the Philippines dates back to 1578. That year, in La Union province, a batch of tobacco was grown from seed brought from Mexico, by Padres Gomez and Sebastian. According to tradition, Padre José Garcia, a Spanish missionary, who won the gratitude of the natives by killing an immense, man-eating crocodile, was the pioneer tobacco grower in the Cagayan Valley. He had Cuban seed and succeeded in producting superior leaf.

The Spanish authorities in the Philippine Islands, in 1781, made a government monopoly of the tobacco industry.

First Shipment to America

The first shipment of Manila cigars to the United States came to Salem, Mass., in 1818, on the ship Pequot, which successfully fought a fleet of five pirate junks in the China Sea.

From the Philippines to this country, many Manila cigars and cheroots came, rather regularly, in succeeding years. Until the close of the Civil War, Manilas were imported cigars commanding the highest price in American cigar stores. The high tariff law enacted in 1866 operated to stop imports.

Carried Choice Tobacco Seed

Banished from the Philippines in 1862, "because of disrespect to the head of his family," Lim Tiaco, a young Chinese, went to the East Coast of Sumatra. With him, he carried some choice tobacco seed from the Cagayan Valley. From Lim Tiaco's Philippine tobacco seed the Sumatra tobacco industry started.

Though unfair and oppressive to growers, the Philippine government monopoly was associated with the production of numerous crops of remarkably good quality. The monopoly continued for more than a century. In 1883, the Philippine industry was reorganized and private capital established the cigar manufacturing business that endures to this day.

American Purchases Increase

The American occupation of the Philippines in 1898 did not result in free trade between the Islands and the United States until 1909. Since then, Americans have been buying Manila cigars in commercial quantities and this trade is now rapidly expanding.

The Oriental countries were the earliest to pay tribute to the excellence of Manila cigars. Today Japan and China Manila cigars are preferred; in India and Austria, the finer sizes, sharing favor with Havanas, are sold for practically the same prices. In the expensive hotels of Egypt which shelter many rich visitors during the tourist season Manilas and Havanas are kept on sale side by side. The Manila cigars most popular in Cairo retail for from three to nine piastres, which is equal to from 15 to 45 cents each in American money.

In Barcelona, the Spanish city which has the greatest trade with Cuba, Manilas considerably outsell Havanas. In Marseilles, the chief French port on the Mediterranean, the stranger seeking a good cigar is advised to buy a Manila. In the gold fields of South Africa a good Manila is considered a fair exchange for a shilling. Scattered over the globe, from Vladivostock to Damascus, from New Zealand to Klondike, Manila cigars, more than any other product of the Islands, have made the Philippines favorably known.

Fame Long Established

The fame of Manila cigars dates back to the olden days when the Viceroy of Mexico was Overlord of the Philippine Islands. From Cuba, dauntless missionaries willing to lose their lives in pious service yet indisposed to deprive themselves of the consolation obtainable from good cigars, took tobacco seed. Proceeding to Vera Cruz, thence making a tiresome journey on mule back across Mexico, eventually they reached Acapulco. There embarking on a slow-sailing galleon, they drifted and tossed until, after a voyage of 287 days, they came to Manila. Being explorers as well as preachers, Padres Gomez and Sebastian associated an investigation of the new country with their efforts to convert the natives. In what is now the province of La Union they planted the first tobacco in the Philippines.

Though much tobacco is still grown in the province of La Union, it was ascertained, years after the padres succeeded in their experiment, that the district in the Philippines best adapted to the production of tobacco was the upper part of the Cagayan valley. This celebrated "tobacco belt" in Northern Luzon, is nearly 160 miles long and in width varies from two to fourteen miles.

"The Gift of the River"

The land producing the most tobacco is inundated annually to a depth of from five to 50 feet. As the river subsides after the great flood every year, rich sediment, from five to 12 inches thick, is deposited on the land. The soil thus renewed is unusually fertile. On one field in the Cagayan section, good crops have been grown for the past 132 years, without interruption, The only fertilizer ever applied was "the gift of the river." The so-called "second class lands," higher up the slope, are uninundated except in years that an unusually heavy rainfall occurs.

The chief Philippine tobacco belt stretches over parts of two provinces, Isabela and Cagayan. Whether originating in Isabela or Cagayan, the leaf grown in the valley of "the Nile of Luzon" is preferred to other Philippine tobacco as the product of Vuelta Abajo is placed above crops raised in less famous districts of Cuba.

Principal Tobacco Provinces

According to the area of land devoted to tobacco production, the Philippine provinces rank as follows: Isabela, Cagayan, Pangasinan, Cebu, La Union.

The tobacco grown in La Union, Pangasinan and Cebu, though not so desirable for cigar purposes as the yield of the Cagayan valley, is of commercial importance, being largely utilized in the manufacture of cigarettes. While tobacco of sorts, and in quantities to meet local consumption, is grown in most parts of the Archipelago, the crop, outside of the five provinces named, has little or no significance, commercially.

Much Undeveloped Land

The area of all the land in the Philippines ultimately available for the production of merchantable tobacco is said to be much larger than the combined tobacco districts of Cuba, Porto Rico, Connecticut and Pennsylvania. But, even in the Cagayan valley, there are large tracts of undeveloped tobacco lands. Isolated by two ranges of mountains, the sparsely populated Cagayan valley fails to develop its principal industry more rapidly because, among other reasons, the navigation of the Cagayan is uncertain.

On the upper reaches of the river, during the season when their services are most needed, the light-draught river steamers are likely to be caught on sand bars. Getting freight from Isabela to Aparri, the port near the mouth of the river, where the ocean-going steamers stop, is no easy task.

Some Compensating Advantages

Though difficulties incident to river navigation are impediments to progress, tobacco growers in the Cagayan valley have compensating advantages. Because the cost of labor in preparing the sediment land is reduced to a minimum, really good leaf for cigar purposes can be produced rather cheaply. But labor is becoming far more expensive. Where primitive methods are employed the average Philippine tobacco crop is 600 pounds per acre. Approximately 80 per cent of the tobacco grown in the Cagayan valley is raised by owners of small tracts of land.

Natives Always Interested in Tobacco

The natives have always been interested in tobacco culture. Recent researches indicate that tobacco of fine quality was raised in the province of Cotabato more than two centuries ago probably by the Tiruray wild tribe, a timid hill people who today are raising the best tobacco grown in that district because they give it more care than the Moros do. It has been practically determined by experiments made in the Cotabato valley that the region is capable of producing tobacco equally as good as the best grown in the islands.

It is also believed, from the quality of the leaf tobacco taken off at the experiment fields, that wrapper to substitute Sumatra wrapper can be grown extensively in Cotabato, as extensively as the Philippine demand requires, as not only on the lower levels, but on hillsides also, rich soil of varying grade is abundantly available. There are very sandy loam soils suitable for the production of fine wrapper, and heavier soils for coarser tobacco.

Five Successful Varieties

A minimum of clearing is required in opening agricultural lands in Cotabato, which is essentially a prairie region, well watered throughout the year. Five varieties of tobacco have been proved to thrive there. There seems to remain no doubt that Sumatra tobacco would thrive. There is no worm pest and diseases are not bad, because the country is new and largely uncultivated.

The growers and manufacturers of Manila tobacco are raising and manufacturing a superb tobacco. They are operating with ample capital, modern plants and efficient methods. The excellence of their cigars is now generally recognized wherever choice cigars are smoked. Great has been the success of the Manila cigar factories in the past, the future promises to hold out wider markets, a greater place in the existing markets for their products and much more prosperity than before. The care taken in the culture of the tobacco crops, the curing of the leaf and the manufacture of the cigars is now bearing fruit.

A symposium of pictures delineating a large number of the numerous attractive scenes found on the large tobacco estates in Sumatra and Java. Here are illustrations showing quaint and more modern structures used to house the tobacco brought from the fields, some of which are also shown. The picture in the upper left corner shows the loading of tobacco on a ship to supply the world wide demand.

The Great Care Taken in Connection With Tobacco Transportation

The Fine Cigar Wrapper Leaf from Sumatra and Java Require and Receive Expert Handling—Every Precaution Taken to Prevent Damage to the Valuable Cargoes—Loaded and Discharged in the Most Skilful Manner—Various Interesting Notations.

By J. J. GUNTHER-MOHR

EVERYBODY connected with the tobacco trade knows the fine wrappers coming via Holland from the Dutch East Indies, especially from the islands of Java and Sumatra.

Much has been said at various times about the growing, treating and sale of the leaf, but as far as we know no one has ever written a word about the transportation, handling of the bales of tobacco in Amsterdam and Rotterdam, ere the precious product is ready to go forward to the United States of America.

The firm of N. V. Blaauwhoedenveem-Vriesveem, established in 1616, has, since the first importation started to arrive in Holland, paid special attention to the handling, storing, and packing of these tobaccos, and others arriving in the ports of their establishment.

The Familiar Square Bales

The Java and Sumatra tobaccos, packed in the well known square bales covered with matting are shipped from the Dutch East Indies to Holland on the steamers of the Stoomvaart Maatschappy *Nederland* and the *Rotterdamsche Lloyd,* pay special attention to the stowage of these valuable cargoes in order to prevent heating and damage to the contents of the bales.

The bales are loaded with special care, and on arrival in Amsterdam and Rotterdam discharged over the side in lighters with equal caution.

Marks Segregated

The various head marks are stowed as much as possible together and kept so during discharge in the lighters, which are under constant supervision of the customs officials. The lighter being loaded moves promptly to one of the warehouses specially adapted for the storage of tobacco belonging to the aforenamed organization, where the real work of ascertaining the actual weight of each bale mark and counter mark takes place; all damage is here reported, and the storing is done in accordance with the packing lists received from Java and Sumatra.

All work is under Customs supervision and the authorities are supplied by the company with a guarantee for the payment of the full duty due the Government.

Complete Information Provided

After all the bales have been stored according to their marks and counter marks, complete reports are drawn up and sent to the importer who instructs his brokers to examine the damaged bales in conjunction with the insurance and warehouse company, so that settlement of the claim may be obtained in the regular way. Careful record is kept of all the damaged bales which are marked by the warehouse company, so that later when the sales have been made they may be known to the buyer and allowance made for the damage sustained.

Drawing Samples

The importer having decided to place his lots on the customary subscription sales, requests his broker to prepare the booklets for the tobacco brokers and storage company. As a rule about eight to eleven brokers are present when the sampling is done. the storage company takes care that there is light room, so that the tickets bearing the marks and counter marks besides twine, and men are ready at the agreed hour. The men will bring forward about 10 per cent of each lot and assist the brokers in drawing the samples, which, of course, has to be done with the utmost care in order not to damage the tobacco. The bales are promptly closed and the samples weighed, so that an account can be given to the customs authorities and the importer when the bales are withdrawn from the bonded warehouse. The oldest of the brokers present draws from the bales the bundles packed in the specially provided sampling layers, and hands them to the others for division in accordance with the number of samples needed. All the samples are provided with tickets bearing

No. 1.—Storing Java and Sumatra. 2.—Repacking, pressing and weighing Sumatra and Java tobacco. 3.—Storing Java and Sumatra tobacco in Amsterdam in one of the warehouses of the N. V. Blaauwhoedenveem-Vriesveem. 4.—Loading Sumatra tobacco for shipment to America. 5.—Removing broken leaves from bales of Sumatra and Java destined to America.

full description of marks, counter marks, and length of the leaves, etc.

Disposition of Samples

It is customary for three samples of Java tobacco, and six to seven samples of Sumatra tobacco, to be kept by the N. V. Blaauwhoedenveem-Vriesseveem, of which at least one sample remains in their possession until the sale is made, the other samples being used for exhibition before the subscription sales.

Great Care Given Tobacco for America

Tobacco destined for shipment to America is handled with extreme care and repacked. The duty in the United States of America is assessed on a weight basis, so that it is of the greatest importance that only undamaged leaves arrive at their destination. This necessitates that every bale which has been bought for America be opened with caution, examined carefully, and all broken or damaged leaves removed, and in some cases, when bales have been severely damaged in transit, entirely repacked. After the tobacco has been carefully gone over by expert workmen it is packed in parchment paper, which is covered by the matting in which the bale arrived, or a new one as the case may be. Parchment paper is used to prevent damage by rubbing of the packing and at the same time is an excellent preventive against various odors penetrating the tobacco. The packing is put around the tobacco while it is under the press; and also, while under pressure the matting is properly sewn. After the bales come out of the press they are corded in order to prevent movement of the matting. If the tobacco is of a very fine quality and high price, the bales are again wrapped, this time in linen; and the very best tobaccos are placed in patented cases which carry on the outside the same head marks and counter marks, gross and net weights of the tobacco bales, inside.

It is therefore clear that every precaution is used in order that the valuable leaf tobaccos arrive at destination in first class condition.

The men employed are thoroughly experienced and have been trained for years in the handling of this product so that they are highly efficient.

American Tobacco Exports and Imports

Tobaccos from America are handled in large quantities and stored according to orders from importers or exporters as the case may be. The warehouses where the various kinds of tobacco from the Dutch East Indies, America, Egypt, Turkey, China, Brazil, etc., are stored are specially adapted and careful attention is paid to the storage, temperature, etc.

Tobacco in bales are retiered at regular intervals in order to prevent damage and to avoid too much pressure on the bottom bales.

Everything possible is at all times done to take proper care of the merchandise.

The Great Development of the Tobacco Industry in the Philippines

Inhabitants Smoked Native Tobacco from Earliest Occupation by Man—Pious Missionaries Were Pioneers in Proclaiming th e Merits of Tobacco Grown in the Islands —Manila Cigars Early Regarded as Regal Panaceas for Every Grief and Trouble.

By HERBERT J. LAUGHTON

OLD ACCOUNTS show that the natives of the Philippines, like those of other islands of the Indian seas, smoked the cured leaves of local tobacco plants since the earliest occupation of the islands by man. It was the Spanish missionaries, however, who introduced Cuban seed and raised the fine types of tobacco which have made Manila famous as a producing center for high-grade cigars. In the sixteenth century the good priests who had experienced the delights attained when smoking Havana cigars, tried to supply themselves with similar cigars when they were sent on missions in the Orient. They thus became the tobacco pioneers in Asia and sowed the seed in many corners in the Orient where mankind is now reaping rich rewards. Their tobacco growing experiments in the Philippines were immediately successful. They were soon able to realize that Manila cigars were real gifts of the Gods. The regal panaceas, for grief and trouble, a true product of beneficient Nature developed for the general delight and charming of mankind. The Manila leaf resembled its ancestor in Cuba and it was modified by different conditions of soil, climate and culture, so that it excelled in mildness and smoothness of flavor and in a distinctly individual aroma.

An Early Monopoly

In 1781, the Spanish government, anticipating a world-wide demand for Philippine tobaccos as their excellencies became known announced its claim of rights to the production and sale of tobacco. A governmental monopoly of tobacco, embracing every feature of the trade in the Philippines, was established in 1783. This monopoly was held by the Spanish government for a whole century and was not abandoned until 1883.

The monopoly was the chief source of governmental revenues and the Spaniards, naturally, took care to see that their cultural methods were sound. The tobacco produced by their agent was always of considerable excellence. But when the monopoly was discontinued, the native growers became careless, and the quality of leaf declined. The Payne Tariff bill in 1909, admitting Philippine tobacco into the United States, was another factor acting adversely upon the quality of local leaf. The extension of the market caused growers to increase the areas cropped with tobacco, and they were careless in the matter of seed selections.

To Restore Good Name and Fame

The keen competition of growers, the inefficient methods of exporters of Manila cigars and leaf, led to such a chaotic condition of business, that the Insular Government was called upon to act, so as to restore the good name and fame of Manila tobaccos. In 1916, a law was passed "to improve the methods of production and the quality of tobacco in the Philippines, and to develop the export trade therein." This law was at once effective and has been of the greatest advantage to the Philippine trade. Already the Manila cigar enjoys an esteem in the world's markets as great as it ever did, and the foreign sales of Manila cigars are greater than they ever were, and are increasing with extraordinary rapidity.

Leaf Exports

The exportation of Philippine leaf tobacco to the United States in 1916 amounted to 1,267,542 pounds. It amounted to 5,914,528 pounds in 1918, and 7,400,000 pounds in 1922.

The exports of Philippine tobacco to the United States in recent years were as follows:

1914	41,376 lbs.
1915	78,274 "
1916	1,267,542 "
1917	6,567,214 "
1918	5,914,528 "
1921	6,800,000 "
1922	7,400,000 "

The European war created a renewed demand for Manila cigars and the American import statistics indicate that the cigars appealed to the popular taste. The imports, almost every year, show a good growth upwards.

The Insular Bureau of Agriculture is doing a great work in uplifting the culture of tobacco in the Philippines. The tobacco grows well all over the islands. The principal crops are sown in the following provinces: Abra, Agusan, Albay, Ambos Camarines, Antique, Bataan, Batanes, Batangas, Bohol, Bukidnon, Bulacan, Cagayan, Capiz, Cavite, Cebu, Cotabatu, Davas, Olocos Norte and Sur, Iloilo, Isabella, the leading tobacco province, Laguna, Lanao, La Union, Leyte, Mindoro, Misamis, Mountain, Neuva Ecija, Neuva Vizcaya, Occidental Negros, Oriental Negros, Palawan, Pampanga, Pangasinan, Rizal, Samar, Sorsogan, Sulu, Surigao, Tarlac, Tayabas, Zambales and Zamboanga.

Inspected by Experts

The tobacco grown in those provinces is inspected by experts and the Bureau of Agriculture is conducting a five year testing experiment, chiefly in the province of Isabella, aiming at:

First. Isolation by selection of the highest grade strains from local plant varieties.

Second. To obtain by constant testing, tobacco strains of the best hereditary value.

Third. To distribute selected seed among all the local growers of tobacco crops.

Fourth. The production of a standard cigar wrapper leaf by: *a.* Seed selection; *b.* Cultural methods; *c.* Hybridization; *d.* Acclimatization of foreign wrapper tobacco.

Fifth. Constant testing of wrapper strains.

Sixth. The control of tobacco plant pests.

Seventh. Curing experiments.

Eighth. The co-operation of experts and growers in the solution of tobacco cultural problems.

Excellent Experiment Work

The tobacco experiment station is also doing excellent service in promoting the above objects. This station's experts have discovered by their experiments that the province of Neuva Vizcaya possesses soils and climatic conditions similar to the famous Isabella province, and has large areas adapted to tobacco culture.

Although tobacco culture is undertaken throughout the Philippines, the local governmental authorities limit the manufacture of Manila cigars to those leaves produced only in regions peculiarly suited for the production of a high grade cigar tobacco. The Cagayan Valley corresponds to the Vuelta Abajo of Cuba. Tobacco grown there and in parts of Isabella province is among the finest of the world's tobacco products. The local experts are striving to raise the standard of the tobacco crops grown in the other provinces to a similar high plane.

Deserved Attention Given to Seedbeds

Much attention has been given by the Government experts to the tobacco seed beds, because it is recognized that in the Philippines more so, perhaps, than elsewhere, the fate and quality of a tobacco crop largely hangs on a good lot of sturdy seedlings. Experiments have clearly shown that:

First. Shade is necessary to prevent evaporation.

Second. Cloth is the best shading material.

Third. Plants in shaded beds sprout earlier

and are healthier than in unshaded beds.

Fourth. Different shading materials exert different effects upon the sprouting plants.

Fifth. The unshaded controls showed not only poor and late germination, but a very stunted growth.

Soil sterilization experiments showed that:

First. Damping-off diseases are due to fungi.

Second. Excessive moisture, shade and thick planting favor fungi diseases.

Third. Lime and dried blood fertilizers favor fungi diseases.

Fourth. Soil sterilization and disinfection reduces the effects of damping-off. Many methods of sterilization were tried. The best results were secured by treatments of the soil with 1-50 and 1-75 formalin and 1 per cent of copper sulphate. Hot water, and roasting the seed-bed soil on a pan gave good results also.

Fifth. Sterilization of the soil by hot water, roasting, burning, firing and pan frying proved very satisfactory.

Sixth. It is certain that damping-off can be controlled by any of these methods of seed-bed sterilization.

The Departmental experiments with fertilizers proved that the germination of tobacco seeds is hastened by the application of suitable fertilizers and the use of shades on the seed beds. Chicken and horse manure, and the usual chemical fertilizers, are valuable agents of the Philippine tobacco grower.

Played Important Role

The Compania General de Tobaco de Filipinas played an important role in the early development of the Philippine tobacco industries. The company was organized in 1883 with a capital of $2,500,000. It built a modern factory for the manufacture of cigars and cigarettes in Manila known as La Flor de la Isabela and has established a world wide reputation for its numerous brands. It purchased the principal part of the Philippine crop after the abandonment of the Government tobacco monopoly and acquired large tracts of tobacco lands which it has since brought to a fine state of cultivation.

The success of the Compania General, from 1884 onward, induced numerous companies to engage in the manufacture of cigars. But, from the termination of the monopoly to the outbreak of the Spanish-American war, most Manila manufacturers found Governmental conditions adverse, and local troubles handicapped commerce. Yet, however the times were, they kept at work. The Spanish-American war, the Philippine insurrection, and the re-organization of insular affairs by the United States in various ways affected Manila factories. But, as order slowly was brought out of chaos in the provinces, larger quantities of better tobacco were produced and the output of cigars increased year by year.

Decrease Shown

The showing made in 1914 would indicate a serious decrease, as only 65,140,000 Manila cigars were shipped to the United States that year, the trade really gained because the principal, in fact practically all, shipments comprised cigars of a higher grade. The inferior goods which formerly injured trade were largely, if not entirely, eliminated. In 1914, actually more good Manilas were smoked in the United States than in any previous year.

Statistics Show Growth

The growth of the Philippine tobacco industry is clearly brought out by the following official statistics.

Fiscal year ended June 30	Consumed in the Philippine Islands.	Exported to foreign countries.	Shipped to United States.	Total.
1906	74,184,537	94,110,336	231,206	168,526,079
1907	79,476,459	117,684,485	82,175	197,243,119
1908	82,986,278	115,738,939	29,570	198,754,787
1909	86,800,520	116,981,434	867,947	204,649,901
1910	89,272,890	109,006,765	87,281,673	285,561,328
1911	96,115,525	104,604,170	27,531,596	228,251,291
1912	109,924,014	104,476,781	70,518,050	284,918,845
1913	96,193,811	106,563,541	102,894,077	305,651,429

Recent returns show that there were 521,120,653 cigars made in Manila in 1920, of which 321,000,000 were exported to the United States, and the balance were chiefly consumed in the Philippines and adjacent countries.

The total export of cigars in 1920 was 414,603,650, which, compared with the 321,000,000 sent to the United States, shows that the American market consumes 75 per cent of the cigars made in the Philippines for export. The second big field seems to be China and the third Australia. Europe takes a great deal of leaf tobacco in normal times; the United States, too, has found uses for Philippine leaf tobacco, which also goes to points in the Orient and Australia.

In 1920 the production of cigarettes was more than five billion. The bureau of internal revenue does not report the total production of leaf tobacco but gives the total amount of leaf tobacco exported as 23,683,995 kilos. Only 128,663,141 cigarettes were exported; cigarettes made in the Philippines are consumed in the domestic market chiefly. No particular effort is made to market them abroad.

Cigars in Native Wood

Philippine cigars are packed in boxes made from a native wood which has no superior for this important industrial purpose. The wood is light and strong, of a dull red-brown color and easily worked. It has a pleasing aroma which is imparted to the cigars packed in it.

The local name of the wood is calantas (*T. Calantas* Merr. & Rolfe). This is the wood used by the Tanduay Box Factory, which manufactures a great portion of the cigar boxes used in the Philippines and is in a position to export boxes in any specified dimensions to any market in the world. (Into the United States this product goes free of duty.)

Following is the technical description of calantas:

"Wood soft; light, specific gravity 0.438 (Foxworthy), 0.406 (Pingdulles); sapwood small, pale red, rather sharply marked off from heartwood; heartwood light to very dark red, but most frequently of the color of average Spanish cedar; grain generally very straight, texture fine or moderately coarse, smooth; strong and lasting odor exactly like Spanish cedar; seasons well, except that the thick planks are liable to internal checking if not carefully seasoned; very easy to work. Durability; heartwood practically never attacked by insects when seasoned."

Attained Excellent Reputation

Philippine tobaccos have attained an excellent reputation throughout the world. The effective regulation of the exported products of the local factories made by the Insular Governmental authorities, the skill employed in the fine modern work shops in Manila, and the expert work done in the experimental farms in improving the seed and cultural methods assure the Islands a great future. When production increases, there will be wider markets for the distribution of Manila cigars and there is little doubt that, in the near future. manila cigarettes will be exported to Australia, China, Japan and elsewhere.

Notable Prosperity and Progress of the Netherlands East Indies

During Reign of Queen Wilhelmina Islands Have Become Richest of Dutch Possessions — Population of East and West Indies Increased from 30,000,000 to 50,000,000—Extension of Shipping Industry Most Gratifying Sign of Development

By HENRY C. AMES

NETHERLANDS East Indies have enjoyed unusual commercial prosperity during the past two decades and in the reign of Queen Wilhelmina they have become the richest assets of the Dutch kingdom. In a current review of their progress, in *Holland and Her Colonies*, it is pointed out that twenty-four years ago, when Queen Wilhelmina ascended the throne of the Netherlands, the population of Holland was slightly over 5,500,000, while that of the Dutch East and West Indies totaled, in round figures, not over 33,000,000, making a grand total of 38.5 million Dutch subjects.

Today, as Queen Wilhelmina reviews the progress of her domains after an auspicious reign of a quarter of a century, the population of Holland totals over 7,000,000, while the East and West Indies have increased to more than 50,000,000, making a grand total of over 57,000,000 souls claiming allegiance to the House of Orange.

The above figures, while showing an increase of about 30 per cent in the population of Holland, point especially to the enormous growth within the short period of Queen Wilhelmina's rule, of the population of Holland's colonies, a growth of more than 53 per cent. This growth is confined practically in its entirety to the Netherlands East Indies, whose population is now given as fifty million, of whom only about 150,000 are classed as Europeans (white people of all nationalities), less than 500,000 foreign orientals (Chinese, Japanese, British Indians, etc.) and over 49 millions are natives.

While the increase in the population of the Dutch East Indies has no direct relation to the fact that it has occurred during the reign of Holland's present sovereign, it testifies in an indirect way to the efficiency of an administration under which the native population has been able to register an increase which, under turbulent political and economic conditions and in the absense of hygienic and sanitary regulations, would not have been possible.

Great as has been the increase of the native population in the Netherlands East Indian archipelago, the development, the general progress of the wealthy islands has not lagged behind. This general advancement in the march of civilization has distinctly a direct bearing on the wisdom, the foresight and the care exercised by those whom the Government under Queen Wilhelmina has charged with the administration of this tropical empire.

Insulinde, as the Netherlands East Indies is frequently called, is a conglomeration of native tribes, formerly presided over in fact and even today mostly in name, by native chiefs, to whom the population used to pay tribute in the form of taxes and stipends, leaving very little for the development of the tribal district or for public improvements. All that is changed today. Under the Dutch supervision, public treasuries have been established, as distinguished from the sultan's private purse, into which formerly nearly all the revenue flowed. The ruler now receives a fixed salary, while an annual budget must be compiled to be approved by the Dutch resident. This guarantees a proper share of the natives' taxes for the benefit of the public for general improvements, such as road building, institutions for the aged and feeble, sanitary equipment, etc.

This supervision or control by the Dutch has

Notable Prosperity and Progress

(*Continued from page* 42)

terfalls are being harnessed to furnish power traction and light companies as well as to ve the wheels of many large and small indus-al plants.

During the years of the world war when the ed was recognized of stimulating local indus-es, many native enterprises were encouraged further development, while various new rces of supply have been found with a highly orable reaction on the possible distribution domestic products. A glance at the export tistics of the Netherlands East Indies shows t the last few years practically all large coun-es or dominions are listed among the appre-ciative consumers of the islands' products.

One of the most gratifying signs of the country's development may be noticed in the extension of the shipping industry of the islands. Wherever one goes, one may observe the ships of practically all maritime nations of the globe anchored in the principal ports of the archipelago, intent upon carrying a share of the enormous traffic going to all points of the compass. This development of shipping in the ports of the islands has kept step with the improvement in harbor facilities and equipment, enabling steamers to load and unload with dispatch alongside the quays, where large warehouses and modern cranes give the ports the aspect of modern commercial centers.

With increased production of tropical goods by the native and European enterprises, there comes as a natural consequence increased freight traffic on the railroads, increased passenger traffic, the opening of new districts, the building of new roads. What this has meant to the general prosperity of the islands is reflected by the development of their exports in the course of the last twenty-five years, a development so enormous as to stagger the imagination of the most optimistic. As a single indication of the commercial development of the islands we point to the circulation of bank notes, reported at 52,000,000 guilders in 1898, and today, 25 years later, they total 272,000,000 guilders.

Truly, Queen Wilhelmina may, on the twenty-fifth anniversary of her accession to the throne, point with pardonable pride to the achievement of her reign as reflected in the development of that mighty empire, poetically styled "a girdle of emeralds, slung around the Equator."

Seen in Sumatra: 1—Planting seedlings. 2—Making bundles. 3—Sorting the lengths. 4—Transporting tobacco.

The Governmental Classification of Philippine Tobaccos

The government regulations relating to the ssification of Philippine tobaccos, as amended ril 28, 1919, are as follows:

(*a*) *As to origin.*—The term "Isabela" will ply to tobacco grown in the Province of bela; "Cagayan" to tobacco grown in the vince of Cagayan, and in the same way to-co grown in other provinces will be desig-ed by the name of the province of its origin.

(*b*) *As to length of leaf.*—Within each up there shall be six classes of leaf tobacco; first, second, third, fourth, fifth, and sixth sses. The class of the tobacco, except the th class, is determined primarily by the length of the leaf and secondarily by the soundness and use of the leaf.

First-class tobacco leaf must have a length not less than 42 centimeters; second class, not less than 33 centimeters; third class, not less than 23 centimeters; and fourth class, not less than 16 centimeters. Tobacco leaf less than 16 centimeters will be classed as fifth or sixth class tobacco. A tolerance of one centimeter will be allowed in the lengths of each class, provided that the difference in each hand, or "pinongo," is as aften above as below the minimum herein fixed.

(*c*) *As to soundness.*—After determining the class of the tobacco with reference to its origin and length, its soundness and use will be judged. First-class leaf tobacco must not be more than 5 per cent broken or worm-eaten; second class, not more than 8 per cent; third class not more than 10 per cent. Fourth class, if it has the length of first or second class leaf and be not more than 50 per cent broken or worm-eaten, may be qualified by the word "Superior," but if its length is that of third or fourth and it is not more than 25 per cent broken or worm-eaten, it may be referred to as "Current." Fifth class must be at least 90 per cent sound of any size. Sixth class comprises

Staple Manila Cigars

At one time American Cigar Jobbers doubted the possibility of stabilizing Manila Cigars.

They thought Manila was too far away—that transportation could not be depended on to meet the steady demand of Smokers clamoring for a certain Brand.

But after the War, conditions changed. Better ships, better stowage, and greater care in preparing cigars for the long voyage wrought a revolution in the Manila Cigar Trade.

Staple Manila Cigar Brands are now established in every section of the United States, and the Industry has grown from a speculative business in jobs to a Certain and Sure Investment in a Brand Franchise.

ll tobacco not entitled to a higher grade, and n this class shall be included all leaf which has ot the requisite length of soundness for inlusion in a higher grade class, all leaf which icks aroma, burning qualities or elasticity, and ll leaf which is dirty, musty, moldy, rotted, ried out, sapless, or otherwise spoiled which has een handled under insanitary conditions, or vhich has not been dried and cured in a curing hed constructed in accordance with the specications of the director of agriculture.

(*d*) *As to use.*—First, second, third, and fourth class "superior" Isabela, Cagayan, and Nueva Vizcaya will be further classified under the terms "fine" and "coarse." If the owner so desires, he may further qualify the term "fine" by the terms "claro," "colorado," or "maduro" to indicate the colors of the tobacco, provided these words be truthfully applied.

(*e*) *Definition of "fine" and "coarse."*—"Fine" shall qualify leaf tobacco which is suitable for use as wrapper and its color, texture, and elasticity will be the points principally judged.

"Coarse" shall qualify leaf tobacco which is suitable for use for binder or for filler and for cigarettes. The aroma and burning qualities will be given prime consideration in determining the classification as to use.

(*f*) *Standard for export.*—First, second, third, and fourth class "superior" tobacco from Isabela, Cagayan, and Nueva Vizcaya provinces and first, second, and third class tobacco from other provinces are considered as standard for export to the United States of America and all other countries.

The Peculiar Tobacco Cultural Methods Used in the Island of Java

Growing Conditions Differ in Many Respects from Those Prevailing in Sumatra—Natives Perform Principal Work on Plantations — Tobacco Crops Cultivated Under Supervision of Dutch Residency of Besoeki—Various Types Grown.

By HUGH MILBY

TOBACCO growing conditions in Java differ in many respects from those prevailing in the rich lands of Sumatra, which yield the well-known Sumatra wrapper leaves, owing to differencess of soil, climate and arming methods. Natives, working under European experts, or natives cultivating their wn plantations, raise the principal crops in ava, whereas in Sumatra, Chinese labor is lmost exclusively used in the tobacco indusries.

The raising of tobacco crops in Java is under he supervision of the Dutch Residency of Besoeki, the eastern political capital of the island, nd also under the governors of the Vorstenanden, which includes the provinces of Djokjaarta and Soerakata.

Land tenure in Java, as is shown in a recent report of the Department of Commerce, is held under leases from the native Sultans.

In the Vorstenlanden

The tobacco lands in the Vorstenlanden lie at the foot of the Mirapi Mountain on the south and east of that volcano, with the slope of Mount Lawoe rising on the eastern side. The State Railways and the Netherlands Indies Railways run through the district, and the shorter haul to tidewater at Semarang gives the latter road the bulk of the transportation.

These lands all belong to the Sultans of Solo and Djokjakarta and to their princes, who have leased them to the plantation companies, on terms covering from 12 to 25 years, together with the right to the labor of the native population in exchange for the rice lands which they cultivate. This arrangement is much involved and has been the subject of so much political agitation that the government has enacted regulations forbidding new leases or extension of present leases under this system. Under the new laws the companies pay rent to the princes for the land actually cultivated and pay cash for their labor, while the natives hire their lands from the princes under regulations designed to relieve them of the injustices to which it was claimed they had been subjected. In Besoeki the land is leased from the natives in the same manner that the sugar growers get their land. The local population is employed when possible, and a large annual influx of Madurese gives them a convenient reserve for the rush seasons.

Rotation of Crops

The preparation of the soil begins in April, as soon as the rice crop is off, and is turned back to the natives, theoretically, by January 1. In the Vorstenlanden, under the new regulations, the companies are given a rebate on their land rental, if they turn the land back before that date, and are subject to a heavy fine if they hold it longer. A further strong incentive to finish at this time is the fact that when the lands are held beyond this date the whole cycle of rotation is retarded and the planters will be delayed in putting in their succeeding tobacco crops. This cycle includes one crop of tobacco from April to December and three rice crops requiring from four to five months to mature, making 24 months in all. In Besoeki three crops of rice are not usually possible, and one crop of maize, beans, or other "polowidjo" is raised instead.

System of Cultivation in the Vorstenlanden

The rice straw remaining on the fields is collected and burned.

A main drainage ditch is made around the field, leaving space on each side for roadways. These ditches are connected with the government canal system, or, if the land is on a sharp incline, it is drained into the lower rice field.

Secondary ditches are made 150 feet apart, the full length of the field. These are called the 150-foot ditches.

Between the 150-foot ditches cross ditches are made at an interval of 30 feet, called the 30-foot ditches. The smallest unit of cultivation is a bed 30 by 50 feet, 16 of which make one bouw (1 bouw = 1,7537 acres).

Two systems of soil working are followed. Under one system the land is plowed with a native plow fitted with an iron point to an approximate depth of 6 inches.

As soon as plowing is finished a fertilizer, consisting of cattle manure, leaves, wood ashes and other village waste (no human manure is contained in this fertilizer), is put on the land in a proportion of 24 cubic meters to a bouw (about 18 cubic yards per acre). The supply usually equals the demand. This mixture has about six-tenths of 1 per cent of nitrogen, and a full analysis shows little that will feed the soil. Its peculiarly beneficial qualities are supposed to be in the bacteria which it contains. No artificial manure can take its place, but a combination with sulphate of ammonia produces excellent results when the soil is poor, although on the better soils this manure is all that is required for the best results.

After the fertilizer is put on the ground a 15-inch hole is made in one corner of the field and the soil from the adjoining area is patchoeled* into it, the native working back and forth across the 30-foot width until the section is finished.

No Plowing Is Done

No plowing is done under this system. The 30-foot width is marked off in 3-foot sections. A patchoel depth of soil is taken from each alternate section and laid on the adjoining area, after which the subsoil is worked to a depth of 15 inches. When the soil on the adjoining area is thoroughly dry, it is returned to its original place and the operation is repeated on the other half.

Some estates apply the village manure before replacing the soil, while others wait until leveling off, after which it is turned under to a patchoel depth. This latter system is preferred by many planters, as it is easier to supervise the workmen.

The size of the seed beds is 3 by 10 feet, and for every bouw (1¾ acres) to be planted there are 30 of these beds, one workman taking care of one-third of a bouw, including 10 seed beds, The preparation of these seed beds begins before any other work is done, and by the end of July they are ready for the seed. From 10 to 14 days later all or a part of the balance is seeded, according to the plan for transplanting.

Before seeding, the soil of each bed is given 100 grains of sulphate of ammonia mixed with 100 grains of double superphosphate, or, if it is impossible to get this, with 200 grains of "Enkel" superphosphates. On the poorer soil the use of sulphate of ammonia alone acts as a poison, which is shown in a poorer growth than if none were used.

Transplanting

The first transplanting is done early in September, 35 days after the first seed beds are set out. The young plants are placed 19 in a row across the 30-foot width and 49 rows to the 150 feet of length. Extra plants are put in between the permanent rows for a reserve.

Tobacco grows quickly, and it is most successful when it receives its moisture at the right time. An effort is made to plant a short time before the rains begin so that the root system will be developed before the rains bring on a rapid leaf growth. In order to have a part of the crop reasonably certain to meet these favorable conditions, planting is done in two and sometimes three sections. In the latter case the last planting is either a fifth or a tenth of the whole, as it has the smallest chance of getting the best weather conditions.

Within 15 days of planting the weak or dead plants are replaced by the reserves, and at this time from 4 to 6 grams of dry sulphate of ammonia are given to each plant. This work is done by women, one of whom makes a hole near the plant with a pointed stick, while another measures the fertilizer and puts it in the hole, covering it with soil. No phosphates are used except in the seed beds.

Cultivation

Continued cultivation of the soil is done after the young plants are set, and as they grow the soil is banked against them to stimulate root development.

The only serious pest is the caterpillar. In Besoeki the leaves, while still in the nursery, are given a wash of lead arsenate, which is usually sufficient protection. In the Vorstenlanden the caterpillars are picked from the leaves by women and children.

Sulphate of copper is used to cure root diseases.

In the Vorstenlanden an area equal to the area under tobacco cultivation is set aside for native cultures. The laborer is required to give an amount of time to the tobacco culture equal to that used in the cultivation of rice.

In the Residency of Besoeki the population is largely Madoerese. Men are paid according to their skill in the work they do.

Java Tobacco Grades

Java leaf wrapper tobacco is either consigned to the estates' agent in Holland or sold direct by the estates. American buyers have shown an interest in Java leaf during the past few years and visit the principal centers yearly to make their selections. The "American assortment" contains only the largest leaves of fine texture and light color. This grade is not sold on the Soerabaya market, as it is only grown by the estates under European control. Each estate growing wrapper tobacco has its own trademark, which is recognized in the markets.

American buyers are interested in only the finest of the wrapper tobaccos and practically everything in Java that comes within the specifications of the "American Assortment" goes to the United States, while the balance goes principally to Holland.

Krossak, or scrubs, is leaf tobacco of grades lower than wrapper tobacco. It is most of native cultivation and is graded exactly according to size, texture and color.

"American Assortment"

Grade A A comprises only the longest leaves, including moist and unsound qualities; Grade A, long leaves, with some short permitted, a slightly thicker and darker colors; and grad B B, B, C C and C are graduated in size a quality down to D grades. The minimu length of leaves in these lowest grades, D D a D, is a span. There is no definite limit to t thickness or shade; it is only when the leaves a nearly black that they may be rejected.

Assortments must have 65 per cent up grade, while 35 per cent may be of lower grad Within these grades are many subdivisions, that there are literally hundreds of grad known to the buyers. The above grades a qualified as a whole by the district in which th are grown.

Cut Tobacco

Gekorven is a stripped and cut tobacco us by the natives and when exported goes either Holland or to the near-by oriental countries. is made up of leaves that will not go into t krossak grades to good advantage, but are fairly good quality. It is stripped and cu hence the name "gekorven," meaning cut. The is considerable labor attached to is preparatio which is accountable for the higher price which it is appraised by the customs.

Madoera Tobacco

Madoera tobacco is grown on an island the same name, lying east of Java, and separate from it by a narrow strait. Tobacco fro Madoera stands as high as any in the krossa grades. The superior quality is due to t climate and soil conditions. During the past fe years it has brought better prices than formerl as some of its grades are used for the manufa ture of cigarettes.

Besoeki Residency, including Djember di trict, is the most eastern of Java's politic divisions. The tobacco from this residenc which bears its name, is grown in the lowlan between Mount Raoeng and Mount Argopoe and is among the best of the "scrubs." Beside the native cultivation there are large areas und European control which produce the finer typ of leaf tobacco. An important tobacco proc station is located at Djember, in the center of t tobacco district.

Loemadjang Tobacco

Loemadjang tobacco takes the name of town in the eastern part of the Residency Pasoeroean, which is the center of a tobacc growing district lying at the foot of the sout eastern slope of Smeroe Mountain. The qualit of the tobacco raised here ranks with that Madoera and with the lower grades of Besoek

Malang tobacco comes from the district lyin to the east of Smeroe Mountain, the center which is the town of Malang. The elevation this land is somewhat higher than that on whic the above-named tobaccos are grown. Th quality is poorer, which is undoubtedly partl due to climatic differences.

Kediri tobacco is grown on the lower stretche of the Kloet and Wilis Mountains. It rank with Malang tobacco, among the poorest of th "scrubs."

Rembang tobacco is grown in almost ever part of the residency of that name. The bul of the krossak going through the Soera-bay market comes from this district and is of th lowest grade.

Kedoe Tobacco

Kedoe tobacco is grown on the lower slope of Merapi and Merbaboe Mountains on the eas and Soembling and Sendoro Mountains on th west, in the Residency of Kedoe. Its quality i between that of the first-named group and o those of Rembang, Kediri, and Malang. Th better grade produced here has been attribute to a favorable climate and soil and to better see being used.

In the principalities of Djokjakarta an Soerakarta very extensive cultivation of tobacc is carried on by European-controlled estate operating in an association which maintains proof station with a scientific staff.

*A derivative of the word patchoel," a heavy hoe universally used by the natives in place of a spade, rake or hoe.

The Renaissance of the Manila Cigar

By COLIN M. HOSKINS

rmerly Chief, Division of Tobacco Industry, Bureau of Internal Revenue

There is probably no product of the Philippine lands so well known to Americans as the anila cigar. Tobacco has likewise been a subct of great interest to the local Government nce the introduction of the weed into these lands during the last quarter of the sixteenth ntury by the Spanish missionaries coming here om Mexico. For an entire century the tocco industry of the Philippine Islands was a vernment monopoly, the state having control the production, manufacture and sale of this oduct. In the field there was a chief apaiser, styled "interventor," who had a force of bordinates known as "alumnos aforadores." he chief appraiser set the date when the first ed beds were to be sown and also determined e date of planting and the number of subquent seed beds. The instructions of the Govnment went into considerable detail, going so r as to prescribe the number of times the land ould be plowed, the dates when the plowing ould take place, and the number of plants hich should be set out per unit of land. This pervision was extended to the harvesting and ring of the leaf and its classification into the veral grades. The regulations were enforced y severe penalties.

As was to be expected, under such close supervision, the reputation of Philippine tobacco nd Manila cigars secured an enviable reputaon in the markets of the world, where their ildness and choice aroma were deeply appreated. By 1881, however, the system of Govnment control had become so objectionable to e planters that local uprisings were of conant occurrence. Consequently, in that year, alough the monopoly was the Government's bigest source of revenue, it was completely abolhed.

The planters, freed from the former odious pervision, went to the opposite extreme. Beng no longer forced to work and having very mple needs, they grew shiftless and improvient. Owing to the large European demand for eap tobacco, planters could dispose of their rop, even though poor in quality. Philippine bacco continued on its downward course un- 1 1909, when the Payne-Aldrich Tariff Act as approved, admitting Philippine cigars into e United States, free of duty. This date sigalized a new epoch in the Philippine tobacco dustry. It was anticipated that, with the tariff arrier removed, the entire industry would reeive an impetus which would re-establish it in e world's markets. Through the discussions n the Tariff Bill, the Manila cigar had received ee advertising throughout the length and readth of the United States. The American ublic was really keen to try out this cigar whose ee entry into the United States was so bitterly ought by the tobacco trust. The dealers and onsumers alike expected a cigar equal to the Iavana cigar at a ridiculously low price. Manila xporters made plans for getting rich over-night.

At first it looked as though the renaissance of e Manila cigar was at hand, but very soon disuieting reports came from the United States. Vith no organization of the industry, with unestricted competition, the exporters shipped normous quantities of cigars to the United tates which were unfit for human consumpon. Other cigars of good quality were quickly destroyed by the tobacco beetle. American obbers and dealers who had handled Manila gars suffered heavy losses. The consumers ere disappointed in the product. As a result, ithin two years the Manila cigar was utterly iscredited. The exports fell off steadily for a umber of years, until the end of 1914, when nly 59,000,000 cigars were sent to the United tates.

At that time the Government become genuinely alarmed. The Governor-General sent the Collector of Internal Revenue to the United States to investigate the causes for the slump in the trade and as a result of his report and recommendations, the Legislature, in February, 1916, passed Act No. 2613, the Tobacco Inspection Law which aimed to remedy the conditions brought about by the discrediting of the Manila cigar in the United States.

It has been a long and trying job to reestablish the name of the Manila cigar in the American market, but after 3 years of vigorous campaigning, the Manila cigar industry has won back the place which it held many years ago. It was in 1914, when the Government realized its duty to promote the industry which marked the true renaissance of the Manila cigar. The Government stands behind the Manila cigar and guarantees its quality. The tobacco planters are instructed in proper cultural methods and an experiment station has been established under the joint auspices of the Bureau of Agriculture and the College of Agriculture in the Cagayan Valley. All leaf tobacco is classified and graded before it leaves the province of origin. Factories operate under sanitary regulations which make them second to none in the world in cleanliness. No cigar may be shipped from the Philippine Islands to the United States until it has been inspected by the Government agents and certified as standard. If the cigars so certified, deteriorate within 72 days after arrival in the United States, the Government backs up its guarantee by paying the cost of re-conditioning cigars, or if unmarketable returning them to the Philippine Islands.

The Manila cigar today holds a high place in the estimation of the American smoker. The mildness of the Manila product is its most noticeable virtue. The inveterate smoker appreciates it because he can smoke many Manila cigars without the satiation which would follow smoking an equal number of other cigars. No longer is the Manila article a minor export product. As compared with the 59,000,000 cigars which were shipped in 1914, there were shipped in 1918 to the United States, 265,234,000 Manila cigars. During the last 5 years the growth, while phenomenal, has been so steady, from month to month, quarter to quarter, year to year, that the growers and manufacturers alike feel confident of a permanently increasing market in the United States. As the American smoker is learning to discriminate between the good Manila cigars and the really high grade Manila cigars, the proportion demanded of the more expensive sizes is increasing. The elimination of the Customs duty has given to the American smoker a cigar comparable with the best imported smoke, at a price not exceeding the best domestic smoke. It is this fact upon which the Philippine tobacco industry relies for the permanence of its American market.

A Pioneer Importer

Henry Ottenburg, of 146 Front Street, New York. one of the pioneer importers of Manila cigars, is experiencing an increased demand for the brands he has established in this country, including Ilang-Ilang, La Flor de Luzon and La Emperatriz. These brands are made and packed in various sizes, banded, and in bundles. He guarantees all of his cigars to be sound and sweet and can give immediate delivery, if desired. He is also very particular about protecting jobbers who market his brands in their territory.

Mr. Ottenburg continually keeps in touch with his trade by paying personal visits. He is always ready to take a trip to discuss the handling of his brands on receipt of a request from a customer. He uses the following slogan, "Old friends are welcome and new friends are wanted."

A Brief Description of Some of the Leading Factories in Manil

Co-operation During Past Ten Years Between Philippine Bureaus of Agriculture, Revenue, Commerce and Industry Has Been Beneficial — Quality of Tobacco and Cigars Much Improved — Plants Equipped With Finest American Machinery.

By H. S. LAWRENCE

THERE has been excellent co-operation during the past ten years, between the Philippine Bureau of Agriculture, the Bureau of Internal Revenue, the Bureau of Commerce and Industry, the tobacco manufacturers, growers and exporters in improving the quality of Philippine tobacco and cigars, with the object of enhancing their popularity in foreign markets. The local manufacturers have adopted the latest ideas in factory construction and design and have equipped their plants with the finest American machinery. The result is that the leading cigar factories in Manila will compare favorably in every way with the finest in the world.

Government supervision of factories in the Philippines is just as rigid and scientific as it is regarding the uniform excellence of leaf used and in manufactured product before it is permitted to leave the factory. The factories are perfectly designed for sanitation, light, ventilation and suitability for working conditions. The hygiene of the men and women employees is thoroughly attended to by the government authorities.

Compañia General Products

Cigars made by the Compañia General de Tabacos de Filipinas are known throughout the world, but the fact that this company is capitalized at three million pounds sterling and has three rich plantations in the Cagayan valley supplying a large portion of the best leaf tobacco consumed in the factory is not so well known. (The company has cocoanut oil and other big interests in the Philippines. Its owners reside in Barcelona, Spain. Their activities here embrace both agriculture and commercial enterprises.)

Tabacalera Cigars

Much care is taken in the Tabacalera factory in the manufacture of cigars, which are made under the registered trademark and brands of the company and sold everywhere, especially in the United States, where the company has agencies.

This company supplies tobacco to the French government tobacco monopoly and ships leaf tobacco to the Spanish market. It is one of several companies which are organized by private capital in the Philippines when the Spanish government tobacco monopoly was abolished, in 1883. It has had a prosperous and enviable history from the beginning.

La Flor de Intal

La Flor de Intal cigar and cigarette factory is managed by Kuenzle and Streiff, who also have the Alhambra factory.

One of the advantages these two factories enjoy is the buying organization the company maintains in the Cagayan valley, for the purpose of suitable tobacco both for the factories and f export in bale. The factories maintain a hi standard of excellence.

Tobacco purchased in the Cagayan valley placed in warehouse there, and sorted and bal and shipped to Manila, where it is aged. Ciga of all grades are sold throughout the worl China being an important market.

Watt & Co., who operate La Minerva cig factory in Manila, make high-grade cigars onl for the export trade.

Mr. Watt states that the orders for Miner cigars are increasing; the factory has nev lacked a good volume of orders from reputab dealers in the United States, who have stood b the management in its policy of keeping to t quality of the cigars above the five-cent standar The factory is not a large one; it is personal supervised by Mr. Watt himself, who is a ma of many years' experience in the making of goo cigars in the Philippines and elsewhere. H believes that the higher class of trade is t safest to cater to one year with another. Th letter of credit of the company's agent i Australia has just been renewed; letters com mending the factory's goods have been receive from the United States.

Liggett & Myers' Cigarettes

Liggett & Myers have erected a cigarette fa tory at San Miguel, Manila, where they a making La Favorita cigarettes and putting the up in packs of ten, which they sell for fi centavos in the retail market. These cigarett

e made by the most modern cigarette machines ntainable, in an absolutely sanitary manner. he hands of the operators never touch either e tobacco or the cigarettes; the packing and apping is even done by machines, so that the ly hand labor required is the placing of the garette packs in the carton.

Philippine tobacco is used, but no scrap. It selected leaf, which is stemmed and butted and ed from every particle of dust. It is cured roughly in accordance with the best methods r curing Philippine tobacco. Samples of the garettes are sent each week to the company's oratories in New York, where they are exined. In this way the cigarettes are kept to absolutely uniform standard of excellence. ie original blend of the tobacco was worked t in this way.

La Favorita cigarettes are made for the hilippine trade. Several million are sold nthly. An experienced man in the manuicture of Liggett & Myers cigarettes is manr of the factory. Robert S. Rogers is sales anager for the company in the Philippines both r its Favorita cigarettes and the various merican brands imported and sold here in inreasing quantities.

The Germinal Factory

The Germinal Cigar & Cigarette Factory, of hich Mauro Prieto is general manager, owns a antation of 4,000 hectares of land on the banks the Cagayan river, from which much of the bacco used in the factory is obtained. The antation is administered by the company, which ives painstaking care to the growing and curing its tobacco.

The Germinal cigarette has wide popularity in ie Philippines while the cigars figure big both the domestic and the expert trade.

The company's plantation is known under the ame of Malohn hacienda. The annual inundaons of the lowlands enrich them after every op, while the higher sections are excellently dapted to the growing of tobacco. (On the wlands, too, there are fields suitable for toacco; others are devoted to food crops, corn id vegetables, for the plantation workmen and ieir families.)

Dr. Ariston Bautista, president of the Gerinal company, describes the plantation as an leal one. The river branches around its borders, aking it practically an island. Much land reains to be cleared of huge forest trees. It is ie company's purpose to clear additional areas f land each year, and to extend the tobacco elds; but the chief drawback to this, as to other gricultural projects in the Philippines, is labor.

Dr. Bautista is the third president of this ilipino corporation, which is capitalized at ,500,000 pesos, fully paid. The first president as Luis R. Yangco, Sr., and the second was enito Legarda, once a member of the Philipine commission. The company takes pride in eeping its product to a fixed standard of recogized quality.

La Maria Cristina Output

One of the well established and progressive igar factories of Manila is La Maria Cristina, onducted by Meerkamp & Co. The factory was stablished in 1883 and in 1886 was designated Proveedora de la Casa Real," that is "Purveyor to the Royal Household" of Spain. M. G. Batteki, the manager, is an experienced tobacco nan from Holland who has been managing this actory for several years and is familiar with the obacco industry in the Philippines.

The company's brands, La Maria Cristina, La Calidad, Punta de Mariveles, La Palma, El Almirante and Governor General are made in the standard shapes and sizes and are well known in he Philippine export cigar trade. The company gives particular attention to export business. Australia has been one of its big fields for many ears. In 1887 it won gold medals in the toacco exhibitions at Madrid and Adelaide; in 889 this experience was repeated in Paris; in 1886 a medal was won at Amsterdam and in 1888 another was won at Melbourne.

The British market has been a heavy consumer of Maria Cristina cigars. Twenty years ago the company made but one shape, cortados, and of these manufactured 200,000 daily, chiefly for London and Australian markets. The cigars were tied in bundles of ten and packed 500 to the box, the price being 12 pesos per 1,000. This cigar is still made for the domestic trade, and is still of the old-time quality, but the export demand has gone to other shapes, now the main output of the factory. Great care is used in the manufacture of cigars in this and other reputable factories in Manila. In this particular factory precautions advised by the bureau of science are taken against beetle infection. They have proved effective.

Costs Have Greatly Increased

In the old days, when the Maria Cristina was devoted exclusively to cortados, stemmers got 80 centavos a week. They now earn 3 to 4 pesos a week. Leaf tobacco of the same or better quality than now used cost 10 pesos a quintal. It now averages several times that figure. A foreman was hired for 20 pesos a month, where he now commands 100 or 120 pesos. Cigar makers' wages were similarly lower than the current scale, and the rent paid for the building was but 200 pesos a month, against about 2,000 pesos now.

These figures show graphically how manufacturing costs have increased in the tobacco industry in the past 20 years. New conditions prevail throughout the industry, from the fields in Cagayan and Isabela, where the leaf for cigars is grown, to the restrictive regulations imposed by the government. Factories are better, as well as wages. The reputable companies have names long established which they value among their chiefest assets. Their resources are a foundation for their guarantees.

Cigar Exports from Manila

Following is a table showing the growth of the cigar industry in Manila as it is reflected in the internal revenue collections:

Year	*Int. rev. taxes Pesos*	*U. S. rev. taxes Pesos*
1910	3,670,121.09	528,201.15
1911	4,462,689.41	189,783.91
1912	4,837,851.19	448,732.65
1913	4.967,447.65	637,566.03
1914	4,802,902.77	363,398.19
1915	5,080,560.74	408.353.34
1916	5,390,929.16	714,947.40
1917	5,915,525.10	1,253,851.23
1918	6,219,110.51	2,018,730.65
1919	6,627,716.29	2,404,090.04
1920	6.537,326.83	3,177,068.17
1921	3,768,663.42	1,588,534.09

Acquainting Himself With American Conditions

Robert J. Kugelman, closely associated with the old established firm of A. L. Van Beek, has been in this country for several months, but intends to return to Holland to attend the fall inscriptions of Sumatra and Java tobaccos within a few weeks.

The object of his visit to the United States is to get acquainted with the requirements of the American cigar manufacturers in East Indian wrappers, and incidentally with the requirements of the cigarette tobacco trade, since A. L. Van Beek also conducts the well-known Hollandsch-Turksche Maatschappij, one of the foremost packers of Turkish cigarette leaf.

He had visited some of the principal cigar manufacturing centers in the United States and Canada when interviewed by a reporter of TOBACCO, and was very enthusiastic over the splendid reception and attention accorded him all along the line, and incidentally booked some very substantial orders for Sumatra and Java tobaccos.

Although being a native of New York City, but resident of Europe ever since boyhood, he feels quite at home here, in spite of the fact that he made a very wonderful acquisition to his household, and made his initial venture into the United States on his honeymoon trip. Mrs. Kugelman is a native of the City of Singapore, East India.

His headquarters in New York are with Max Maier, at 128 Water Street, who has been appointed the representative of A. L. Van Beek, and where they are pleased to show samples of the firm's extensive purchases for the American market, to visiting friends.

Mr. Kugelman is the son of the late, well-known Havana exporter, Julius A. Kugelman, who is remembered well and favorably by many in the trade in this country and in Cuba.

H. L. Judell & Co. and the Alhambra Cigar

H. L. Judell & Co. is one of the pioneer cigar jobbing houses of the United States featuring Manila cigars as a brand building proposition.

Carefully observing the progress made by Manila cigars at San Francisco from the time they were first introduced, the House of Judell was quick to realize the possibility of the trade. Starting with a brand, they worked it carefully and conscientiously throughout their territory. During the first year of the war they had gained a large distribution. In fact it was one of the most important Manila accounts in the United States.

The war, however, and the peculiar conditions in business which followed, the demand for large quantities and cheap jobs, and the sky rocketing of prices, served to disorganize to some extent the brand building undertaken by the House of Judell.

Yet the experience gained convinced them that staple Manila cigars under a brand name was a profitable undertaking, and as soon as the market returned to normal condition, they took a line and started ahead on the same policy that had proved so successful in former years.

H. L. Judell & Co. determined to get the best factory connection at Manila that it was possible to obtain. H. L. Judell, the founder of the house, visited Manila a couple of years ago and made a careful study of the factories and the men responsible for their operation. They wanted to be sure they were right. With this idea in mind they set about to obtain the Alhambra account. When A. Myers, the head of the corporation which owned and controlled the Alhambra factory, was in the United States, they took the matter up with him. After investigating thoroughly conditions here Mr. Myers decided that H. L. Judell & Co. were best equipped to distribute Alhambra cigars in the United States.

Alhambras are known the world over. Perfect cigars in perfect condition and carefully packed won high praise for Alhambra cigars over all the years they have been coming to the United States.

The House of Judell and the Alhambra cigar make an ideal combination. No one in the United States knows the market better than the Judell's and no one at Manila exercises more care and judgment in the preparation of merchandise than the Alhambra factory.

With faith and confidence in each other and with a common plan to work on, the factory and their United States representatives entered the market last fall with a Manila quality proposition.

That their policy is sound and that the enterprise will grow is certain from the initial successes of the venture. Some of the best houses in the United States handling high grade cigars have taken on the account, and without exception they have built up a good business on Alhambra.

Investments in the Dutch East Indies

Although the economic disorganization caused by the war caused a decline in most of the products of the Netherlands Indies, investors, looking toward the future, are showing much interest in insular investments. The insular administrators look with favor upon the investment of foreign capital in the islands and the Netherlands Chamber of Commerce in New York supplies the following information regarding the methods of acquiring lands in the Dutch East Indies for agricultural and plantation purposes:

"In the matter of governmental administration the Dutch East Indies must be divided into two distinct types of territorial districts, territories which are administered directly and indirectly. By the first are understood those parts of the islands which are administered directly by Government officials; under the latter classification come the districts which are administered by native rulers under the guidance and supervision of the Dutch officials, districts presided over by sultans, rajahs and other native heads.

This division or distinction is of importance with relation to the assignment of lands for agricultural purposes.

In the "directly administered" districts lands which are not held by third parties (so called "free domain") are allotted for agricultural purposes by the general administration of the Indian Government itself; in the "indirectly administered" territories, or "self-governed" districts, this power is generally in the hands of the native rulers, but under the direction and supervision of the Netherlands administration. It follows that those who seek land for agricultural purposes in the Dutch Indies, must apply (with the exception of instances mentioned below under 5 and 6) either to the East Indian Government or to the native Indian self-governing officials.

2. With the exception of Soerakarta and Djokjakarta (the so-called Vorstenlanden) all the territory of Java and Madoera must be classified as "directly-administered." In this territory lands for agricultural purposes are given by way of a long lease. Direct ownership may be acquired only in the case of small pieces of land for the purposes of erecting buildings or sheds or warehouses.

3. The right to lease is given for a duration of not more than 75 years. At the expiration of the lease arrangements for a renewal of the lease may be made. As leasers are admitted Netherlands subjects, residents of the Netherlands and the Netherlands Indies, and commercial organizations incorporated in the Netherlands or in the Netherlands Indies. Foreign capital can thus participate in the agricultural development, by incorporating under the national laws. The charter may be in a foreign language, and is subject to the approval of the High Government, an approval which is not withheld when the aim is for purely economic pursuits. Companies established in the Netherlands must be properly represented in the Netherlands Indies. The question therefore of the origin or ownership of a company's capital does not enter into the consideration. No distinction is made in that respect; all capital is equal before the law, and companies with foreign capital are subject to the same tax regulations as domestic enterprises.

The possessions outside Java and Madoera are partly "directly administered," partly "indirectly administered." For the former "directly administered" territories of the Outer-Possessions practically the same regulations for the distribution of lands exist as for Java and Madoera. For the "indirectly administered" or "native ruled" districts the same rule also applies, i. e., that only persons and companies as mentioned under 3 may apply for lands for agricultural purposes. Up to a short time ago an exception hereto was made for the Government of Sumatra East-Coast where also foreigners or foreign companies, that is non-Netherlands subjects, non-residents of the Netherlands or of the Netherlands-Indies and companies not established in the Netherlands or in the Netherlands-Indies, could be admitted. In 1917, however, this exception was abolished with the understanding that existing rights, once acquired, are respected.

4. Rights to lands in "indirectly administered," or "native-ruled" territory of the Outer-Possessions have been given up to a short time ago in the form of so-called agricultural concessions for a maximum period of 75 years. Upon expiration of this period the concession could be renewed. In some districts the Netherlands Indian Government had reserved itself the right for the granting of such concessions. In these instances the concession was granted in the name of the Government by the respective head of the local administration. In all other instances the right to grant concessions was in the hands of the native rulers, under condition, however, of approval by the Netherlands Indian Government or by the respective head of the local administration.

By legal enactment, however, recorded in the Indisch Staatblad (official Gazette) of 1919, No. 61, a regulation has been made for the future according to which in the native-ruled territory of the Outer-Possession leases may be acquired, for the granting of which in each specific instance the consent is required of the respective head of the local administration. The granting of leases is for a duration of not more than 75 years; each request for a lease must cover an area of land not exceeding 8,750 acres.

5. In addition to the above mentioned regulations, non-natives may rent lands in Java and Madoera belonging to natives for a certain term of years (6, 12, 20 years), something which frequently occurs in the cultivation of sugar-cane. The agreement between renter and native owner requires ratification by the Netherlands Government officials specially designated for that purpose. The rights thus acquired cannot be transferred without the consent of the owner except where such transfer-right is expressly stipulated in the contract.

6. On the island of Java there exists moreover a peculiar form of land ownership, originated from the fact that in former years more or less extensive stretches of land with all their appurtenances have been sold by the Netherlands Indian Government. These so-called private lands, whose owners frequently have the right to stipulate certain payments or personal services on the part of the native tenants, are by virtue of a legal ordinance, specifically enacted to cover these instances, gradually being returned to the public domain. The result of this ordinance is that those who under these circumstances acquire by purchase lands of that character, incur the risk of remaining owners for a limited time only and that, should they have bought these lands at artificially inflated prices, they may have to surrender them to the Government at considerable loss. The Government would, in case of redemption of these lands, which can be accomplished by legal means if necessary, consider the actual value of the land only. For that reason caution must be exercised in the purchase of private property and such purchase is, generally speaking, not to be recommended.

Saving Tobacco

Delegates to the Anti-Alcoholic Congress at Copenhagen are designing measures to stop smoking. This is but the latest indication that the next objective of the anti army is tobacco. Non-smokers in America are doubtless in the majority, and should they all join in the campaign—good-by to nicotine!

Carlyle, who scolded nearly everything, pronounced tobacco "one of the divinest benefits the human race." It is too bad the philosoph is not alive to dip a pen in his vitriol bottle a write a really adequate judgment on the dog-i the-manger crusaders who would banish tobacc What if smokers are shortening their day Why should the fanatics care? To be glad it would be more in keeping with their dispos tions.

The real grounds for complaint against smol ers are their lack of courtesy and their careles ness. Lighted cigarette stubs cause many fire as insurance companies will testify. Forest fir more often than not are set in that fashion b automobilists and campers. A considerab number of city fires originate in wastebaske used as ash trays. If negligence of this kin were universal cigarettes might fairly be ou lawed for safety's sake.

Bad smoking manners are too prevalent. "N smoking" placards are commonly disregarde Men puff away in a crowd regardless of the di comfort they cause. Some users of tobacc have a genius for making themselves obnoxiou One tobacco company has distributed a leafl on smoking etiquette, with the remark tha "Courtesy among smokers is essential to th comfort of all of us, and besides it will definitel remove the possibility of legislation against to bacco."

The teetotal executioners are out to behead draw and quarter "My Lady Nicotine." He devotees must rally to her defense before the actually drag her to the block.—*New Yor Tribune.*

Trade Conditions in the Dutch East Indies

There is abundant evidence that the islands o the Dutch East Indies, in common with th Orient generally are recovering slowly from th demoralized conditions caused by the disorgani zation of commerce by the war. In all lines o business there is renewed activity and there i greater optimism felt by local business men.

The chairman of the Java Bank, the Bank o Issue for the Netherlands East Indies, reviewin financial conditions in the isuands in the year 1921-22, made the following interesting remarks

"The export figures for 1921 show an almos general decline. (But the export figures fo 1922 on the contrary show a gratifying increas over those of 1921.)

"An exception may be noted in the export o copra which increased with 43,000 ton, agains which there was a decrease of exports of cocoa nut oil of about 12 million gallons, a result o the closing of most cocoanut oil mills.

. . . This decline in exports must, however not be taken for a general collapse of our agri cultural enterprises, but rather as a reactio from the abnormal export figures resulting fro the removal of trade obstacles after the war. I may therefore be concluded that the export fig ures of 1921 indicate an approach to normal Counting the profits of our export trade it wil be seen that they have been generally small Sugar especially has been a disappointment t the operators, but in other products as well the results have been all but encouraging, due to a constantly falling market.

"In view of the fact that the economic conditions of the population of the Netherlands East Indies have not retrogressed, the import trade of the islands has not lost any of its importance.

. . . At the annual Fair of Bandoeng of September, 1921, foreign imports occupied a more prominent place than domestic products.

"While the Netherlands East Indies suffered from the general business stagnation of 1921. we may consider ourselves fairly lucky as compared with surrounding countries. Singapore and the Straits Settlements suffered more from the declining market prices of products than we, with the result that the conditions of the population was less favorable than here."

Wisconsin Tobacco Crop Gets Good Soaking Rain

ame in Time to Save North—Extent of Outcome Not Easy to Estimate—Southern Section Producing Promising Binder Crop—Buying Spirits Quiet Down—Pool's Perplexing Problems—Salaries Paid to Pool Managers.

EDGERTON, Wis., Aug. 25.—The rain of t Monday was a general one. A bet- soaking rain could not have been ed for. It came down steadily, and ily, and lasted about twelve or thir- n hours. It came in time to save most the crops in the north. Of course it almost impossible to predict what a p of tobacco will make up after a n—it almost always makes better gress than one's estimate—but many the valley crops will make a fine der spread now with some warm ather. The crop in the north is still scrubby one, and will be one of the rest since 1909 without warm weather l more rain.

Practically all of the ridge crops are med as stemmers, as it is. The rain ne too late for them, it is thought, ny of the valley crops were too ripe the rain to spread them out into ders before the harvest stage. The iter's estimate today is that little or hing can be expected from the early thern tobacco, but the late set, and "medium" set will produce a fair lot binders.

The south is perhaps producing the t crop of binders in several years. though it is late, there is a lot of mise in it. It has come booming ng the past few weeks, and the early l will be well harvested by the end of t week. A ride yesterday through ood growing strip of territory in the th, where the growers have been nt to receive high prices in the past, e the impression that about eight per t of the fields were already good, viceable binders, and perhaps thirty- per cent more of the fields gave mise of turning out nicely with a ple of weeks of good weather. Some these will fulfil the binder promise, ers will not. The other fields showed usual signs of turning out sound nming.

The weather has been very cold. Sev- l days the highest the thermometer istered was in the lower sixties. The three nights frost warnings have n sent out by the weather bureau for Wisconsin tobacco growers. Thurs- night, it was "frost possible." Last ht it was "frost probable." Whether of the northern regions were bitten night has not yet been ascertained. e south escaped it to date. Many mers burned smudges last night, but urned out to be unnecessary.

ut, as it is, this cold weather is kening up many fields of hitherto leafed binders, and is holding up the uring of the entire crop.

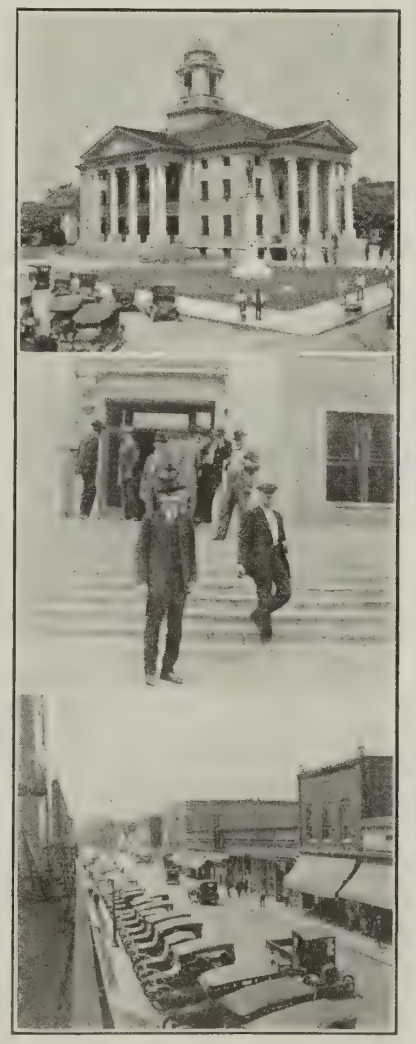
Buyers Lost Nerve

he buying in the north has slowed n. Thirty cents seemed to be the om last week, with thirty-two cents high. The prices, the crop, and the ther, have put an effective brake up- the movement, and some operators ed entirely. It is too much of a ble at those prices for a buyer to his nerve very long.

uying of the 1923 has also started in the south in a very modest . Spitzner is reported to have ght several crops in the vicinity of Forest. Jones, Grundy and Soulman, Janesville, have bought about 150 s between them near Orfordville, in k county. Prices were not yet fully wn, except that several crops went at en cents straight through. The ement is not causing much comment, he knowledge is general that there be enough southern at least for yone. The independent acreage in south alone must total well up in the es in percentage of the tobacco vn, and with a larger portion of the binders in the south than usual, the pendents alone are almost capable of plying every one with their binder ls—should nothing happen to the

Pool in Perplexing Predicament

With the pool swinging into another selling season, with about four thousand case carry-over, they are facing a most difficult problem. With a smaller crop than this year, last year they had a terrific time to get rid of their southern, and finally had to pack about eight thousand cases, after slipping grades, and using other bargaining methods. If the south produces them a large supply of binders this year, they will have to grade a large



(*Continued on page 57*)

Tri-State Co-op. Wins "Legal Victory"

GREENVILLE, N. C., Aug. 25.—After two hours' deliberation, the jury in the case of G. H. Pittman against the Tobacco Growers Co-operative Association, returned a "mixed" or "straddled" verdict. Two issues were submitted to the jury.

First. Did the Association have 51 per cent signed up? The jury answered this, "No."

Second. Was fraud and misrepresentation practiced upon Pittman by the

Upper Picture, Pitt County (N. C.) Court House. Center, Judge Horton leaving Court House. Lower, Main Street, Greenville—everybody at court.

Association? The jury answered this, "No."

Judge Horton immediately ruled that the verdict was contradictory, and that the case must be decided upon the "fraud" issue. He, therefore, set aside the verdict in so far as it was in favor of Pittman, ruled in favor of the Association and ordered judgment in the amount of cost of trial entered against Pittman. Following the setting aside of the verdict in the first issue, the plaintiff served notice of appeal. He then gave bond for five cents per pound damages provided by contract in order that he might be permitted to sell his present year's crop on the open market.

The Association regard it as a victory for them, but outsiders, while recognizing the *legal* victory thus far secured, are of the opinion that the bringing out in open court of the enormous salaries paid officials ranging up to $30,000; the fact that tobacco was bought from the association and sold on the open market for large profits, and the failure of the association to make, thus far, any accounting as provided in the act of their incorporation, and the methods used in securing members, will prove so far reaching that it will tend to greatly weaken the morale of the association.

There are yet in Pitt County 107 more suits pending against the association, and each suit will be tried upon its individual merit, but hardly another one of them will be reached at this term of court.—MCFARLAND.

North Carolina Auction Markets Open

(*Special Telegram to* TOBACCO)

WILSON, N. C., Aug. 28.—The tobacco auction markets of eastern North Carolina opened today for the season.

As usual on openings, 90 per cent of the offerings were primings. There was more real common tobacco on the markets today than has been seen for years.

Common and medium grades opened higher than last season, and all were in great demand.

Not enough good tobacco on the salesfloors today to adequately judge the prices. A few piles sold around forty and fifty cents.

Sales at Wilson aggregated 450,000 pounds. Rocky Mount reports sales of 200,000 pounds. Greenville sales totaled about 300,000 pounds.

The general average price on the markets mentioned ranged between 20½ and 22 cents. All farmers interviewed seem well pleased with prices.—MCFARLAND.

Good Auction Prices in the South Carolina Markets

WILSON, N. C., Aug. 27.—Up to Saturday night the auction markets of the South Carolina tobacco belt report between twenty-eight and twenty-nine millions pounds of tobacco sold. The tobacco sold is well up in the body of the plant, and therefore of the better grades, making the general averages thus far obtained around 26½ cents. Several markets report averages of over thirty cents. It is estimated that around fifty per cent of the crop has been marketed in the South Carolina belt.—MCFARLAND.

To Seek Bids on Upmann Properties

HAVANA, Cuba, Aug. 22.—The Temporary Bank Liquidation Commission has authorized the liquidating board of the bank to call for bids for the sale of the cigar and cigarette factories of H. Upmann & Co., and the advertisement announce that these bids will be received up to October 8, when they will be opened and the factories and brands will be sold to the best bidder. It is stated that the sale is to be for real money, no certified checks of the bank being accepted by the liquidating board in this sale.

Greenville Opening Prices Higher Than 1922

(*Special Telegram to* TOBACCO)

GREENVILLE, N. C., Aug. 28.—The Greenville auction market opened today with about 300,000 pounds of tobacco on the floors. A big crowd was in attendance. Many from a distance. Buyers were well represented.

The offerings consisted mostly of primings. Very little of good grades were in evidence. The prices were higher than at the opening last season, except on the good grades.

The co-operative house is not ready, and there is nothing doing; not much grading done yet.—KING.

The Tobacco Market Conditions

While the past 60 days have shown a marked improvement in manufacturing conditions throughout the country, there has been little activity on the whole in the leaf markets.

Manufacturers are marking time in making commitments on new tobaccos, especially the factories making higher-grade cigars, due to the Havana situation.

The new Porto Rico tobacco is being moved rather freely.

With the sampling of the Broad Leaf as well as the Northern Wisconsin packings, the probabilities are that within the next 60 days there will be considerable activity in the local market for these two commodities.

Reports from Pennsylvania indicate that a large percentage of the 1922 packing has been contracted for by local as well as the large packers and there will be little surplus to offer in the local market.

This also applies to Ohio tobaccos so that with a normal resumption of business and increasing orders, the large crops that 1923 promises will be a relief to what would otherwise be an acute shortage.

Sumatra and Java Marts Largely Dependent on U.S.

Continued Depression in Cigar Industry of Germany, Austria, and Europe Generally, Makes It More and More Evident That America Is Main Dependence of Amsterdam and Rotterdam Auctions—Some Interesting Data.

WASHINGTON, D. C., Aug. 29.—American Consul General George Anderson at Amsterdam has sent the following report to the Department of Commerce on tobacco auctions at Amsterdam:

"It is becoming more and more evident that the successful sale of the tobacco from the Dutch East Indies depends upon demand from the United States. The continued depression in all lines of business and especially in the cigar industry of Germany, Austria, and Europe generally, offers no encouragement for the sales of Sumatra and Java tobacco in the Amsterdam and Rotterdam auctions. The demand from the United States has been the only satisfactory factor in the auction sales held so far this year. American buyers, by bidding against each other, forced prices to a fair level for the sales to the United States, but the prices fell back immediately to below cost as soon as this demand was satisfied for the time being.

Changes Have Taken Place

"In 1921 there was still considerable demand from Germany and other parts of Europe but in 1922 the chief demand for the higher grade tobacco soon sifted down to that from the United States and that from the Dutch cigar factories. Inasmuch as the cigar making industry of Holland has been passing through a most critical period and is still embarrassed by decreased consumption, low prices, and a collapse in its export trade, there has been comparatively little help for the producers from that source as far as prices are concerned.

Current Year's Sales and Prices

"The sales so far this year have been largely of the high grade leaf for the United States, so that the comparatively high prices realized do not properly reflect the probable receipts for the entire crop. This year's sales effected by the

Wisconsin

(*Continued from page* 55)

t of the good tobacco as stemming to
rid of it, or else pack up a huge
y-over. The stemmers have been in
habit of getting sixty per cent of the
e's crop, and the chances are they
l do so again this year. With a big
pendent and pooled supply of south-
binders, much good tobacco is apt to
sold in the stemming grades. This
l cause a storm of protest from the
nbers that might trouble the pool to
ther, or it might not. Neprud's ac-
tuating of the pool's iron purpose to
de the tobacco on quality alone, and
sell on the basis of quality alone, has
n widely advertised all year, and has
n constantly driven home to the farm-
through the columns of local papers,
of the *Pool Bulletin*.

f good, leafy tobacco is sold as stem-
g by the pool this year, the quality
grading propaganda is apt to cause
ig backlash to the pool management.
t is packed, it means danger for the
l management, danger for the '24 pool
ket, and wide open roars from their
nbers. One thing only is perhaps
ain, that Neprud's slogans will have
re try outs this year.

he discontented pool members are
shing at their leash. The attractive
pendent prices make them rage in-
dly. Rage that there should be independents at all; rage that there should be so many of them; and rage that they can not take the liberty to accept those lucrative offers. After the soft assurances of the pool organizers that over ninety per cent of the state's growers were pooled, it is a matter of ever increasing astonishment to them to daily find new evidences of the non-pooled growers' large share of the crop.

Independents Set and Get the Price

Also, the pool's claims to bringing up the price from one year to another is receiving a severe jolt again this year, by the easy and confident way the non-pooled grower lets go of his tobacco upon receipt of an attractive offer. Also it is dawning on the pooled fraternity that it is the independent growers that have set the price the past two years.

At the first meeting of the board of re-elected directors of the pool, the office of general manager was voted to be temporarily abolished. Therefore the resignation of C. A. Hoen was accepted, together with a vote of thanks for Mr. Hoen's sterling service of the past year. From a member of the board, the writer has it that the executive council will temporarily fill the vacancy. Who will be Mr. Hoen's successor is as yet undecided.

Pool Salaries

The *Pool Bulletin* of August 15:

"As per request of delegates at the state meeting the salaries of state pool officers are published, and are as follows:

C. A. Hoen, general mgr.	$10,000
John Holtan, wholesale mgr.	9,000
Jens Davidson, president	5,000
Lars Lien, vice president	5,000
Johnson, sec. and treas.	5,000
Neprud, field manager	5,000

"And that Attorney Sapiro is paid a very reasonable retainer's fee. Anybody interested may find the exact amount by consulting the director of their district Also that Emerson Ela is not on a salary basis, but is being paid per bills rendered for services.

"The following men are employed until end of the fiscal year, and are paid the following per month:

J. J. Watson	$200
Eber Arthur	200
D. P. Devine	200
P. J. Houge	175
A. Holtan	166
J. Marks	166
J. Ellickson	166
Theo. Orvald	166
Oscar Swenwon	150
C. Christianson	150

"The above are warehouse superintendents at the different points the pool has run a warehouse the past year."

Trade Personals

Felix Greenhut, the New York office's state representative of the General Cigar Co., is east on a trip.

Harley Jefferson, V. P. of the Universal, is back with the rest of the Jeffersons at Sparta on a visit.

Superintendent of the leaf department for Fendrich, A. J. Ross, was looking over some of the company's early northern purchases the fore part of this week. He is very enthusiastic about his purchases.—BADGER.

Chicago Trade Notes

CHICAGO, Aug. 25.—The leasehold interest in the Flatiron Building at Milaukee and North Aves. has been acuired by The United Cigar Stores Co. r 15 years, at a gross rental of $100,-0. The United has also leased the en-e main floor at Madison and Wells reets for 10 years. Also the corner of ifty-third street and Hyde Park for 20 ears, at a gross rental of $132,000. It as taken the northwest corner of Forty-venth and Calumet streets for a term 30 years at a total term rental of 0,000.

Rudy F. Vogt, who represents the /m. J. Seidenberg Corp. in Louisville, y., was a recent Chicago visitor.

Returns with Good News

E. P. Oakes, the Gato sales star, has turned from a visit to Kansas City, here he found business on the increase.

Goes with Seidenberg

Jay R. Isett has resigned from the iles staff of the Hotel Sherman cigar epartment and connected with the Wm. Seidenberg Corp. Isett, who caters the individual smoker who buys by the ox, has always been noted here as a ader in his class. He has been with ie Hotel Sherman for the past two ears but from now on will feature ancho-Arango to his large clientele.

Predicts Increase in Cigar Prices

Wm. Waldmann, who represents the referred Havana Tobacco Co. in this arket and who is also cigar depart-ent manager for Many-Blanc Co., has eturned from New York, where he was conference with José Diaz. Billy is elling the trade that cigars will advance price shortly.

W. D. Walker, who represents S. S. ierce & Co., of Boston, was a recent isitor.

Jacob Rosenberg of Eduardo Gonzalez o., Tampa, is preparing for a two veeks' tour of the middle west.

Francis Braynard, formerly represent-ng G. W. Faber, Inc., is now with sterbrook & Eaton of Boston as Chi-ago agent.

Ed Marks has taken over The Mutual igar Co., at 18 West Van Buren street, ormerly owned by Kalish & Marks. Kalish recently retired from the firm.

J. P. Brill of the Wm. J. Seidenberg Corp. has left for a trip to Sioux City, Omaha and Lincoln and will book his ancho Arango Christmas orders.

Notable Window Display

A fine window display of Webster cigars is being shown at Ortenstein's Drug Store, Forty-seventh street and College Grove avenue. It is one of the largest cigar displays ever put in a window here.

Arthur Esberg, who early in the year opened The Eleven-Eleven Smoke Shop at 1111 Argyle avenue, has hit the rocks and, as usual, all the houses are aware of it.

Louis Nathanson, head of the Louis Nathanson Co., Minneapolis, passed through a few days ago on his way home from New York and Detroit.

Much in Evidence

El Producto cigars are big headliners in the Chicago territory. The good work has been done by the Clarence Hirschhorn & Co., who have secured a wide distribution.

Old Fashioned, made in bond cigars from the Tampa factory of Wm. J. Seidenberg Corp., have arrived at the Miles Cigar Co., 28 East Monroe street. Eight high priced sizes are now being offered to their box trade.

In the Public Eye

A quarter page ad of Mozart cigars, showing five of the popular sizes, appears in the Chicago newspapers for Clarence Hirschhorn & Co., 217 West Randolph street, the Chicago jobbers.

New Price Booklet

Frank S. Snavely, cigar department manager of the Hotel Pfister, Milwaukee, is out with a new price booklet. It is headed, "'My Lady Nicotina's Shrine," and shows six sizes of the Pfister Special, four sizes of Mi Lola, Chancellor, Corina, Pancho Aranga, El Verso, José Villa, Garcia & Vega, La Palina, Webster, El Roi Tan, and five sizes of Aresco, Alcazar and Salve, a private label. The Pfister has one of the finest cigar emporiums in the state. It also acts as jobbers for several brands.

A full half page ad of Blue Boar cigarettes appeared in the newspapers. The factory salesmen are still giving away $2 for counter display space.

Going Strong

All the products of the Falk Tobacco Co. are showing healthy sales increases. Herbert Tareyton cigarettes are "burning up the town," and Serene, Personal and Herbert Tareyton smoking mixtures are selling very fast.

Lyman Baum, of A. Santaella & Co., New York, has arrived, and while he is on his vacation, he took time to say "Hello" to their Chicago customers. He returns east in a few days.—H. L. H.

San Francisco News

San Francisco, Cal., Aug. 22.—The vacation season for Californians is drawing to a close. By that we mean the grand rush of the interior to the seashore and of the coast residents to the mountains; of north-enders to the south, and south-enders to the north, which continues in force from the middle of June to the middle of August. There are vacations before and vacations after, but not a regular exodus. And now for the winter tourist vacationists, as well as the regular fall visitors. These mostly come from the east to pay back the invasion of Californians during the summer, and really constitute one of California's valuable crops, more profitable by far than her tobacco crop. The "drifters," the homeless bunch, who drift out to the fruit ranches during the summer months and come back to the cheap lodging houses to gradually eat up what little they have earned, are not yet with us; but, they are not a very profitable bunch, at the best; though they help to make the streets look crowded.

The retailers are naturally in better spirit, for it spells the beginning of the most prosperous season for them.

Pleased with Trade Conditions

Jack Martin, the treasurer of the Retailers' Association, finds business in very good condition. He has served the wants of the great Pacific building for a short lifetime. Time was when a next-door saloon helped him in supplying nerve steadiers; and since the fatal day when the saloons met their Water-loo a double duty has fallen on Jack's shoulders. But he always was a willing friend, and has been performing his duty nobly, by selling them more cigars than ever before, and supplementing this with a wholesome supply of the best bar candy goods to be had. That his efforts are appreciated is amply proven by the way in which they trade cash for goods.

Cigar Stores Carry Candy

It is a jobber of the confectioners' group who furnishes the information that Rising & Scheffer carry one of their best confectionery accounts. Edward L. Cerf, about the most hustling manufacturers' representative in the confectionery line on the Pacific Coast, testifies that confections must be a good part of their business, though not, of course, the main business. "And the cigar stands," he says, "are among our heaviest customers. It seems to us as legitimate for them to carry confectionery goods as it is for the grocers to carry either confectionery goods or cigars." And Rising & Scheffer themselves consider them an important factor of trade in all three of their stands. They find business good, and beginning to be better.

Still in Drydock

Julian K. Solmonson is still under the care of the hospital. It is needless to say that his friendly face has been missed in the lobby of the Spreckles Building, for his personal courtesy and friendliness had secured him the patronage of the building 100 per cent, and with Julian to operate it, the stand always had a live wire appearance.

Whenever there is an odor of tobacco smoke in the air, there is always some jobber bobbing around—seems to want to keep the home fires burning. Anyhow, "bizness is bizness," and the jobbers are after their share. Dave Rinaldo has been rounding them up in the direction of Willets, and convincing them that their customers would want to take more smokes than ever to quiet their nerves over their fruit losses. Well, if he couldn't find some excuse to sell goods, he wouldn't be in harmony with the policy of the Rinaldo Cigar Co.

Jot C. Wood has come and gone. He hit the city on his return from the east with the Skill, the two-for-fifteen cl of the Key West Cigar Co., of Red L Pa. He has had great success in lo ing jobbers for this and the O a throughout the west.

A Happy Blend of Business Pleasure

It is business and it is pleasure. also Jacob Pinkussohn and his v They are from Atlanta, Ga. And true that Pinkussohn's Potpouri, high-grade smoking mixture, made Turkish, Perique and Virginia tobac is making Atlanta famous. And the Rinaldo Cigar Co. is going to help, they have taken on its distributio San Francisco. H. & S. C. Berco will be the Oakland distributors.

Sam Israel has returned safely f his cyclometer trip to Los Angeles. his cyclometer says that he kicked up dust for 1,500 miles. One wouldn't pect that of Sam, from the way he st right close to business; but it is very tain that he saw about all there wa see in and about Los Angeles, whet they had time to see him or not.

John Gerdts and family are takin pleasant outing at Paraiso Springs, Paso Robles, one of the beauty spots California.

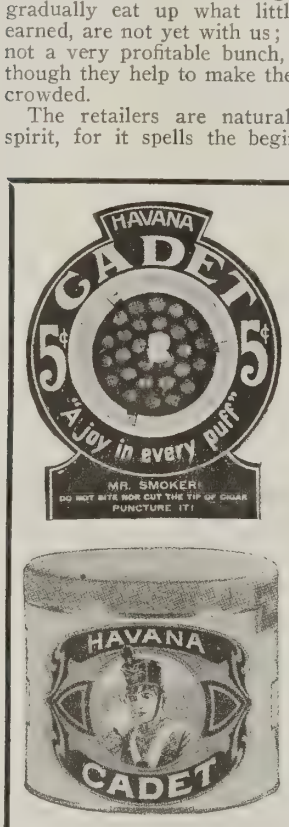
J. R. Eppler, in charge of the city fice of the General Cigar Co., is out the championship of the United Sta He is a past master when it comes single sculling, and a contest will be h at Vancouver, September 3, under auspices of the Pacific Inter-club Ya Association.

Coffee and Tobacco

Some of us have been too deeply pressed by Dr. Dowling's pronouncem on coffee, and another equally emin physician's statement that tobacco harmless—those, we mean, who seize such statements as new license to "go far as you like."

The sad beauty of medical judgme on any point in which there is the fa est room for doubt is that equally emin medical judgment can always be fo to gainsay it.

The same is true of lay judgme Nothing is commoner than the case of virtuous old gentlemen of 95 who tribute their good health and long lives total abstention from tobacco or fr stimulants, or from something e pleasant. Nothing, that is to say, exc the case of equally-sprightly old gent men who explain their happy approach the hundred mark by saying that th have smoked like factory-chimneys, done something else presumably destr tive, ever since they were weaned.



One of the few general principles t medical men do not much dispute amo themselves is that there are such thi as "physiological idiosyncrasies." T is a pompous way of saying "perso pecularities," differing for different dividuals. Fish is poisonous to o watermelon to another. One thri thinly on a starch diet, another sw upon it into a balloon of fat. Some gr old gracefully on an alcohol ration t sends others to the jails and poorhou Tobacco seems to soothe a great m and to injure some.

The case with which each of us is m familiar, of course, is our own. overliberal use of tobacco has a mu greater observable bad effect on our gestion and nerves than a correspond use of alcohol. We know many men whom we think the converse is true.

The key to the fact, where unusual p sonal peculiarities are not involv probably lies in the difference betwe Temperance and Excess, though th themselves are relative ideas and dif with different individuals.

Bread and beef cannot be call "poisons." But, taken in inordin quantities by an overstimulated appeti without corresponding mental and mu cular labor, they have distinctly poisono effects.

Coffee and tobacco do not notably jure the great body of men who use th in ordinary degrees and ways, because t billions of many races and places th have used both habitually for generatio past live and die much as their fello that do not use them. An excess

ury. Virtue itself can be perfected into
: nuisance to all that it touches.—*New
)rleans Item.*

To Aid the Federation

Packers and dealers in leaf tobacco
ıave formed a committee which will can-
ıass the trade for new members in the
Federation for the Support of Jewish
Philanthropic Societies, it was announced
ecently at headquarters, 114 Fifth Ave-
ıue, by Jerome Waller of Rosenstadt
ınd Waller, chairman of this trade. Mr.
Waller will work in co-operation with
he Business Men's Council of Federa-
ion, which, through its city-wide trade
›rganization covering more than 100 in-
lustries, is campaigning to raise the $500,-
)00 deficit in the Federation's 1923 bud-
get of three and a half million.

Mr. Waller, chairman of the leaf to-
bacco trade, has accepted a quota of
$5,000 to be raised before the end of the
year. Among the members of Federa-
tion are 201 men in the tobacco trade
who donated more than $30,000 this year.
It is Mr. Waller's intention not only to
encourage these men to increase their
subscriptions, but to induce every Jewish
packer and dealer in foreign or domestic
tobacco to become a member.

"We always think of a smoking man
as a genial person and his response to
charity is as generous as one would ex-
pect," said Mr. Waller. "Our chief duty
now is to acquaint the tobacco men with
the tremendous scope of Federation's
work, including the maintenance of 91
institutions for the care of the sick, the
aged and infirm, the orphans, unmarried
mothers, crippled, tubercular and deaf.
It also has many nurseries, settlements
and summer vacation camps for adults
and children. Federation also operates
seven Talmud Torahs or religious
schools in New York.

"This is only a brief summary of Fed-
eration's activities, yet it will indicate,"
continued Mr. Waller, "the worthiness
of the cause to which members on the
leaf tobacco committee and myself are
asking our colleagues to subscribe."

Members of Mr. Waller's committee
include Richard Bythiner, of E. Rosen-
wald & Bro.; Jack Jacoby, of Meyer &
Mendelsohn; Ira Strouse, of Strouse &
Holzman; Jack Marqusee and M. H.
Kleban, of Kutinsky & Adler. All are
well known in the trade.

A report of subscriptions in this in-
dustry compiled by Federation shows
that of the 201 present members engaged
in leaf tobacco trade, 34 donate $100 or
more, 10 give from $250 to $500, 14 sub-
scribe from $500 to $1,000 and four men
are donors of more than $1,000. With
that record as a basis, Mr. Waller's com-
mittee members have no fear that the
quota of $5,000 will not only be filled, but
will be generously oversubscribed. How-
ever, they are just as anxious to get
quantity members as large donors, the
purpose being as much an educational
campaign teaching the value of Federa-
tion to the Jewish community as it is to
raise funds.

Some of the large subscribers to Fed-
eration well known in the trade are
Benno Rosenwald, Marco Fleischman,
Morris Rossin, Aaron J. Bach, Frank A.
Bach, Isaac A. Bach, Fred F. Bach,
Julian S. Bach, Henry J. Bernheim, Isaac
J. Bernheim, Tobacco Leaf Publishing
Co., Samuel H. Bijur, Howard S. Cull-
man, Ernest Ellinger, Jr., and many
others.

W. D. C. Pipe Nine Wins

The W. D. C. baseball team defeated
the Grebe Radio outfit in a Y. M. C. A.
Industrial League baseball game one eve-
ning last week, by the score of 9 to 0.

Holhuber, of the winners, allowed only
three hits, striking out 12 men. In the
sixth inning, W. Smith cracked out one
of the longest homers ever seen on the
Jamaica Y. M. C. A. oval.

The members of the W. D. C. team
are:

J. Smith (c); Holhuber (p); Con-
nolly (1b); Feinsilver (2b); Pawlowski

NEW YORK, THURSDAY, AUGUST 30, 1923

BUSINESS OUTLOOK ENCOURAGING

Exports now appear to be increasing somewhat, while domestic conditions warrant the belief that continuing activity will be seen for several months to come. Domestic demand for goods, both for immediate and forward delivery, is large, and there is sufficient buying power in evidence to insure the maintenance of current production, provided, of course, no untoward circumstances arise, says the Mechanics & Metals National Bank in an optimistic prediction of the business outlook. Activity is not at the moment at high record, for though there are many favorable factors in the existing situation, those of an unfavorable nature have brought into being a spirit of caution which exercises considerable influence in the determination of business policies. This is not regrettable; caution insures against a runaway condition such as was threatened at the height of the buying movement earlier in the year. Also it contributes to stability and prolongs the period of prosperity which the country is enjoying.

It is a general hope that domestic demand will continue large, and that it will support business against any painful or disastrous reacton. The buying power of the American people has for years been a constant source of amazement to economists, and has repeatedly confounded predictions of calamity that were based on theories of overproduction. Two summers ago there were 5,000,000 working-people without employment throughout the country, and grave concern was felt thereat. Practically all of these people have full employment today. Only a little while ago the war-time expansion of our industrial plants brought about a technical situation in which it was believed there would be no need for expanding manufacturing plants for a long while to come. Many of these plants had come to a point where their capacity was believed to be far beyond current needs. In face of this belief, there has been a pronounced expansion, and still the supply of manufactured goods has fallen short of demand.

Moreover, the railroads and many of the public utilities have carried forward important betterments, while public improvements by states and municipalities have been of extraordinary magnitude. Then, too, there is the item of new building construction, both for business purposes and homes, which has literally absorbed billions of the people's saving in the past few years, and which, in spite of the continuance of high prices, gives promise of absorbing a great deal more.

Considering the country as a whole the demand for the things that contribute to life and comfort has been amazingly large, and has given another example of the wealth and tremendous buying power of the American people. The productive capacity of the United States is the greatest of any nation on earth, and the wealth of the American people is a measure of their ability to pay for what they buy. In addition, the borrowing capacity of the American people is another measure.

THE USUAL LINE OF ANTI-DOPE

A few days ago the newspapers carried a news item from Copenhagen, which read as follows:

"Many of the delegates to the Anti-Alcoholic Congress here are holding special meetings at which measures to combat the use of tobacco are discussed.

"Professor Martin Hartmann, of Leipsic, addressing one of the meetings, dilated upon the injurious effects of excessive smoking. He contended that had Lord Carnarvon been a non-smoker he would have survived the illness with which he was stricken while in Egypt. Smoking, he added, tended to retard growth and had caused a reduction in the average height of Americans and Englishmen in the last century."

That is just the kind of nonsense the anti-tobacco agitators are always using. There is not the slightest evidence producible to indicate that smoking ever injured Lord Carnarvon in any way. His death was due to pneumonia, following a severe attack of blood poisoning, caused by the bite of an insect.

The assertion that the average height of Americans and Englishmen is diminishing as a result of tobacco smoking, is quite as baseless as that regarding Lord Carnarvon's death.

Better hygienic conditions, better living conditions and outdoor exercise and sports are greatly improving the physique, health and height of all English speaking peoples. We must look to the crowded slums in the large cities of all countries to find people who are diminishing in height.

When the anti-tobacco crusader gets tired of his present occupation, we may expect to hear of him raising strenuous objections to the use of wheat flour in the manufacture of bread, or railing against the corrupting effects of ice-cream.

The fact is, tobacco smoking has been thoroughly tested by mankind during many centuries, and has been found exceedingly beneficial. It does not injure health in the slightest manner when properly used, but exerts beneficial effects upon the brain and nervous system, and acts as a germicide for the bacteria in the mouth and teeth. It is also a valuable antiseptic for the stomach.

Smokers can well afford to smile at the tirades of the enemies of tobacco and pity them for their misguided activities.

FIVE YEARS TO MAKE A CIGAR

It takes from three to five years to make a cigar. That is to say, every cigar represents an investment of labor of three, four or five years, and, in the aggregate, millions of capital tied up for that time. The actual making of a cigar in the factory is really but a minor process in the long line of operations. What counts most is the careful, expert preparation and the skillful blending of the tobacco. No sooner has the leaf passed into the hands of the agents of the manufacturer than there begins a series of most important steps, calling for a wide range of technical skill in the perfecting of the raw material, that treatment of the tobacco in storage which gives it the flavor, the mellowness and the sweetness which comes with age.

"From three to five years' imprisonment in the warehouse," is the sentence imposed upon each and every crop of tobacco leaf that goes into the manufacture of American cigars or cigarettes. That is to say, there are from three to five crops as many years old continuously being mellowed by age in the warehouses.—*Vinton (Ia.) Eagle.*

NEXT THE WEED

Apparently satisfied that the war against r has been won, some of the delegates to the A Alcoholic Congress at Copenhagen are turni their attention to the other great scourge mankind, tobacco. (Coffee can wait until ni tine has been abolished.) The chief speaker w Professor Martin Hartmann of Leipsic, wl though a German by the accident of birth, see to have a truly American heart. Smoking, tells us, killed Lord Carnarvon. It was perha a little injudicious of the Professor to say since millions of earnest people believe that C narvon was slain by the vengeance of the Eg tian gods; and the people who believe that on the whole the same ones who will believe t Carnarvon fell a victim to nicotine. But perha the far-sighted Egyptian gods foresaw that nic tine would be discovered in time to lay avenging blight on the impious explorer.

Professor Hartmann said something e which would cause grievous searchings of t heart in this country. "Smoking tends to r tard growth, and has caused a reduction in t average height of Americans and Englishm in the last century." Look about on the stree at our dwarfed and shambling race; go out to t tennis courts or the golf links; look over t crowd in the Yale Bowl at a football gam Puny, stunted, anaemic young people—are th fit to breed another generation which by the i evitable law of the smoker's progress must even worse? Some of our native savants ha warned us of the evil effects of the cigarette the modern girl. Look at her, a shriveled, bloo less, helpless creature, coughing her life away sedentary listlessness, fainting from sheer weak ness at the slightest excuse—how far degenerate from her mid-Victorian grandmother, who coul support the weight of corsets and crinolines b cause she had never sapped her vitality with t cigarette!

One thing only this fearless prophet omitte He should have reminded the congress of t famous revelation by the first of the now-it-ca be-tolders, The Rev. Dr. Clarence True Wilso of the Methodist Board of Temperance, Pro hibition and Public Morals, who told us a fe years ago that the Tobacco Trust had sent dope cigarettes to our army in France, and that sol diers had to be taken out of the line because the were sapped and corrupted by the drugs. Pro fessor Hartmann should have been intereste in the explanation of the way Germany won th war.—*New York Times.*

TOBACCO MANUFACTORIES

The suggestion dropped a few days ago by the local manager of the great Dun mercantile agency at least opens the way for a serious consideration of the development of a new and powerful factor in the industrial life of Wilmington—that of tobacco markets and tobacco manufacturing.

It will perhaps require an expert to finally determine the exact value of such an undertaking, but to a casual observer the scheme certainly seems worth some investigation. We would naturally suppose that the first step would be establishment here of a receiving warehouse and with the later development of tobacco manufactories, such as those at Winston-Salem and other Piedmont cities.

And while we are looking into the feasibility of this plan it will be well to consider the fact that the city of Wilmington now owns at the old Liberty shipyard a mold loft, which would be an admirable location for a tobacco warehouse. As mentioned in a foregoing paragraph we are not sufficiently versed in the tobacco trade to say offhand what the possibilities or the handicaps might be in an undertaking of this sort, but unless we are sure it would avail us nothing, we believe it would be well to give the matter some grave consideration.—*Wilmington (N. C.) Star.*

A quarterly dividend of 1¾ per cent n been declared on the preferred stock the American Can Co., payable Octo- r 1, 1923, to stockholders of record at close of business September 14, 1923. ansfer books will remain open.

The "Cut Out" May Keep Prices Up! But—

LEXINGTON, Ky., Aug. 27.—With loose f auction houses preparing to open for sale of the 1923 tobacco crop Decem- r 1, a formidable movement has been rted in Central Kentucky to cut out 1924 crop. Tobacco growers of sev- l counties have endorsed the move- nt and others have it under consid- tion. Bourbon county a week ago, l Scott county Saturday, by almost nanimous vote, decided that the best y to handle the problem of over- duction was to "cut out" the crop irely for next year. In Fayette county Saturday, growers deferred action on the proposition until "later in the season," but it was quite evident that the sentiment in favor of a cut-out in Fayette is strong.

J. D. Clark, former secretary of the old Burley Tobacco Society, and later secretary of the Burley Tobacco Co., declared there was a "moral obligation" on the growers to raise a crop. He did not think the carry-over of the Burley Tobacco Growers' Co-operative Association amounted to much, certainly not enough to warrant a cutout, and was of the opinion that there is no great surplus of Burley tobacco now on hand. When he offered a motion, however, that it was the sense of the meeting that a cut-out of the 1924 crop should be opposed, it received no second.

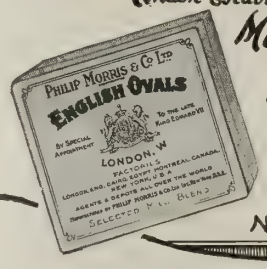
County Judge E. H. Doak declared himself willing to trust the entire matter of production and marketing to the Burley Tobacco Growers' Co-operative Association. "Officials of the association," he said, "will be able to handle the situation and to market any surplus to advantage. I am perfectly satisfied with the management of the association and with the prices I have received at its hands."

Others who took part in the meeting at Lexington, Saturday, were President Charles Land, of the Farmers' Union; J. H. Hostetter, S. D. Goff, Thomas P. Adams, J. Cloud Bosworth, George Christian, Thomas J. Denton, Hon. Arch L. Hamilton, S. P. Nunnelley, James P. Beatty, William Steele, of Woodford county.

A conference of growers of all central Kentucky counties is likely to be held soon, according to statements of leading farmers, to consider the cut-out proposition.

In the Keystone State

Leopold Holzman, of Strouse & Holzman, 197 Water street, is studying conditions in Pennsylvania and looking up his numerous clients in the Keystone State.



Covering Western States

W. P. Miller, of the American Sumatra Tobacco Co., is at present covering the western territory and is visiting the principal cigar manufacturers' centers.

Detroit Business Shows Considerable Buoyanc

General Situation Regarded as Good in All Lines—Ret Trade Beginning to Feel Effects of Increased Pay-Rolls Cigar Industry Growing by Leaps and Bounds.

DETROIT, Mich., Aug. 25.—The general business situation in Detroit is good. Factories in all lines have increased their output. Retail lines are beginning to feel the effects of increased industrial pay-roll, and bank deposits are climbing. The cigar industry is growing by leaps and bounds.

Detroit plants have all the orders they can take care of, in fact, some are still badly oversold. Cigarmakers are scarce, and some of our factories are displaying signs, "Cigarmakers Wanted."

Harry H. Parr (American Cigar Co.), Chancellor-Ace, has a very fine showing of attractive window displays throughout the city. Harry tells me Chancellors are selling better than ever, and are increasing in sales daily.

Going Some

Robert Emmet cigars (Spietz Cigar Co.), have little trouble in heading the list as the leading ten cent cigar in this market. The Fields Cigar Corp. has secured the services of Robert Emmet Moriarity to act as special Michigan representative. Mr. Moriarity is a salesman of marked ability, for the past six months having been associated with the House of Becker, local distributor, working the towns and lake resorts outside the city. Mr. Moriarity will take up his new duties Tuesday, September 4.

Sam Meyer, special United States representative for Cuesta Rey & Co., Tampa, Fla., is doing some splendid missionary work on Cuesta-Rey bonded clear Havana cigars, through the House of Becker, local distributor. During the past three weeks the sales force of C. F. Becker have opened up over five hundred new accounts on Cuesta-Rey cigars. Only the better dealers are being solicited. Mr. Becker reports the repeat business on Cuesta-Rey cigars very gratifying. Mr. Meyers will spend another week or ten days in Detroit, and then do some work for Lewis-Leidersdorf Co., Cuesta-Rey distributors for state of Wisconsin.

Showing Steady Increase

Sam T. Gilbert, president of Webster Cigar Co., reports the demand for Webster cigars showing a steady increase from all sections of the country. During July and August there was no let up in Production at the Webster plant. A new series of Bill-Board posters have just been placed throughout the city. This most expensive type of out-door advertising has caused a big demand for this great national brand and dealers throughout the city report sales increasing on Webster cigars by leaps and bounds.

E. A. Hasley, east side steam roller for Bernard Schwartz Cigar Corp., reports the sale of R. G. Dun cigars showing a steady gain daily. R. G. Dun is one of the most popular cigars in this market and enjoys a wide distribution.

Fred Charles, of The Charles Co., York, Pa., spent a few days in town this week, checking up on Conaza and Marshal Fields cigars.

Val Keogh (Preferred Havana Tobacco Co.), gave Detroit the once over this week, booking orders for Henry the Fourth cigars.

F. R. Brayard (Estabrook & Eato was a visitor.

Louis Galovin, of Mi Subrino fa Tampa and New York, spent a few d in "our midst" and left town with a w filled order book.

Tom Monroe, vice-president of Spi Cigar Co., entered Ford Hospital Fri night to undergo an operation for t silitis. This throat trouble has affec Tom's eyes considerably of late, a hampered him in his work. It is t writer's sincere wish, and also that his many friends in the trade, that i very few days he will be enjoying perf health again.—JIM.

South African Tobac Growing Increases

WASHINGTON, D. C., Aug. 29.—" bacco growing in South Africa has b steadily increasing during the past years, the area under cultivation at present time being 26,000 acres," say report just received by the Bureau Foreign & Domestic Commerce, f American Consul Pisar, at Cape To reporting on the tobacco trade of So Africa. He continues:

"A variety of different types grown in the various provinces. In Transvaal a light and medium tobacco the Virginia type is produced; in south central part of the Cape Provi a medium heavy type of Virginia grown; and in Natal a medium dark bacco is grown and used in the ma facture of cigars, and a cheap grade pipe tobacco; in the western part of Cape Province Turkish tobacco, such Dubeck and Soulouk, is grown. T bulk of the tobacco produced is of light to medium Virginia type. The 7 000 pounds of Turkish leaf grown d not meet the demand.

"The total production of all tobac grown in South Africa has been as f lows: 11,644,000 pounds in 1920; 620,000 pounds in 1921; 13,000,000 pou in 1922. Frost and wildfire have cau considerable damage to the 1923 cr which is estimated at 20 per cent bel that of last year. There are three operative tobacco societies in the Un of South Africa at present. The larg is the Rustenberg Farmers Co-operat Society, which handles between three four million pounds of tobacco annua

"In 1920 there were 66 tobacco ma facturing plants in the Union, employ 2,662 persons. Probably the largest bacco and cigarette manufacturers are United Tobacco Co., Ltd., and the W minster Tobacco Co., which are s sidiaries of the British-American bacco Co. There are no firms who port leaf tobacco other than the ma facturers.

"The local manufacturers have b using an increasing quantity of toba grown in South Africa and Rhode and a decreasing amount of Ameri tobacco. For instance, in 1916 the tobacco consumed consisted of 8,000, pounds of South African grown toba and 466,020 pounds of imported. 1920, there was used 12,500,000 pou

New Orleans News

NEW ORLEANS, La., Aug. 25.—The Louisiana Farm Bureau Perique Tobacco Growers' Association of St. James Parish, having complied with all the requirements of the Federal law, have been given a credit of $35,000 by the Intermediate Farm Loan Bank, recently established here. This was the first loan made by the federal bank of New Orleans to the farmers of this State, to whom, later on, it is purposed to extend loans aggregating millions. The funds derived from the loan to the Perique Tobacco Growers, obtained at 5½ per cent for six months, will be used by the Association in helping its members financially in producing, harvesting and marketing the 1924 crop of Perique. It is based upon receipts held by the association from the U. S. Bonded Warehouse for stocks of Perique tobacco already assembled and stored there, which were given as collateral to the Intermediate bank for the credit.

Out of Business

C. C. Snider & Co., distributors of a number of brands of tobacco and cigars, and operating six retail establishments in New Orleans, have gone into the discard. Its affairs are being liquidated as fast as possible and within the next ten days, it will only be a remembrance. Various reasons are given as to the cause of its withdrawal from this territory. The retail stores will be operated as of yore by the C. C. Snider Co., of Birmingham, the domicile of the parent plant, according to the officers of the company, though rumor has it that a great part of the stock of the jobbing house has already been stored with another jobbing house of New Orleans, in another quarter of the city, which may ultimately take over the operation of the retail stores, if satisfactory financial negotiations can be effected. The announcement that the company had decided to go into voluntary liquidation was brought a number of representatives of cigar and tobacco concerns represented by C. C. Snider Co., to New Orleans and the race for getting the most coveted of their goods for distribution by other jobbers here is proving an interesting one.

Marcus Schwed, representing the Reynolds Cigar Co., of Reading, Pa., is in the city.

Courtney Lewis, of the I. Lewis Cigar Co., of New York and Newark, manufacturers of Melba, John Ruskin, and Heidenberg's After Dinner Cigar, is remembered among visitors here.

G. Hardie, president of the Gonzales and Sanches Cigar Co., is expected here in the early part of September. Mr. Hardie is a product of the Crescent City, where the members of his family are well known and have taken a prominent part in the civic affairs of this city. The Crescent City Cigar & Tobacco Co. are distributors of the Gonzales & Sanches cigar.

Posts Cigar Slogan

The first company in New Orleans to placard the stores featuring the goods which it represents with the trade slogan recently adopted "After all, nothing satisfies like a good cigar," is the Crescent Cigar & Tobacco Co. It has had made, at its own expense, a number of handsomely printed and framed posters, bearing this trade replica, and has placed them on exhibit in all of the stores handling the tobacco products of which they are distributors.

Julius Kahn, of Shreveport, has moved into his new store. He had quite a chapter of mishaps before doing so.

Personally Conducted

"Jim" Fox, the energetic traveling representative of U. Koen & Co., and Harry Herzog, of the New York Tampa Cigar Co., who is spell-binding for the makers of Personality, made a very successful trip together, through north Louisiana. The new sizes of Personality are taking well in this territory.

Miss Ethel Jones, in charge of the country credit department of U. Koen & Co., distributors, has returned from a vacation along the Gulf Coast.

Among the prominent cigar stands of Shreveport may be mentioned the White Way, owned and operated by Edgar Davis. Davis bears an enviable reputation as a cigar salesman.

F. L. Kinney, vice-president of the Porto Rican American Tobacco Co., was in the city during the week and was warmly received by friends.

"Jimmie" O'Connor, the Porto Rican kid, a local cigar celebrity, is busy these days, when not gumshoeing for business, watching the sacrifice sales of department stores, haberdashers and dealers in gents furnishing goods. Nothing escapes him. He is "hep" to everything, in and out of the business.

J. W. Berengher, importer and exporter, has been compelled by overwork to seek the solace and quietude of that delightful Gulf resort, Grand Isle, to restore wonted energy and regain his good physical condition, impaired by hot weather and too close application to business.

Esther Hincks, proprietress of the Continental Hotel cigar stand at Shreveport, has had the satisfaction of seeing the business under her management spread out like a green bay tree.

T. M. Crosby, division manager of Liggett & Meyers, has returned to headquarters here from a short trip to Bogalusa and points along the Ill. Cen. R. R. He reports a good demand for Dinner Bell smoking tobacco in the territory visited.

"Wash" Davie has opened a cigar store at Bogalusa.

W. A. Thomas, representing Bayuk Cigars, Inc., of Philadelphia, passed through the city, after a very successful trip to Little Rock, Hot Springs and Shreveport. He reports conditions good in the territory visited by him.

Chesterfield and Coupon cigarettes are reported by the New South Cigar & Tobacco Co., as being in greater demand than ever and meeting with a ready sale.

"Joe" Hymel, vice-president of the New South Cigar & Tobacco Co., has returned from a short trip through the territory contiguous to New Orleans, with orders for over 150,000 Country Clubs, a five-cent seller, put up at Windsor, Pa., by W. H. Snider & Son.

F. A. Gonzales, son, distributor of the Optimo and other brands of cigars, an old landmark at 817 Gravier street, from October will hold forth at 329 Carondelet street.

U. Koen & Co. are making energetic efforts to keep the Portina cigar in the front rank in New Orleans, if this can be effected by a liberal patronage of the advertising columns of the local newspapers and attractive displays of products of Porto Rico in the display windows of their several cigar stores in this city.

The Tourist Shops have attractively displayed in their windows the L-A, a ten-cent seller, the product of Lopez, Alvarez & Co., of Tampa. This is the

initial introduction of the brand here.

Sets of sweet, natural corn cobs, at 35 cents, effectively displayed by clerk Lionel Larrieu, grace the show windows of Max Guiraud.

The Schulte stores are playing up strongly imported Manilas, in bundles of ten, selling for 35 cents. They are said to be taking well.

Ubaldo Trelles, of M. Trelles & Co., who looks after the packing and shipping of their product, has got his hands full these days filling incoming orders of the factory. The volume of their business has increased so greatly that it has been found necessary to crowd in a number of more operating tables. A recent order from Texas which was shown the representative of TOBACCO took up six figures.—CRESCENT.

Deny Trade Complaint

SHINGTON, D. C., Aug. 29.—Lawler gnan of Los Angeles, Calif., have an answer with the Federal Trade nission in Docket 1032, which is the ission's case against the American co Co. on behalf of the Los An- Conference, its members and secre- The members of the conference omposed of a number of grocery s, commercial firms and tobacco anies. General denial of the com- mission's complaint in so far as the conference and its members are concerned is made in the answer filed by the attorney.—LAMM.

Federal Crop Report

WASHINGTON, D. C., Aug. 29.—Tobacco made good progress in practically all districts, according to the Bureau of Agricultural Economics of the Department of Agriculture in its semi-monthly crop report, though there is some complaint of too much rain in a few areas. The report continues:

"In the New England States harvesting of tobacco is well under way and the crop is one of the best in years both in yield and quality. The crop in Pennsylvania is showing improvement since the rains. In Maryland and Virginia the crop is doing well, but in some parts of Kentucky the crop has been injured by too much rain. The crop has been benefited in Ohio by recent rains.

"In Virginia topping and priming have progressed favorably. Preparations are being made for curing in the Bright Belt in this State. In Kentucky the early-topped is beginning to ripen in the central Blue Grass counties. The late crops are growing fast and topped crops are spreading rapidly, following recent rains. The crop is irregular but generally promises a good yield in both Kentucky and West Virginia. Too much moisture in the latter State. The crop in Ohio has been benefited by recent rains."—LAMM.

Co-op. Suit Holds Interest

HOPKINSVILLE, Ky., Aug. 27.—Interest in the suit of the Dark Tobacco Growers' Co-operative Association against R. H. Mason, a member, of Robertson county, Tenn., which was tried at Springfield recently, has not abated with the passing of the case. In their findings the jury decided a few points in favor of Mason, who was sued on his contract on the grounds that he had violated his agreement by selling most of his tobacco outside the association.

Judgment was not passed at the conclusion of the trial, Judge Stout setting September 14, as the date for this. Both sides profess to find consolation in the jury's verdict.—M. E. BACON.

Cutting Prematurely in the Dark District

HOPKINSVILLE, Ky., Aug. 27.—Despite the positive statement that open, sunshiny weather will put a stop to the spread of blackfire in tobacco, which was made here by Dr. W. D. Valleau, plant specialist of the Kentucky Experiment Station, and the advice from him that tobacco should not be cut until fully ripe, unless the rains continue, many farmers throughout this section are rapidly cutting their tobacco. In some sections it is said the bulk of the crop has already been cut, and most of it was cut green in order to "save it" from the blackfire. —M. E. BACON.

imated Tobacco Crop Conditions August 1, With Comparisons

VASHINGTON, D. C., Aug. 25.—The United States Department of Agriculture orth the following tobacco conditions, as of August 1, with comparisons.

	Condition Aug. 1		Production

Connecticut Notes

RTFORD, Aug. 25.—The yield of to- throughout the Connecticut Val- the largest and soundest that has harvested for many years.
ing the past week the temperature d to 42 degrees. The growers l the warning that early frosts approaching and speeded up the of harvesting, as the tobacco had i during the cool weather. The growers are already taking down priming." These first "primes" e placed in the sweat rooms at and the work of assorting will s soon as the tobacco is ready to on. Growers are hoping for an- good month, so that the crop will own without "pole sweat."
n the Havana seed of the 1922 old, and with prices soon to be on the Broadleaf, it is generally ed that the first year of the Co- sociation has proved successful, at the tobacco business in the ticut Valley is on a better basis ver before. Growers are en- tic over the results and are mak- parations for the handling of the rop in conjunction with the As- n.
Glastonbury Tobacco Warehouse ation is to file articles with the ry of State by the committee ap- for that purpose, consisting of Tryon, W. G. Phelps, W. H. and A. E. Bidwell. Capital s $100,000 of preferred and $105,- common. The par of the pre- stock is $25 per share. This stock e sold to the general public and ay 10 per cent. One quarter of ck is to be retired annually. The n stock is $10 per share; to be the members of the Association. xpected that the corporation will ted with a capital of $80,000.
lay night, the third and fourth s of East Hartford held a meet- d voted to buy the E. Rosenwald warehouse on Clark street in Hartford. This warehouse was Sutter Bros., of Chicago. It has ad siding at the door, and is a ry building, 50x120 feet, with oom capacity of 2,000 cases and ge capacity of 7,000 cases. This use will be operated by the East d Tobacco Growers, Inc., with a stock of $50,000. It is proposed to y handle tobacco, but to handle for the growers, such as paper, arm implements, etc.
South Windsor Tobacco Growers, e to organize a warehousing cor- n, and have appointed a commit- file articles of incorporation with retary of State. The committee es L. W. Newberry, G. O. Case, Thresher, J. J. Riordan, E. D. m, W. A. Skinner and O. F. The capital is to consist of $50,- ferred and $55,000 common stock. eferred stock is to be sold at $25 and may be bought by anyone. mmon stock, at $10 per share, is old to members only. Other dis- ay provide themselves with ware- oom as the season advances.

Dr. Chapman's Successor

ssor Charles M. Slagg, who for years has been engaged in to- experimental work, especially in dy of tobacco diseases, has been d director in charge of the to- ab-station of the Connecticut Ag- al Experiment Station in Wind- nn., and also research director and secretary of the Connecticut Valley Tobacco Improvement Association. Professor Slagg was formerly assistant pathologist with the United States Department of Agriculture, Bureau of Plant Industry, Office of Tobacco Investigation, and for the past three years has been conducting experiments in the study of tobacco diseases in the Connecticut Valley. Prior to this work in Connecticut, he made similar studies in Wisconsin, Kentucky and Ohio. He is a native of Wisconsin, and was reared on a farm in the heart of the Wisconsin tobacco district. During his training at the University of Wisconsin, at Madison, Wis., he received the degree of Bachelor of Science in 1917 and Master of Science in 1919. He succeeds Dr. Geo. H. Chapman, who recently resigned to become assistant general manager for the Porto Rican American Tobacco Co., after having been for two years joint director of the sub-station.

The sub-station is located in Windsor and embraces thirteen acres. It is doing valuable work and has already worked out many tobacco problems. It is planned to increase the efficiency of the station by the erection of an office and laboratory building. This building is to have a sorting room, warehouse and rooms for curing experiments; also a greenhouse to facilitate growing plants during the winter.

Unsatisfactory Labor Situation

Considerable trouble has been experienced in getting competent labor to harvest the crop. In East Hartford one man started in with a gang of 55 and within four days all but four had left to work at other places. Another man was employing four boys, paying them $4 per day. They asked for $5 and being refused left the field at once. The range of wages is from $2.50 to $7.50 per day. The unskilled laborer wants the highest wage, is indifferent about how much he does, and the minute the boss's back is turned, lays down on the job.

The town school committee of East Hartford has postponed the opening of the schools until September 10 at the request of prominent tobacco men, so that the children may assist the growers in completing the harvest of their tobacco crops.

It is announced that the L. B. Haas & Co., Inc., of this city, will operate the Porter warehouse in East Hartford this winter.

Ernie Hatheway, of the firm of Hatheway & Steane, of this city, accompanied by his wife, are now on the "briny deep," bound for Europe.

Carl Schoverling is back in the tobacco game, and is now with A. & S. Hartfman, superintending the shade grown end of the business.

Pleased with Connecticut Crop

Isaac Meyer, head of Isaac Meyer & Co., 160 Water street, has returned from an inspection tour of his Connecticut plantations, and is highly gratified with the favorable conditions of the crop.

In the Pine Tree State

E. H. Kohlberg, of E. H. Kohlberg & Son, leaf merchants, 144 Water street, is spending his vacation in the salubrious atmosphere of the Pine Tree State.

Windy City Visitors

Emil and Joseph Wedeles, leaf dealers, of Chicago, made a thorough inspection of the New York and Hartford markets last week.

nville Getting Good Crop Reports

ANVILLE, Va., Aug. 28.—Reports of rovement of the tobacco crop in this ion continue to be received. This is idered the critical time for the crop, much will depend on the weather litions between now and the housing he tobacco. It is expected that 80 cent of the leaf in this section will e been housed and cured by Septem- 15. There has been an agreeable dom from hail storms so far this sea- ; only one of consequence being re- ed, and that was on the fringe of the belt.

he sudden descent of cold weather y in the week, accompanied by a sus- ed chilling rain, aroused some appre- sion, it being feared that prolonged now would promote second growth the leaf, with deleterious effect. rmer weather has come and the pros- ts of a successful harvest just now good.

he date for the opening of the auc- houses has been set here for Sep- ber 25.

he Co-operative Marketing Associa- officials are unable to state with niteness when the deliveries will be le here. E. L. Walton, local manager the Association, states that since the sonnel used here is at present scat- d about South Carolina, it will be ossible to begin receiving tobacco in old belt until after the South Caro- season is over. Mr. Walton be- es that this will not be before Octo- 1. He has just returned from the th Carolina markets and reports that Association has received about fifty per cent of all the tobacco marketed. Reports from sources hostile to the Association are contradictory on this point.

Mr. Walton was asked when he thought that the third payment would be made to farmer-members of the association on the crop they delivered last year. He said neither he nor anyone else in the Association could state this definitely. The final distribution will be made as soon as collections have been made on tobacco ordered by buying firms. He emphasized that the payment would come as quickly as possible, for the Association recognizes that making the final payment would have an encouraging effect on the morale of the growers, many of whom are reported to be irritated, if not restless, over the delay.

Mr. Walton stated that as soon as acceptances on tobacco have been received an announcement will be made to the farmers when they can expect their money. He said that the Association would not sell such unsold tobacco as they have on hand at a sacrifice to expedite the final payment, but would wait for the price.

Interested in North Carolina Case

A good deal of interest has been displayed over the legal battle at Greenville, N. C., where during the past week a test was made of the contract, or more especially, that agents of the Association misrepresented things to farmers whose signatures to the five-year contract they sought. Testimony as to the salaries of the higher officials was heard with particular interest, especially the disclosure that Richard R. Patterson, manager of the leaf department, and former Danville resident, was receiving $30,000 per annum from the Association for his services.—TETLEY.

Paints Gloomy Picture

GREENVILLE, N. C., Aug. 26.—Tobacco conditions are bad. In the last two weeks the damage in every way has been unusually great. Farmers in many instances could not handle curing to keep up with the drying up on the stalk. Much has been lost from this cause. Then, too, barn room was lacking and though curing was rushed, barns being emptied and refilled as fast as possible, tobacco ripened faster than it could be handled. In the way to cure, suckering was neglected and progressive suckers sapped the life from the leaf. Much tobacco had taken second growth, was extra green and poor, and could not be cured with any degree of satisfaction, and will sell for little on the market. In addition to all this and the wet weather, worms have been picnicking for quite a while and their work has injured much good leaf.

Therefore, what at one time looked like a very fine bumper crop, is now only an average or below average crop in both pounds and quality. The damage is about the estimate, and now two-thirds of the crop expected will be a most agreeable surprise to the farmer. Yet, there is much good tobacco. The farmer whose tobacco was early, got good tobacco, made good cures and may expect good prices. But there is so much late tobacco, half-dried-up and badly cured, thin, coarse and of poor quality, that the average must be lowered both in grades and prices on the market.

The market opens Tuesday. There will be large quantities on the floors, but not one of the big opening sales as in the past. Good prices are expected for the better grades. Some say the low grades will sell high. Six large warehouses with triple sales can handle a big sale. A few loads of tobacco have already been brought in, ready for the opening. The Co-op house is ready to receive the pooled tobacco.

There is little change in the personnel of the buying force. The only change in the company buyers is the retirement of T. A. Person from the partnership of the Southern States Tobacco Co., one of the largest independent buyers on the market.

Cigar Box Fillers Give Cedar Odor to Cigars

Cigar boxes made of cedar have always been regarded by manufacturers as necessary to produce the best grade of cigars, but the growing shortage of this material and its increasing cost has forced many of them to use substitutes which lack the quality of fragrance which makes the cedar desirable. The problem has been to find a cheaper wood that could be used and so treated that it would give the cedar aroma to cigars packed in it.

The United States Department of Agriculture has been at work on this problem, and has tried to add the quality possessed by the cedar to more or less woods such as poplar, tupelo gum, and redwood. Specially treated paper inserts have been used in boxes made of these woods and manufacturers who have tried them have made very favorable reports. The work is not finished, but there is every indication that the method will prove practical. Nearly all of those who have tried the inserts report that the artificial aroma produces results similar to that of true cedar wood boxes.

Paducah Prospects

ADUCAH, Ky., Aug. 25.—There is no es to report of sales of hogshead to-co during the past week, but there been much inquiry for both leaf and ; but lugs are very scarce and prices e advanced materially during the past eral weeks. Some lots of old common are available at 6¼ to 7½ cents, t there are none of the '22 crop to be . There has been considerable in-ry for both common and medium leaf, no sales have been reported.

he past week has been very hard on growing crop. Too much rain and l weather, besides it has been stormy this has done some damage to the wing crop. The worst trouble is k fire which has started and seems to spreading. This is scaring people into ing too early and a good deal of to-co is being cut and housed before it ady, consequently will not make as d quality or as heavy yield as it ld if left in the field until it was thor-hly matured. The cold weather is on the crop, keeping it from finish-properly and the cold, damp weather utting too much sap into the plant hindering it from maturing properly. he crop in the field is the best look-one that we have had for years. ge growth with good leaf, and if we d have a few weeks return of hot, weather there would be a great im-ement over what it is at present. We hoping that weather conditions will me more favorable, and that we will e a really good and useful crop of to-co, but the conditions at this time are nearly as favorable for good quality few weeks ago. Farmers are being ed to leave their tobacco standing as as possible before cutting in order make good quality and heavy yield.

he Dark Tobacco Grower's Co-opera-Association has about perfected s for an intensive drive for an in-sed membership, but farmers gen-ly are so busy and their time taken up in looking after their crops, that but little has been done, but no doubt this work will be pushed more vigorously from now on.—W. B. KENNEDY.

Burley Co-op. to Have Plants in Missouri

LEXINGTON, Ky., Aug. 25.—Director of Warehouses Ralph M. Barker, of the Burley Tobacco Growers' Co-operative Association, has returned from Missouri, where he made arrangements for the opening of receiving plants at Weston and Dearborn so that the tobacco growers of that state who have joined the Burley co-operative may have convenient receiving plants at which to deliver their crops.

Mr. Barker endeavored to purchase the tobacco warehouse at Weston, but being unable to do so at what he considered an advantageous figure to the association, leased ground from the Burlington Railway and will erect a receiving plant. At Dearborn negotiations are under way for the purchase of a plant, and if these fail, the same course will be followed at Dearborn—land will be leased and a plant built.

With more than 500 growers signed in Missouri, representing 2,656 acres and about 3,000,000 pounds Mr. Barker said, the farmers are glad of the opportunity to market their tobacco co-operatively. The plants to be provided for these growers will be ready by the time the usual delivery season begins.

Mr. Barker said that growers still are signing up rapidly and that the Missouri farmers are a fine lot of men, deeply interested in the welfare of their state and their communities. He said the tobacco crop there this year is good.

Barker Not To Resign

Mr. Barker said there was no foundation for reports in one or two of the newspapers that he would resign his office September 1.

Pennsylvania Growers Start Harvesting the Cr

Havana Tobacco in Lancaster County Well Along in Curi Process—Taking on Desirable Hue—Crop in Good Con tion—Buying May Start Early—Views on Industry.

LANCASTER, Pa., Aug. 27.—The 1923 crop of seedleaf is going under the cutter. Several growers have started harvesting their tobacco, and the sheds are beginning to fill up. The Havana crop in the county is well along in the curing process, and is already taking on the rich brown color of a good crop. A series of showers during the past week have served to raise the growers' expectations of a good crop, and it is safe to forecast that the remainder of the season will see more rain. The crop is in good shape to take advantage of any weather the least favorable since the adverse conditions earlier in the season served to promote the development of the root systems of the plants—a valuable thing for the crop under conditions such as have existed this year.

Buying will commence early, if the number of buyers looking over the tobacco in every section of the county may be regarded as an indication of the interest felt by the manufacturers. The scarcity of crops of extra fine quality may be a contributing factor, although there is much tobacco which will pass muster as very acceptable cigar leaf. The greater part of the entire crop is fairly well developed, and is just in that stage of growth which will respond quickly to rain and will, before the first frost, be of higher than average quality if the expected rain materializes.

Unmistakable evidence pointing to the gradual process of evolution, which is slowly changing the structure of the Lancaster cigar leaf world, is now more apparent than ever, as events shape themselves for another buying season. Centralization is the keynote of the new era which is beginning to take definite form. What has already happened in many other industries, including the tobacco manufacturing industry, to a great extent, is now taking place in the marketing and packing of cigar leaf.

"The little man is getting smaller and the big man is getting bigger," does not exactly apply to the local situation. In the new interrelation of packer, grower and manufacturer, the little operator has a place, but assumes a somewhat different role than formerly. He is the last link in the chain of small cigar manufacturer, jobber, packer. The small manufacturers will, if events pursue their present course, be eliminated in the course of time by the cessation of demand for their goods, which is coming in natural sequence to the preference for nationally advertised brands. With the passing of the "buckeye" cigarmaker will of a necessity come the passing of the jobber. Eliminate the jobber and you have no outlet for the leaf packed by the country and independent packing concerns, except the market created by the demands of the large manufacturers.

Upon this factor the continued operation of the independent packer hinges. He becomes, in a sense, a speculator who must depend upon the continued power of the market to absorb the entire crop of Pennsylvania for his existence as an operator. Many of the small country packers have already met this change, and find an outlet for their annual packings in the large cigar concerns. Only the larger independent packers still sell an appreciable portion of their goods to the jobbing trade, and this business grows less every season.

Prohibition and the smoker's preference for the nationally advertised brands have been the two major factors to hasten this process of change which has been going on for the past ten years. Piece by piece the new marketing machinery has been slowly t together, and so small have been successive steps in the evolution t they take on significance only wh viewed in the aggregate over the p decade.

Prohibition has contributed its influence through closing up the cor saloon which was the chief outlet the small manufacturer. Tobacconi can furnish ample testimony that demand for cigars is confined chiefly nationally advertised goods. smoker has been told what to exp in this type of smoke, he does not kn what he will get from an unadverti cigar—and the iterative power of printed page scores another victory.

Stimulus is being given the ch cigar industry at the present time the prospective holiday trade. The flux of Christmas orders will soon arriving and will serve to bolster the waning trade over the fore part the winter season at least. The sm cigar manufacturer in Lancaster cou has become almost extinct, and most the factories employing only a few cig makers each, have closed their do All of the hands released by the clos of these numerous small plants have b absorbed by the factories of the big c cerns which operate in the cou These factories have been taking additional labor for some time, wh would serve to indicate, perhaps, t the cigar business is not on the decl as much as some of the more pessim tic soothsayers would have us believe KEYSTONE.

York County News

YORK, Pa., August 7.—York Cou was visited last Wednesday by the co est August weather in 38 years. As th were indications of frost much conc was felt by growers for the 1923 toba crop, of which there are about 2, acres. An investigation has revealed t the frost was confined almost entirely the lowlands of the county and the bacco crop has suffered no injury.

C. O. Meads, of Red Lion, the wh sale tobacco packer, who only recen made several tours of the tobacco gr ing section of the county and inspec the crop, states that this year there approximately 300 acres more plan than last year. In 1922 there were 1, acres.

York County has not yet gone back it pre-World War record in raising bacco. Prior to our overseas cont versy, between 3,500 and 4,000 acres w set out in tobacco. Many of the far ers reduced their tobacco acreage raised vegetables in larger quanti which were disposed of to the canner

Since there is not the same incentive intensive raising of vegetables and w promise of better return from the rais of tobacco, it is likely that the Y County farmer will turn to increased p duction of that crop.

The 1923 tobacco has really just star in recent weeks to grow properly. account of unusually dry weather, farmers were late in setting out plants. The lack of rain hindered progress of the plants. Recent rains h brought about the growth, howev which had been retarded by the drou and the tobacco looks as good in field as it has for years.

Danger of Frost

cise of the danger of frost, the county tobacco crop will have to u before October 1. If there were rcs, it could continue to grow until sias. As a consequence the tobacco lve to be cut before it has fully e It may as a result have a n taste and tint. It will hardly i for binders. It is a question h it can be used for domestic ci- is said, and the probability is rst of it will be exported.

eYork County tobacco crop in the fe years has been practically all h ed by Mr. Meads, who disposes broad. He will this year again nst, if not all, of the crop.

New Branch Factory

eSuperior Cigar Co., composed of n S. Sechrist and William C. ir, which conducts a large cigar r on West Broadway, Red Lion, ned a branch factory at Yoe, this t The firm manufactures Pay ank Note and Kalo brands. An ill be made to produce an output 00 cigars a day, and the firm will t produce high-grade 5-cent cigars. Between 40 and 50 cigarmakers will be given employment.

The factories of the Red Lion Cigar Box & Lumber Co. and the Consumers Cigar Box Co., of Red Lion, are running close to capacity.

Praises Tobacco Agency

Ramon Moran, an important grower and packer, of Manate, Porto Rico, is in New York for a few weeks' visit. Interviewed by a representative of TOBACCO, he stated that the crop was a very large one this year, and was one of the very best produced on the island. He expressed the view that many of the farmers would curtail their crops next year.

Mr. Moran praised the work of the Government of Porto Rico Tobacco Agency, and the wonderful publicity it has given to Porto Rican tobacco. He fully endorsed the forthcoming Tobacco Exposition and said that he intended to exhibit some of his own tobacco at the show. Tobacco from the Moran Vegas is being manufactured into one of the greatest selling cigars in the United States.

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

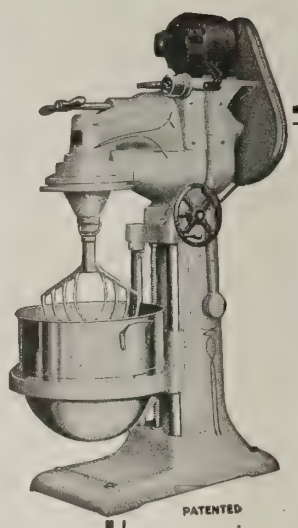
The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them



Marshall Field wrapped with finest Vorstenlanden Java.

Making Progress

... & Pena, 1536 Columbia avenue, of which the three brothers, Frank, John and Edward Paltavull, are proprietors, are conducting an extensive publicity campaign on their three leaders, Mi Ydillo, Mi Escudo and Beldad, particularly the latter, which is being pushed because it is more readily pronounceable by the public, in the opinion of John Paltavull, who shortly will leave for Havana to buy leaf. It is only during the past year that the firm has been making direct importation of its own Havana which is combined with Sumatra and Connecticut in making up its brands.

Opening New Accounts

Many bright prospects for the fall business of the newly organized Associated Cigar Manufacturing Co., 1039 Race street, have been forecast through the results of the recent visit in the New York state and Ohio territory by George I. Watson, of the firm. Mr. Watson has just returned to headquarters with a well filled order book and plans are maturing for the opening of several large additional distributing fields immediately after Labor Day, for the firm's leaders, Rey Oma and Dependo. Both are long established brands, recently taken over by the new organization of old time tobacco men, who form the company.

Usually Busy

The busiest fortnight in its Philadelphia history is reported by the General Cigar Co., Inc., local branch, 1147 N. 4th street. There are now at work between 600 and 700 hands, engaged principally in the production of Van Dykes and Robert Burns, in standard sizes. The Superintendent of the local branch is M. Kunis.

Concentrated Production

All the manufacturing of King Perfectos is now centered in the local factory of the Kicico Cigar Co., which recently took over the entire five-story building at 9 South Bank street. Here are employed over 150 hands producing the King Perfecto in three standard sizes, all under the general management of A. N. Davis. The King Perfecto long has enjoyed a reputation in the New England territory, where for many years it was manufactured in the Hartford factory of the King Cigar Co. It is a particular favorite in the Schulte chain stores in that section.

All the production of the Natrona Tobacco Co., 419 Locust street, manufacturers of cigarette specialties, is being devoted to private trade. Before war days the Natrona Cigarettes enjoyed a large exportation trade to English territory and since the rates of exchange have been demoralized the business has been confined to local private distribution, under the direction of proprietor William S. Stevenson. Mr. Stevenson recently acquired the entire five-story building he now occupies, removing there from the old location at 16th and Sansom streets.

Box Factory on Full Time

Following the resignation of Marie Hunt, office manager of the Monroe Jarrett Sons, Randolph and Jefferson streets, cigar box manufacturers, who left on a honeymoon, Miss Christine Carsner, has been advanced to the post. The factory now is running full time and, with the new equipment just put into operation, has an output of just twice that of a year ago. Two sons of Orvis Jarrett, of the firm, Donald and Roscoe, were removed during the week from their home in Quakertown to the hospital in Sellers-

Does "Cut Out" Show Lack of Confidence in Co-op

GEORGETOWN, Ky., Aug. 25.—Scott county tobacco growers voted in favor of a motion to cut out the 1924 crop of tobacco at a meeting here this afternoon.

About 300 farmers were present at the meeting and were almost unanimously in favor of the cut-out.

Fred Aulick, county road commissioner, called the meeting to order and told the purpose of the gathering. He invited anyone present to express views on the question. Several short talks were made in favor of the cut-out of the 1924 crop.

A. L. Ferguson, who has been investigating the situation, stated that there was only 36,000,000 pounds of last year's crop unsold and that this did not point to an over supply. He urged the farmers to defer action until a later date. Mr. Ferguson stated "We control this situation and we mean to maintain the price of Burley tobacco so that we can make a living out of it."

Some discussion followed, after which a motion was made that "The sentiment of the Scott county growers is in favor of a cut-out of 1924 crop." Almost every man in the large crowd in attendance voted in favor of the motion. Beyond the passing of this motion no definite action was taken at this meeting.

Surveys Southern Crops

F. M. Arguimbau, of the American Sumatra Tobacco Co., is surveying the Florida and Georgia crops, and is highly pleased with the outlook in the two southern states.

The "Demuth Bruyére"

When William Demuth opened a small shop in Liberty street, New York, in 1862, it was his one and only thought to perfect the finest pipe in the world, giving it his name. This thought guided and inspired the Demuth organization throughout its growth to the world's largest makers of fine pipes—to perfect the finest—and, as the result of their untiring efforts, the trade will soon see the "Demuth Bruyére," the supreme achievement in the pipe-making industry.

When pipes were gaudily mounted pipe whose beauty would rest in its graceful, delicately-balanced line and simple, yet dignified, design—its worth would be vested in the perfect quality of its materials and the skill and artistry used in its manufacture.

Now, it is no uncommon sight to see a gentleman resting comfortably in his favorite chair at the club with his pipe. One can see men smoking pipes in the most elite hotel lobbies, in exclusive clubs, and on fashionable avenues. The pipe that appears in such surroundings must be dignified and beautiful in appearance, as well as serviceable.

They smoke white cigars in Burma—big ones! The women of Burma gossip over a huge white cheroot much in the same way as American girls share a box of chocolates.

with heavy and ornamental metal trimmings, Mr. Demuth visualized as the ideal pipe a plain, unadorned briar with graceful lines of the simplest possible construction.

In those days it was considered bad form to smoke a pipe on the street or in any public gathering. Mr. Demuth foresaw that with the elimination of this prejudice against smoking a pipe in public, there would develop a demand for a

While this change was taking place, the briar pipe in the Demuth factory underwent an evolution and in the WDC Milano, which has been on the market for the past eight years, the Demuth organization produced a pipe such as William Demuth originally conceived. However, the ideal of perfection was so indelibly engraved on the minds of the master craftsmen at Richmond Hill that they would not admit to themselves that they had yet produced absolutely he est. To less exacting standa s, WDC Milano appears to be the sma pipe craft. But for the past fe ye a few of the most skillful artisa ur the capable guidance of the pres t g eration of the Demuth family c tin their untiring search for the tin finest—and the result is a pipe mi by the name of the idealist who c ce it 62 years ago—"Demuth Bruy é" finest.

The bowl of the new "Demu Br ére" is made from age-mello i thoroughly seasoned genuine Ita briar. It is subjected to the clos , m careful examination, and if foun o c tain the slightest, minutest kind f is discarded. Another and an er picked until a worthy piece is fou . Legal Lore

Latest New Law on the Right of Jobbers' Association to Interfere with Co-operative Buying

There is some new law on the right of wholesalers' association to interfere with the getting of goods by retailers' co-operative buying organizations and by the retailers. In accord with my effort to keep the readers of these articles currently informed upon such matters, I note and discuss it here.

This was the case brought by the Federal Trade Commission against the Southern Hardware Jobbers' Association for unfair competition. The members of this organization did 90 per cent. of all the Southern hardware business, no straight retailer could join and no retailers' co-operative buying exchange. A combined jobber and retailer could join, however, if his wholesale sales were as much as 75 per cent. of his total. The fee, however, had to be not less than $5000 yearly and the business must have at least $75,000 capital.

An Organized Boycott

The members of this association didn't like in manufacturers selling retailers, retailers' co-operative buying organizations, and they set up an organized boycott against any manufacturer who did it. As the Federal Trade Commission put it in the original complaint:

"It is the policy of members of the jobbers' association to refuse to buy from manufacturers who sell to customers who do not conform to the distribution policy approved by the jobbers' association" (that is, manufacturer-to-jobber-to-retailer-to-consumer), and that "the jobbers' association furnished to the manufacturers' association and its members lists of so-called regular jobbers and wholesalers in the territory mentioned, and notified the that named jobbers or wholesalers in that territory, including the Co-operative Association and the American Purchasing Co. (the last two were retailers' co-operative buying organizations.—E. J.) did not conform to the policy approved by the jobbers' association. By such means manufacturers were warned that the jobbers' association not to trade or deal with objectionable wholesalers or jobbers on the same terms accorded to so-called regular jobbers or wholesalers on pain of losing the trade or patronage of members of the jobbers' association."

The Commission's Finding

The Federal Trade Commission found this to be unwarranted interference with business and convicted the Southern Hardware Jobbers' Association of unfair competition. The association appealed to the United States Circuit Court of Appeals, which has just handed down its decision affirming the Commission, somewhat which appeal courts are not given to doing for some reason. I have a copy of the decision before me and present the following extracts from it:

"A result of a hardware manufacturer conforming to the policy approved by the jobbers' association is that one who is only a retailer cannot buy hardware directly or indirectly, or in co-operation with other such retailers, from such manufacturer on the same terms as are accorded to retailers who are members of the jobbers' association, though such retailer buys in what, as between the manufacturers and jobbers or wholesalers, are recognized as wholesale quantities. A consequence of the success of the policy approved by the jobbers' association is to impair the ability of jobbers or wholesalers who share with dealers who are exclusively retailers, to whom they sell, the profits realized on such sales, to compete with jobbers or wholesalers who retain the profits realized on sales made by them to such retailers, as jobbers or wholesalers so sharing their profits with buyers who sell only at retail, cannot buy hardware from the manufacturer at jobbers' prices and terms.

"The circumstances attending the furnishing to hardware manufacturers of lists of members of the jobbers' association and the giving of notice to such manufacturers that named dealers were irregular and not entitled to be treated as legitimate wholesalers, were such that it could properly be inferred that those acts were intended to have, and had, the effect of warnings to the manufacturers against selling on usual wholesale terms to dealers who were not members of the jobbers' association or who were so charged with non-compliance with the policy of that association.

"There was evidence tending to prove that the petitioners combined and co-operated to keep manufacturers willing to do so from selling their products at wholesale prices and terms to the Co-operative Association and the American Purchasing Co., and to obstruct and prevent those concerns from competing as jobbers or wholesalers in territory sought to be approved by the jobbers' association and dealers conforming to the method of doing business which was approved by that association. That evidence warranted the conclusion that what the petitioners did to thwart the success of the Co-operative Association and the American Purchasing Co. went beyond each of the petitioners asserting and seeking to enforce its or his individual view as to business policies or methods, and amounted to co-operation between them in furtherance of a common purpose to prevent hardware manufacturers selling without price discrimination to exclusively retail dealers or organizations buying for such retailers on terms which effect a saving to retailers of all or part of the profit which regular wholesalers or jobbers retain, with the result of requiring such retailers to get hardware only through the self-styled legitimate wholesalers or jobbers.

"The success of the concerted action in which the petitioners participated meant the monopolizing of the wholesale hardware trade in an extensive territory by members of the jobbers' association and dealers conforming to the above-mentioned policy, and also meant the exclusion of hardware retailers in that territory from sources of supply available to wholesalers unless they combined wholesaling and retailing in that particular way which was approved by the jobbers' association. We are of the opinion that such concerted action involved restraint of interstate trade, and is a proper subject of a Federal Trade Commission order to cease and desist."

I have no doubt the Hardware Association will appeal to the United States Supreme Court, but in this case I believe the decision will be affirmed. It is one thing for a manufacturer on his own initiative and for his own reasons to refuse to sell co-operative buying organizations on the same terms as jobbers. The United States Court of Appeals upheld the Mennen Co. in the right to do that. But it is a very different thing for a number of jobbers to get together, order a manufacturer not to sell a co-operative buying organizations solely for the benefit of the jobber, and concertedly boycott him if he refuses to comply. The latter is, in my judgment, grossly illegal, and I predict that the Supreme Court will hold to that effect with the United States Circuit Court of Appeals.—*Copyright*, 1923, *by Elton J. Buckley.*

RACINE PAPER GOODS CO., Racine, Wis.

Sales on the Carolina Markets

DANVILLE, Va., Aug. 21.—Sales in South Carolina have been very heavy for the past week, having sold to date about 18,000,000 pounds on the loose leaf floors at an average of 22½ cents. The Co-ops have probably received from 3,000,000 to 4,000,000 pounds to date.

The crop is of fair quality, but more on the domestic side, although there is a fair quantity of the better grades showing up that will be suitable for export trade. These grades are practically at the same prices prevailing last year, but the common to medium tobaccos are higher than they have been for some time. Prices continue firm on all grades.

Eastern Carolina

The crop in Eastern California for the past two weeks has gone back considerably and indications are that we will have a larger amount of common tobaccos than was anticipated.

Recent heavy rains have caused most of the tobacco to take the second growth and the farmers are having considerable trouble in curing this tobacco bright.

Conservative estimates are now being made that Eastern California will sell from 50,000,000 to 75,000,000 pounds more tobacco than last year and the crop as a whole will be of fair quality.

Old Belt

The crop in the Old Belt has improved considerably and we now look for a crop of very fair quality and almost equal quantity to last year.

On account of unusual weather conditions—that is, very dry in the beginning with excessive rains during the past two weeks, the crop is much later than usual, and is expected to furnish a considerable amount of rough, heavy bodied tobacco. However, we expect the crop as a whole to show up fairly well and to furnish tobaccos of cigarette types suitable for both domestic and export trade. —DIBRELL BROTHERS.

South African Tobacco

(*Continued from page 66*)

of South African tobacco, 1,500,000 pounds of Rhodesian, and only 211,307 pounds of imported tobacco.

"In 1913 the total imports of raw tobacco into South Africa amounted to 1,033,910 pounds, of which 592,654 pounds came from the United States, 306,295 pounds from Portuguese East Africa, and 106,587 pounds from Turkey. In 1921 only 217,638 pounds of raw tobacco was imported, of which 91,161 pounds came from the United States, 36,688 pounds from Portuguese East Africa, 80,989 pounds from other British possessions in South Africa, and 1,751 pounds from Turkey. During this same year 2,378,603 pounds of Rhodesian tobacco were brought into the Union.

"The full amount of tobacco which can be consumed within South Africa is now being produced, and if the output increases oversea markets must be found. Although the production of Nyasaland tobacco is as yet relatively small, the 1922 exports amounting to 6,320,808 pounds, there is reason for some apprehension as to its competition with American cigarette tobaccos in the United Kingdom."—LAMM.

isconsin Tobacco Sales Continue To Be Active

ying of Northern Keeps Up in Rather Stiff Shape—Supply and Demand Holding Center of Attraction—Contract Books a Part of Every Buyer's Kit—Poolers Are Restive.

DGERTON, Wis., Sept. 2.—The buying he north keeps up in rather stiff shape. ere the ratio between old man supply . finicky miss demand is altogether asing to the grower of the independent eage. It is being diligently searched there by numerous buyers, and it is afe bet, that all the independent supply binders will be contracted for before balance of the northern crop will be ng up in the sheds.

he buyers from practically every large rator's staff are carrying contract ks in their pockets, and the weed is idly changing hands when a suitable id of it is found. Traditional caution other years has sometimes been abanied by this year's buyers. Many of m have run rather long chances on at the weather of the next few days l do to many of the dry weather crops, say nothing of risking the ravages of st.

Getting Second Growth

The northern fields, it is true, have rted along in fine shape since the rains recent date. Much of the tobacco, wever, was ripening while enduring the ught. Many times tobacco ripe, or ening, will start to grow again with ntiful rain, especially after a long, ere dry spell. Oftentimes, it will not n out to be the binders expected, after h an unusual process. Many crops alst ready to harvest have been more med than benefited by rain at that e.

The weather the past two weeks has n fine. The days have warmed up in e shape, with plenty of moisture. The hts are rather cool, and if continued, y have a tendency to thicken up some the thinnest fields of binders.

Bumper Crop Likely in Southern Section

n the south, the crop is rapidly evenir up, and is going to be a bumper one. ere has been no hail, no worms, nor sshoppers, nor any wind damage to e, and plenty of binders are assured everyone. Should the weather remain orable for two more weeks, the bigt crop in years of southern binders of lly fancy quality, will be harvested. ny crops will compare well with the st northern grown in the state this r.

Dodging Dockage

Buying in the south is steadily keepr up in its original volume. Several cy fields have been contracted for und Orfordville at prices ranging as h as 25 cents and 5 cents. This is olutely authentic. Around Rockdale, mbridge, and De Forest, in Dane coun a couple of fields have reached as h as 25 cents, it is reported. The k of the crops bought have been ice ones, and the prevailing prices ve been around twenty cents, with ne few crafty growers, afraid of conct clauses, getting fifteen and sixteen cents straight, thereby removing all possible causes of dockage at delivery time.

Looking for Minnesota Tobacco

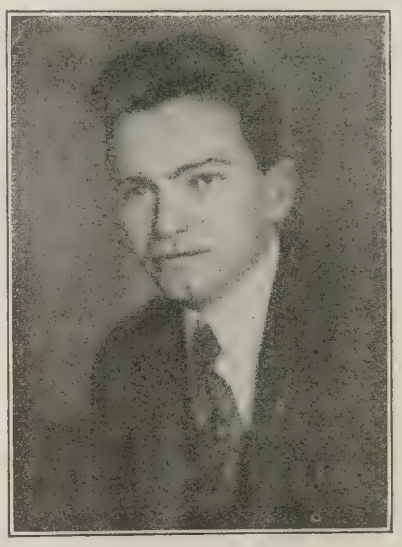
With prices well in the twenties in the south, and averaging about thirty in the north, many canny buyers have drifted over the river in Minnesota to scour the scattered fields there. The news was there ahead of them, however, and a flock of buyers are busily engaged relieving the growers there of the weed at equally stiff prices, at this writing.

All this is setting a pace distressingly fast for the ever heckled pool. With an easy eight thousand case packing of the '22 left, the independent farmers are getting prices ominously high. It is making the pooled farmers mill around like a bunch of restive steers. The astonishing amount of independent acreage is being everywhere pecked at with most attractive offers. They all have seen many a high market disappear overnight. The long, laborious process of pooled grading, and tedious selling reveals to them a dreary expanse of months and months of waiting for their market to furnish action. They all keenly suffer from acute impatience, and fear as they ponder the possibilities of what might happen to the market between now and next March. Also many fear a large carryover of the '23, and the possibility of their crops being one of them to be packed.

Serious Explosion May Occur

Also, there is much reason to believe that the pool directorate is facing a critical outlook largely caused by the copious supply of southern binders. If they are forced to grade a large percentage of their good tobacco as stemming to sell it, there will be a resultant explosion from their grower ranks that will be difficult to weather. If it is packed, the discontent will be slower in drawing to a head, but destructive when it does become volcanic. Certain it is, that the independent end of the crop is going to go a long ways toward furnishing most of the buyers their needs, and they know it. How much of a storm they are going to face is going to depend a great deal on the attitude of certain of the big buyers, and who they buy their tobacco from.

Clayton Hubbell, Roy Hopkins, R. B. McIntosh, Ed. Sweeney and W. Dickenson combined business and pleasure at the State Fair last week.



Selmar Neprud was in charge of a very attractive exhibit made by the pool at the fair. It was a fine showing, and was heavily patronized by the farmers from the tobacco growing districts of the state. —BADGER.

Wisconsin Pool's General Managership

The news that C. A. Hoen was not re-elected general manager of the Pool came like a surprise, and to many like a shock. While rumors were abroad that such a move was contemplated. It was not credited among the Pool members. No successor has been selected; in fact, there is no immediate rush to find a man to fill the vacancy. Mr. Hoen's integrity and honesty made him a trusted man among the rank and file of the members of the organization. Officially it is given out for public consumption that Mr. Hoen resigned, and that economy in the conduct of the Pool business prompted the move. Mr. Hoen has not signified what his future plans are.—*Edgerton (Wis.) Reporter.*

Vazquez Re-Appointed Porto Rican Agent

Announcement is made by the Government of Porto Rico Tobacco Guarantee Agency, 136 Water street, N. Y., that J. F. Vázquez has been re-appointed manager. Mr. Vázquez originally organ-

J. F. VASQUEZ
Manager of the Government of Porto Rico Tobacco Guarantee Agency

ized the Agency in 1921 and held the managership until 1922.

Mr. Vázquez is a practical tobacco man, having lived most of his life in the tobacco regions of Porto Rico.

Mr. Vázquez has seen about thirteen years' service with the Government of Porto Rico. He started as an Internal Revenue Agent, working his way up to the position of Chief of the Bureau of Internal Revenue.

In 1921 the Porto Rican Legislature passed a bill creating a New York Tobacco Agency and inaugurating a system of inspection of tobacco, guaranteeing the source thereof by means of Government stamps. These stamps have tendered to lessen the adulteration of Porto Rican tobacco, formerly very prevalent.

Leaf Exporters' Opportunity

The American Chamber of Commerce in France announces that a firm at Marseilles desires to get into touch with American leaf tobacco exporters interested in the East and West African markets. Further information can be obtained by communicating with F. 2592, American Chamber of Commerce in France, 32 Rue Taitbout, Paris.

Angier B. Duke Meets Death by Drowning

GREENWICH, Conn., Sept. 3.—Angier Buchanan Duke was drowned early this morning when the small boat in which he was embarking from the Indian Harbor Yacht Club pier for his yacht capsized. Mr. Duke was the son of Benjamin N. Duke, wealthy tobacco man. He was thirty-nine years old.

Mr. Duke was one of a party of six who arrived by automobile after an evening at Manursing Island, bound for his yacht, the *Althea*. They were met at the dock by a member of the crew in a rowboat. The three women and two men with him entered the boat, and Mr. Duke started to follow. In some way as he stepped down the boat was capsized. All were thrown into the water.

Was Knocked Unconscious

When the dripping group was hauled out upon the dock it was discovered the host was missing. Men dived into the water to search for him; others grappled with boat-hooks, but his body was not found until seven hours later. It is believed he was knocked unconscious when his head struck against the boat's gunwale.

* * *

Angier Buchanan Duke was born December 8, 1884, at Durham, N. C., the son of Benjamin and Sarah Angier Duke. His family has been widely identified with the development of tobacco in this country, his father having been for many years treasurer of the American Tobacco Co. Angier Duke was a nephew of James B. Duke, well known in this city and president of the British-American Tobacco Co. His paternal descent was Scotch-Irish, his maternal French.

Angier Duke was graduated in 1905 from Trinity College, Raleigh, N. C., which institution had been endowed by his grandfather, Washington Duke, and in 1914 by his immediate family for $300,000. He entered on his business career in Durham as treasurer of the Durham and Southern Railroad Company, of which he was still a director at the time of his death. In 1908 he came to New York, and from that time has been engaged in numerous large business enterprises in this city and throughout the South. His offices were at 511 Fifth avenue.

Among his directorships were those in the Durham Hotel Co. and the Durham Realty Corporation, of which he was also president; in the Erwin Cotton Mills Co. and the Fidelity Bank, both of Durham. At one time, prior to 1916, he was interested in the Standard Pure Food Stores and the Certified Farms Co., Inc., of which he was also a director. He was many times a millionaire. His clubs were the Racquet and Tennis, the Knollwood Country, the Sleepy Hollow Country and the Automobile Club of America.

Hollingsworth Gets Store in Tribune Building

Herbert McLean Purdy & Co. leased in the Tribune Building, 154 Nassau street, a store in the Nassau street frontage to William A. Hollingsworth, now operating a chain of cigar and tobacco stores, at an aggregate rental of $100,000. This will enable Mr. Hollingsworth to estab-

lish a cigar store in another location where traffic is unusually heavy. After the necessary alterations have been made, Mr. Hollingsworth will install a most completely equipped shop.

Congressman Cantrill of Kentucky Dies

LEXINGTON, KY., Sept. 2.—J. Campbell Cantrill, congressman from the Seventh Kentucky district, author of the Cantrill tobacco census law and democratic nominee for Governor in the 1923 election, died at a Louisville hospital this morning at 6.30 o'clock.

Mr. Cantrill was a tobacco grower on a large scale himself, owning half a dozen farms. He took part in every campaign to organize the tobacco growers and at one time was president of the Society of Equity in Kentucky.

The Cantrill law, which he piloted successfully through Congress, requires manufacturers and dealers to report quarterly the amount of leaf tobacco in their hands.

Mr. Cantrill had been in Congress for fourteen years and had been elected without opposition for another term, which would have expired March 4, 1925. He was nominated for Governor August 4 in a close contest with Congressman A. W. Barkley, of Paducah, winning by about 9,000 votes.

Mrs. Cantrill, who was Mrs. Ethel Gist Ripy before her marriage to the congressman in 1918, and a son, James E. Cantrill, of Washington, survive him.

"Kicking and Pawing"

CLARKSVILLE, Tenn., Sept. 1.—A successful campaign for new members of the Dark Tobacco Growers' Co-operative Association in Montgomery county is forecast on reports of delegates from the civil district contact locals to the meeting of the central county local at the courthouse here. Many of the local representatives said that a number of non-members in their districts had already signed. The locals are summing up the unpooled acreage in their districts, dividing the names of the farmers among the members, and already a personal contact canvass has begun in a number of the districts.

Two or more district local representatives complained of "kicking and pawing" on the inside of the association, which they declared is doing the organization more harm than all the outside criticism.

Laurin Edmondson, local assistant in the Field Service Department, urged the members to attend the meetings of the district locals, assuring them that they will find something of interest in the matter of facts and figures they want to know. He reported that fourteen district locals are now functioning and that he finds feeling is rapidly becoming favorable in all sections. He advocated a stronger membership, saying that it is imperative, in order that the organization may control the price of tobacco.

"Put up your hammers, love one another more and stick together," was the advice given the farmers by Judge John T. Cunningham and George Fort, leading supporters of the organization. They expressed approval of the officials of the organization and told the members that no better men can be found.

Burley Association Notes

LEXINGTON, Ky., Sept. 1.—The receipt of 393 contracts the past week increased the membership of the Burley Tobacco Growers' Co-operative Association to 89,557, according to a statement given out by Chief William Collins, of the field service division of the association. Most of these contracts are from the newly-opened territory in Missouri and east Tennessee.

President and General Manager James C. Stone returned today from Missouri, where he spoke at Weston to the growers of tobacco in Platte county and at Sedalia before the Missouri Farmers' Association. Mr. Stone said the Missouri growers were enthusiastic over the new plan of selling tobacco. Two of the largest growers in Platte county signed while he was at Weston and it is expected that the action of these men will bring in many of the outsiders who have been hesitating about joining the co-operative.

Albert T. Day, of Lexington, and J. D. Baxter, of Mercer county, who were among the Kentuckians leading in the sign-up campaign in Tennessee, will return to east Tennessee the coming week and remain until the sign-up campaign is concluded. In Washington county, in spite of a hard fight made by speculative interests and the East Tennessee Tobacco Growers' Association, which proposes to continue the old warehouse method of selling, considerable progress has been made by the co-operative, under the lead of Colonel Charles B. Rogan and Major J. W. Weeks.

President Stone spoke Saturday at Williamstown to a great crowd of growers. Director of Warehouses Ralph M. Barker, who addressed the Jefferson County Farm Bureau at Fern Creek Friday, spoke at Hardinsburg today to another large crowd.

Internal Revenue Taxes in 1922-3 and 1913-23

WASHINGTON, D. C., Sept. 4—The total collections of internal revenue taxes from all sources collected for the fiscal year ending June 30, 1923, was $2,621,745,227.57 as compared with $3,197,451,083.00 collected in the fiscal year ending June 30, 1922, according to the preliminary statement made public yesterday by the Commissioner of Internal Revenue for the fiscal year ending June 30, 1923. This is a decrease in tax collections for this year of $575,705,855.43.

Taxes collected on cigars, cigarettes and tobacco for the fiscal year ending June 30, 1923 totalled $308,010,533.82 according to the report as compared with $269,771,109.63 for the same period of last year. The detailed figures are as follows:

Title VII.—Tax on cigars, tobacco and manufactures thereof:

Sources of revenue.	1922	1923
Cigars	45,152,102.05	48,137,580.62
Cigarettes	150,245,992.81	182,715,735.93
Tobacco	66,341,838.88	68,857,707.29
Snuff	6,947,630.94	7,175,216.54
Cigarette papers and tubes	1,001,509.93	1,095,996.74
Miscellaneous collections relating to tobacco	82,035.02	28,296.70
Total	269,771,109.63	308,010,533.82

Further detailed tobacco tax figures are given in the report as follows:

Objects of taxation.	1922	1923	Increase (+) or decrease (—).
Tobacco:			
Cigars (large)	44,183,575.34	47,272,570.61	+3,088,995.27
Cigars (small)	968,526.71	865,010.01	—103,516.70
Cigarettes (large)	118,478.19	130,929.10	+12,450.91
Cigarettes (small)	150,127,514.62	182,584.806.83	+32,457,292.21
Snuff of all descriptions	6,947,630.94	7,175,216.54	+227,585.60
Tobacco, chewing and smoking	66,341,838.88	68,857,707.29	+2,515,868.41
Cigarette papers and tubes	1,001,509.93	1,095,996.74	+94,486.81
Manufacturers of cigars, cigarettes, and tobacco (Special taxes)	988,274.81	1,004,517.02	+16,242.21
Miscellaneous collections relating to tobacco	82,035.02	28,296.70	—53,738.32
	270,759,384.44	309,015,050.84	+38,255,666.40

Tax collections in the Philippine Islands and Porto Rico on tobacco products are given as follows:

Internal Revenue Tax on Products from Philippine Islands, Fiscal Years 1922 and 1923, by Objects of Taxation.

Articles taxed	1922	1923	Increase (+) or decrease (—).
Cigars (large)	$455,740.45	$953,075.32	+$497,334.87

H. S. McGiffin Resigns

H. S. McGiffin, for more than fourteen years manager of the Wisconsin leaf tobacco department of the American Cigar Co., has tendered his resignation to take effect October 1. Mr. McGiffin has been associated with the Harper Leaf Tobacco Co., of Tomah, Wis., for some time past, and his resignation is due to his desire to give more attention to that business. The Harper Leaf Tobacco Co. has been doing a constantly expanding business, numbering some of the best known cigar factories among its customers, and in view of Mr. McGiffin's undivided attention to the business will undoubtedly show greater expansion in the near future. —*Edgerton (Wis.) Reporter.*

St. Louis Trade Topics

Dealers in Good Humor

ST. LOUIS, Mo., Sept. 2.—The cigar and tobacco trade continues good. Every reputable brand of cigars and tobacco, is in good demand—as well as some not so choice—so retailers and wholesalers are in pretty good humor.

Local employes and traveling representatives are getting back from their vacations and are at their various "gathering places" discussing business. There is a general feeling of optimism prevailing among them. They predict a good trade this fall and winter.

Wearing His Laurels Modestly

Walter F. Riley, secretary of the Ch P. Stanley Cigar Co., is a golf enthusiast and is some player, for he won the golf championship of the Century Club recently. He had to be some player to do that. In honor of his victory, he gave a dinner on the roof garden of a leading hotel and the toastmaster of the occasion was Leo Hayman, manager of one of the company's local stores.

Arthur Holthaus, formerly with the Fuelscher Cigar Co., has identified himself with the selling end of the F. R. R. Mercantile Cigar Co.

Fred P. Baldwin, representing Gradiaz, Annis & Co., and the Mendelson Co., who has been exploiting the cigars of those two high grade manufacturers in southern Illinois, is back at his headquarters in St. Louis.

Report Good Business

Abe Levy, traveling for the Wm. Stickney Cigar Co., in southern Missouri, W. R. Kaps, of the Ruy Suazrez Co., and a number of others who have been covering their respective territories, have been in and report good business.

Recent visitors here have been W. McCarthy and A. J. Gebert of the McCarthy-Gebert Co., and George E. Lewis of the American Cigar Co., dropped in a few days ago, for a few days visit to the local customers.

Notable Window Displays

Some attractive window displays recently seen here, have been the La Palma by Wm. A. Stickney Cigar Co.; Perfecto Garcia by Moss & Lowenhaupt, and Flor de Melba by the Stickney-Hoelscher Cigar Co.

New Jobbing Firm Making Progress

KNOXVILLE, Tenn., Sept. 1.—As wholesale distributor of cigars, the A. S. Nichols Co., which recently bought out the Zimmerman-Gregory Cigar Co., 311 North Gay street, is rapidly becoming one of the leading firms of its kind in the city. The company has made rapid progress in the short space of time it has been in business here, and additional territory will be shortly opened. It now covers a large portion of east Tennessee and its salesmen have been busy booking orders for the popular brands handled by the company.

A. S. Nichols, head of the firm, was postmaster at Dandridge under the Wilson administration. He is well known in this section of east Tennessee. He took control of the local company on July 1 and has inaugurated many new and progressive policies, under which his firm has steadily expanded.

Advises Against Joining Burley Pool

KNOXVILLE, Tenn., Sept. 1.—The Kentucky Burley Tobacco Growers Co-operative Association has had recently a number of representatives in East Tennessee for the purpose of persuading the East Tennessee tobacco grower to dispose of the tobacco that he might raise to the Kentucky Association. We have been requested by so many to give our views on this subject that we believe it but fair to all concerned to state them publicly.

The business men of Knoxville about three and one-half years ago concluded that it would be to the best interest of East Tennessee to encourage the growth and proper culture of White Burley tobacco in about fifteen counties. The data and facts that we thought warranted the effort were gone into thoroughly with Dr. Morgan, president of the University of Tennessee and it was agreed to organize as an institution through which we could work, the East Tennessee Tobacco Association, and Dr. Morgan pledged to the association his hearty co-operation of the Tennessee Extension Division so long as it worked for the interest of the farmers, and he has kept his pledge.

The East Tennessee Tobacco Association has been and is solely supported by the public spirited men and business institutions of Knoxville. It has never, nor has anyone connected with it, received one dollar in support directly or indirectly in any tobacco business. There are over 80 of the best men in Knoxville including the presidents of practically all banks, who have and are contributing to this work. There has been in this three and one-half years $22,000 in money put into the work, all of which was contributed by the above parties, and a great deal of talent, brains and labor for which no charge has been made. This is in addition to the intelligent and dilligent work that has been done throughout this period by the representatives of the Division of Extension of the University of Tennessee. This work has extended from Bristol to Cleveland and it has been the cause of doubling in the past three years the number of tobacco growers in this territory. Hence at least half of the tobacco growers in this territory are unfamiliar with the culture, grading and marketing of tobacco. The purpose of the business men who are sponsoring the proposition, and the Division of Extension of the University of Tennessee, will be defeated unless the grower does receive the very best price possible.

We do not believe that it would be to the best interest of the tobacco growers of East Tennessee to assign their tobacco to the Kentucky Association. All tobacco districts are jealous of other tobacco districts. They feel as a district that other districts should not be opened up. This feeling has always been strong in the Kentucky Burley section. They have always resented people in other sections growing Burley tobacco. Kentucky grows from 60 to 80 per cent of the Burley tobacco in the United States, hence this association in Lexington, would always dominate the tobacco that has been assigned to it, and there is a possibility that the spirit of jealousy would be used in exercising the conditions of the contract. There is also the grave danger that we would suffer at Kentucky's hands because of their lack of information concerning the quality of our tobacco. Judge Kehoe, vice-president of the Association, frankly stated that we thought we grew better tobacco than Kentucky, but when East Tennessee tobacco was shipped to Lexington it took them two to three weeks to sell it at any price, and that the buyers were telling us it was better tobacco and paying us a bigger price in order to encourage us to grow it.

Now remember under the contract that the growers are requested to sign the grading of the tobacco is entirely up to the Association, and if the officers of the Association believe our tobacco is inferior to the Kentucky tobacco and if they believe and regard us as a menace, it would be a simple matter to stop anyone from growing tobacco who had signed the contract. They can grade any grower out in one season, and their grading is absolute. There is no appeal from it. The only thing that the grower can do is to quit growing tobacco. If they could disgust a few thousand growers in East Tennessee with growing tobacco at this stage, our industry here would be killed for a generation, whereas, on the other hand if we can carry on our work harmoniously and profitably to the grower, in eight or ten years we can be growing sixty to eighty million pounds of the very finest Burley tobacco.

The East Tennessee Burley has several distinct advantages over Kentucky Burley. Everybody knows that except the Kentuckians. We have never seen a Kentuckian that will acknowledge it and never expect to. We are 100 per cent in favor of any kind of co-operation in marketing that will get the farmer a better price for his produce. The Knoxville Fertilizer Co. has been a heavy contributor to the East Tennessee Tobacco Association. They cannot find a market for their product unless the farmer is prosperous. The farmer cannot be prosperous unless he gets a profit on his produce. The greater his profit the more prosperous he will become and the greater his purchasing power.

We believe that the system of marketing tobacco as well as all marketing systems with which we are familiar can be improved, and we are willing to work with and co-operate with the farmers in East Tennessee in working out any improvement that might be sane and applicable to the East Tennessee situation. If the tobacco growers of East Tennessee favor the identical contract that is being used by the Kentucky pool, then we say let us apply it to East Tennessee and organize an East Tennessee Association and protect our own identity and the identity of our tobacco. Let the growers of East Tennessee name the management.

We favor the Division of Extension of the University of Tennessee calling a meeting of the leading farmers who are interested in tobacco in East Tennessee for the purpose of determining just what the tobacco growers of East Tennessee desire in the way of an organization. We favor calling into that conference the best talent employed by the United States Government through the Division of Extension, and the best talent employed by the Bureau of Markets which affiliates with the Division of Extension. This would give the association an element of security that it would not have otherwise, and it would give the individual a spirit of confidence which is very essential to the success of such an institution.

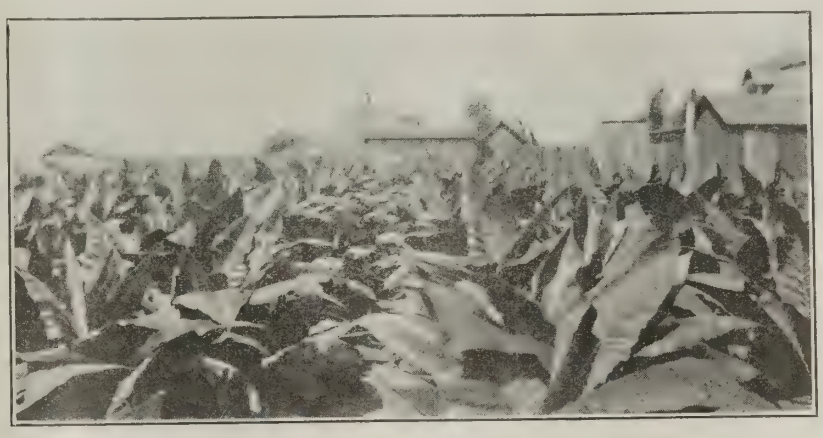
The one thing that we are very positive about, is that the Association should be a Tennessee institution, and we have no apologies to make for that position. We are sure that the members would have more rights and better protection in this way, and we are sure that the tobacco would not be subordinated in this way. An association cannot be co-operative unless there is a common interest, and that common interest must predominate. There is not a predominating common interest between the Kentucky Burley district and the East Tennessee Burley district.

The tobacco market in South Carolina and Eastern Georgia has opened up a little higher than it did a year ago, and it looks as if we would have a good market this winter. We are confident that no larger percentage of growers would go into the Kentucky association in view of the above fact, and we would deem it unfortunate to have a condition brought about in our section here by the fight that would result in mud slinging and hard feeling. Hence we favor getting together immediately after this crop is housed (as soon as the farmers have time), and deciding on some definite program for East Tennessee tobacco growers, and everybody get in line and carry it out.

We have always subordinated our work to the Division of Extension of the University of Tennessee and we are willing to follow their lead and work 100 per cent any plans that they will approve.

We are ready to do our part.—EAST TENNESSEE TOBACCO ASSOCIATION. By J. H. DEAN.

Burley Tobacco Growing in Yellowstone Valley



BILLINGS, Mont., Aug. 27.—Tobacco can be grown in the Yellowstone valley. The tobacco plant grows larger here and matures more quickly than it does in other leading tobacco-growing sections of the United States, and the product is equal, if not superior, in quality to that grown anywhere else.

These are the conclusions of J. W. Tucker, of Worden, in Yellowstone county, 25 miles east of Billings, a tobacco grower of 20 years' experience in Kentucky and Ohio, where he lived before coming to this State. He has experimented with tobacco for several years at Worden and this year has a field of one-twelfth of an acre, the plants of which are fully four feet high and which he estimates will yield at the rate of 1,200 to 1,500 pounds an acre, a tobacco which last year had a market value of $31 a

Another advantage in growing tobacco in this county which Mr. Tucker has found, according to his statement to the Billings *Gazette*, is the fact that so far in his experience, there have been no worms or other insect pests to bother it in the slightest.

A number of Mr. Tucker's neighbors on the Huntley irrigation project, have become interested in tobacco growing, and what may easily become a potential industry for this section of the country is this year being given a trial on a half a dozen or more irrigated farms in that section of the Yellowstone valley.

Mr. Tucker set out his tobacco plants the first of June and irrigated them once each week during June and July, but not in August. The leaves of the plants are very wide and with a very rich color, and the plants, Mr. Tucker says, will average about one-half pound of tobacco each. The land upon which he is growing it is heavy soil containing a little gumbo, but seems admirably adapted to the tobacco. He says he has never seen tobacco anywhere grow so rapidly and so large and develop and mature so quickly, and declares his belief that with proper care the crop can be made to yield a ton to the acre.

Field of white burley tobacco one-twelfth of an acre in area grown by J. W. Tucker at Worden, Mont., 25 miles east of Billings, which it is estimated will yield at the rate of 1,200 pounds to the acre. The market price of white burley tobacco is $31 a hundred pounds

Florida Crops Bought Up

MADISON, Fla., Sept. 1.—All the various crops of tobacco grown in this county have been bought up by the packers and have been delivered in a very satisfactory manner.

Practically all the first primings, or better known as sand leaves, are now worked out over the tables, and each grade has been put back in bulks for the final sweat before going into the bales. This class of wrappers are usually sold early and used early, and this year is no exception; each of the large packers here, A. E. Fraleigh Tobacco Co. and Hardee Tobacco Co., will have their sand leaves ready during the month of September. Already these firms have many requests for samples as soon as they are in bales and ready to show.

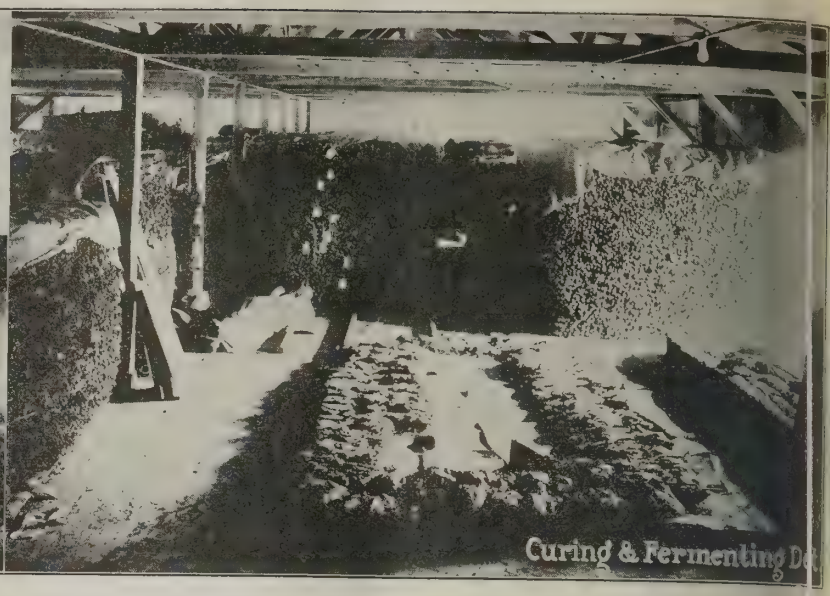
Friedman, Goldberg Tobacco Co., having sold their crop of shade tobacco, will not operate their packing house this year, but have leased the building to the Chamber of Commerce for a cotton storage warehouse, and already a few bales of cotton have been received for storage awaiting a more favorable market on which to sell, as the growers feel that the crop will be so very short the price will be better as soon as the buyers fully realize how much inroads the boll weevil has made on the growing crop.

Important Transaction

A deal of considerable magnitude was consummated here last week, by which Speight & Cantey, large packers of shade tobacco at Fowlstown, Ga., bought a half interest in what is known as the Smart Plantation of about four hundred and fifty acres of land, and they, together with A. Livingston, president of the Citizens' Bank of Madison, will grow at least twenty-five acres of shade tobacco next year. Madison county now boasts of producing shade tobacco the equal of any in the state, and a great many really prefer it to that grown in any other county of the state.

Last fall the May Tobacco Co. bought a large plantation in this county and grew, this year, thirty-three acres of shade tobacco, and following this purchase so early this season, Speight & Canty buying down here, building up an entirely new tobacco farm, causes many to wonder why these old tobacco concerns are leaving homes where they already have large interests and investing here, unless they see wonderful possibilities in what Madison county produces.

Frank W. Lloyd, of York, Pa., is here looking after the interests of the R. B. Lloyd Tobacco Co., who are large dealers in Florida tobacco. He is much pleased with what he has seen of the 1923 crops. Mr. Lloyd once lived down here in the midst of the tobacco-growing belt and he knows how and where to get the best wrappers, and he knows also that it is short-sighted business policy for any dealer or manufacturer to wait too late to secure the finest wrappers, and for that reason he is taking the Florida heat of August and September.



A. E. Fraleigh, of Fraleigh Tobacco Co., is home from an extended business and pleasure trip out west.

Sue 54 "Independent" Burley Members

MADISON, Ind., Sept. 1.—Considerable interest was aroused here today by the filing of suits for damages, costs and counsel fees by the Burley Tobacco Growers' Co-operative Association against 54 of its members in Jefferson county, whom it charges with violation of their signed contracts to deliver tobacco to the association.

Preparations have been made to sue probably 150 other growers at the coming fall terms of court in Switzerland county, where eight growers were sued earlier in the week, and in Jefferson county. The number of Indiana growers who violated their contract is said to be about 200 and the association's board of directors has authorized legal proceedings against all of them.

Martin Cigar Co. to Have New Headquarters

DAVENPORT, Ia., Sept. 1.—The Ferd Eddewig building, 411 Harrison street, Davenport, will soon be the headquarters of the Martin Cigar Co., the general offices, wholesale department and commissary to be located here, it was announced by George Martin, head of the cigar concern. Approximately $10,000 will be spent by the cigar firm in new equipment for the building. Mr. Martin announced that the new offices will be ready for occupancy about September 15.

For the past ten years the wholesale department and offices of the Martin Cigar Co. have been at 116 and 118 Main street. This is one of the buildings which will be wrecked to make way for the new home of the First National Bank. The Martin commissary is now located in the old Kaiserhof Hotel building, just west of the St. James Hotel. The commissary will also be moved into the new quarters.

The long term lease will give the cigar firm the first floor and basement of the Eddewig building. The building is 35 by 155 feet. The large basement will be used by the cigar concern for storing its cigars, candies and surplus stocks and is especially adapted for the needs of the concern. Large humidors for the storing of cigars and candies will be installed here. Specially constructed humidors will be installed. New bookkeeping machines will also be purchased for the offices.

The offices and wholesale department will be located in the front part of the building, while the commissary will be located in the rear. It is planned to install all modern equipment in the commissary and make it one of the best of its kind in this section of the country. Five large signs will also be placed on the front and side of the building.

Jacob S. Semon

PHILADELPHIA, Aug. 25.—Jacob S. Semon, veteran tobacco merchant, who died at his home, 2327 North Thirteenth street, Tuesday evening, from a heart attack, was buried yesterday. Funeral services were held at Mikve Israel Beth El Emeth.

Mr. Semon was 85 years old and had been a resident of Philadelphia since 1865. He was born in Richmond, Va., and during the Civil War, served as a private messenger for "Jeff" Davis. Mr. Semon was a well-known figure in the city and his place of business was a rendezvous for many prominent men. His first store was opened in the Merchants' Hotel. He later moved to 1021 Chestnut street, where he stayed until his retirement 20 years ago.

Domestic Exports of Leaf Tobacco, Cigarettes and Smoking Tobacco During June, 1923

WASHINGTON, D. C. Aug. 25.—The following tables show the domestic exports of leaf tobacco, cigarettes and smoking tobacco during June, 1923, from the United States, by countries. The figures are subject to revision. They are as follows:

The Cigarette Age

Our grandfathers smoked pipes and cigars—or, as they used to be called three-quarters of a century ago, "seegars." As late as the 1790s the cigarette was under the ban in this country, as it was believed to be smoked principally by (1) women of the underworld; (2) loafers in poolrooms, etc.; (3) boys, who thereby stunted their growth and weakened their moral fibers. With the present century the cigarette began to come into its own, and when it became the universal soldiers' smoke in the World War, the seal of respectability was placed upon it. In this country, it was recently announced, we are now smoking cigarettes at the rate of about seventy billions a year, which is about two a day for every man, woman and child. Of course, some of us smoke more than two a day. As there has been no great dropping off in the consumption of cigars and pipe tobacco, this vast consumption of cigarettes must indicate a large increase in the number of smokers. Perhaps the women have something to do with it.

Social Habits

The smoking habits of a nation tell a good deal about its social habits. Both the pipe and the cigar are contemplative, with the difference that the pipe goes well with the contemplation of labor, whereas the cigar demands relaxation. Both pipe and cigar demand for their proper enjoyment solid and undisturbed periods of time. The cigarette, on the other hand, is the small change of smoking and consumes the small change of time. Its popularity may mean that we are breaking up our days into smaller and smaller fractions. Instead of smoking a cigar and settling down for a good talk, we light a cigarette, puff it for five minutes and rush off to keep an engagement.

The confirmed cigarette smoker is nervous. But whether we smoke because we are nervous or are nervous because we smoke, is uncertain. The doctors and sociologists may wrangle over that.—*New York Herald.*

Why is it that during the past two years one out of every six cigars made in this country has been wrapped either with Sumatra or Java purchased from us?

Eick On Job Up-State, But Business Ain't Workin'

L' Jack Horner Likes Fruct Cake, Too!—Started 'Way Back in '71—There's a Million-Dollar-Cigar-Man Somewhere!—Back to Work, and Likes It!—From Piccadilly Circus, Ole Deah!—Moving Albany's Art Center!

EW YORK STATE CAPITOL DISTRICT,
Nine o'Clock, 1923.

An' yuh also told me business should better this week!" complained Sam A, dusting off the nine o'clock cigar cials in the retail department o' Stubb Ash, Inc., tobacconists to the Fall de. "Only last week, y'unnerstan, yuh ntioned how things was pickin' up, e' wheres up north!"

Well, wasn't I right?" demanded Jim Sbb, sorting over the resago box for a l Habana Vuelta before joining the n in the Hot Chair Club. "Conditions nerally are much better, especially with resort people, who've had a bang-up on!"

Yeh, that's just it," sighed Sam Ash, ranging the eight-cent goods so they uldn't be entirely eclipsed by the high-de nickel selections on top o' the coun- "Bang-up, yuh say, an' it's now lut time, unnerstan me, for most of e to bust-up!"

Looks Like Fruct Cake, Hey?

Oh, well, my business has not been oad," affirmed J. L. Lewis, entering the ms of the Committee on Mixtures r a long trip through the State for United States Tobacco Co. "Why, Dill's Best alone I believe I've sold re this trip than ever before.

This is particularly true of the twen-ive-cent-pouch-and-foiled size. Also he introductory five-cent packets, con-ing a specimen of Dill's, sufficient for alf-dozen smokes, with a packet o' e cleaners.

And the half-pound Dill's, packed in round fruit-cake tins, is selling well, So I understand the company is sidering the advisability of changing pound packing from the old style care yellow tin to a similar round ister.

Central Union, of course, needs no oduction in this vicinity, as it is al-dy a fair competitor of the other cut gs. But this quarter size of Oster-s Dollar Mixture I am featuring all r the State, and the response has been ellent."

Fifty-Two Years On the M'k't!

I can say the same with my new line," arked Tom Connor, coming into the king space of the Committee on Good ds through the wholesale door. ne everywhere! Yes, I have accom-hed quite an excellent business for E. H. Gato cigar line.

People know our slogan, 'Since 1871' they've come to rely on our mer-ndise. So, with fifty-two years of suc-sful cigar manufacturing behind me, I really have to do is say, 'How ny?'"

Where's That Million Dollar Cigar Man?

Nice to have a trade like that," agreed A. Schufeldt, running into the Com-tee on Filler, just as it was about to ourn, sine die, with a vote o' thanks hat Million-Dollar-Cigar-Salesman o' ns Falls. "And that's what we're try-n to do with La Palinas for Mr. Kil-h.

Here in Albany, the demand for our a-wrapped cigar is holding its own ily. Throughout the balance of the itol District we are also doing very l in our distribution of the cigars ile by the Congress Cigar Co. And I eve the fall trade will be very good ed."

Back to Work, Says Goodrich!

I hope so," fervently seconded Earl drich, pitching his Dearstyne Broth-Tobacco Co. kit to the Committee on rovement. "For here I am back to k after a nice vacation! Looking for ar business. Got any?

Next week, Schenectady! Something Tell you all about it bye and bye. Anwhile, Blackstones, Totems, Endi-cotts, Marshall Fields, Natural Blooms—how are you fixed? Cigars ought to sell like cigarettes when they're properly advertised with the new national slogan, 'After All, Nothing Satisfies Like a Good Cigar!'"

Ah, Ole Deah, There You Are!

"Except a cigarette or pipe," suggested Sir A. W. Dixon, Bart., he of A. Falk Tobacco Co., as he strolled into the Hot Chair Club. "I noticed the July figures on cigarettes were very nearly six billions! Merely a monthly increase of six hundred millions, that's all!

"Quite a large portion of that was on Herbert Tareyton brand. Also some for Johnnie Walkers! Two wonderful cigarettes! And have you seen our new life-sized Tareyton cut-out, spatted and monocled, swagger stick and silk topper, correctly attired for your show window?"

Greenwich Village to Move?

"Show windows are the thing," admitted Capt. P. V. Doyle, dean o' the Greenwich Village artists o' the Liggett & Myers Tobacco Co., as he wandered into the Committee on Paint. "Fixed up goodness knows how many displays during the recent newspaper campaign on Chesterfields in co-operation with the retail trade.

"But now we're looking for a larger and better art-room. Got to have more space to sling the brush. Both the cigarette and the tobacco departments are together in our present North Pearl street quarters, and we badly need more facilities."

Got Any Passes?

"So do we," nodded Jim Stubb, trying to yawn and stretch, and, at the same time, look busy. "Because the new Shubert Theater in Albany opens on Chapel street next week, and there's bound to be more cigar business in the vicinity of Maiden Lane on that account, even if it's only a eight o'clock mob lookin' for passes!"—THE SMOKER.

July Revenue Collections

WASHINGTON, D. C., Sept. 5.—The Bureau of Internal Revenue has announced that in July it collected $27,758,332.38 in taxes on tobacco products as compared with $26,080,543.16 collected in the same month of last year. This is an increase in the collection for this year of $1,677,789.22.

The Bureau collected $3,929,460.39 on large cigars, as compared with $3,767,623.29 in July of last year. The taxes collected on small cigars in July of this year were $54,930.35 as against $63,511.93 in July of last year.

Cigarette Taxes

Collections on large cigarettes in July of this year were $11,431.17, as compared with $12,583.91 in July of last year, and taxes collected on small cigarettes in July of this year were $17,519,297.45, as compared with $15,740,610.95 in July of last year.

Taxes collected on snuff of all descriptions in July of this year totaled $436,853.84 as against $514,555.81. The Bureau also collected taxes totaling $5,617,773.84 on smoking and chewing tobacco in July of this year, as compared with $5,866,384.45 in the same month of last year.

Special Tobacco Taxes

Taxes amounting to $129,887.55 were collected in July of this year on cigarette papers and tubes, as compared with $20,755.32 for the same month of last year. Special taxes collected by the Bureau on manufactures of cigars, cigarettes and tobacco in July of this year totaled $57,419.19 as against $94,162.33 in the same month of last year, and miscellaneous collections under repealed laws relating to tobacco in July of this year totaled $1,278.69 as against $355.17 collected in the same month of last year.—LAMM.

onplaint Against Pipe Importers

ASHINGTON, D. C., Sept. 5.—The itl States Tariff Commission on com- ir of the Reiss-Premier Pipe Co. has ed pipe importers under the unfair n- tition provisions of the act to ap- rat a hearing in this city on Sep- air 24. A. Schulte, United Cigar et al., are summoned by the com- n.

commission has issued the follow- ficial notice in this case:

on consideration of the complaint oath filed on the 4th day of Janu- 923, by John D. Burger as presi- f the Reiss-Premier Pipe Co., and supplement thereto filed on the lay of August, 1923, it is ordered:

That an investigation pursuant to n 316 of the Tariff Act of 1922 be, he same is hereby, instituted into leged unfair methods of competition nfair acts in the importation and f brierwood pipes at prices less than ost of production of said pipes in untry of their origin, in alleged vio- of said section.

That notice be, and the same is y, given to the parties alleged in omplaint to be the importers of the s aforesaid, namely, Dasco Import- o., A. Schulte, United Cigar Stores H. S. Lederer, A. Oppenheimer & Samuel Gordon, all of the city of York, State of New York, and all persons, firms, and corporations rned as owners, importers, con- es, agents, or otherwise in the al- unfair methods of competition and acts in the importation and sale id articles, that they, and each of will be afforded an opportunity to er said complaint on or before the day of September, 1923, and show , if any they have, why the provi- of section 316 of the Tariff Act 22 should not be applied in respect id alleged unfair methods of com- on and unfair acts in the importation ale of the articles complained of.

That public notice of said investi- n shall be given by publishing a of this order once a week for two ssive weeks, the latest of said publi- n to be made at least 20 days before 24th day of September, 1923, in sury Decisions, published by the De- ent of the Treasury, and in *Com- e Reports*, published by the Depart- of Commerce, copies of which said ications are obtainable from the Su- tendent of Documents of the Gov- ent Printing Office in Washington, .; also by posting a copy of this 30 days prior to said 24th day of ember, 1923, at the principal office e commission in the city of Wash- n, D. C., and at the office of the nission at the port of New York.

That notice of said investigation also be given by mailing, registered, age prepaid, a copy of this order cer- by the secretary of the commission its seal to each of the persons, , or corporations hereinbefore spe- ally named at their respective ad- es as given in said complaint."

Ventilation Essential

CLARKSVILLE, Tenn., Sept. 1.—Among many other things discussed in a s of interesting field meetings held his county last week by the Mont- ery County Farm Bureau in co- ation with the Dark Tobacco wers' Co-operative Association, in ection with the proper production handling of the tobacco crop, was question of proper ventilation of the s, with emphasis on the fact that of tobacco is often ruined after it hes the barn. Ridge pole ventilation s to be preferable to others, and it urged that these be so constructed to admit of regulation by being ed and closed as the conditions ld warrant.

Winter Cover Crops

nother interesting feature learned in nection with the meetings was the that practically all the tobacco age represented at the meetings will to some kind of winter cover crops, as rye, wheat, oats, barley, crimson er, etc. This is regarded as a healthy and one that will bring results if erly practiced over the entire county. A grand total of 147 farmers attended the meetings. Those taking part on the programs were J. E. McMurty, of the tobacco investigation department of the U. S. Department of Agriculture, and R. H. Milton, tobacco specialist from the division of extension, University of Tennessee; A. C. Morgan, of the local bureau of entomology and Vernon Brewer, of the Dark Tobacco Growers' Co-operative Association.

Georgia Tobacco Sales

ATLANTA, GA., Sept. 1.—A total of 8,000,000 pounds of tobacco has been sold on warehouse floors in Georgia this season, following a large increase of sales last year, according to a report made by the commissioner of agriculture. Reports from ten warehouses in the state last week, show sales amounting to 1,982,176 pounds. The average prices ranged from 19.21 cents per pound to 29.79. Tifton, Blackshear, Douglas, Vidalia, and Nashville were represented in the reports.

Figures on last year's sales were not accurate, it was stated, and for this reason comparative reports on this season's sales and those of 1922 were not given.

Oppose "Cut-Out"

VERSAILLES, KY., Sept. 1.—Vigorous opposition to cutting out the 1924 crop of tobacco was voiced in resolutions adopted by the members of the Burley Tobacco Growers' Co-Operative Association, who met here today to nominate candidates for delegate to the district convention of the association September 17, which will elect a director to succeed John B. Winn, incumbent.

Besides opposing the cut-out the resolutions endorsed the management of the Burley co-operative and expressed appreciation of what the association has done for the tobacco growers of Woodford county.

Cigarette Dealers in South Dakota Complain

PIERRE, S. Dak., Aug. 31.—Small dealers in cigarettes are complaining that the tax law of the last season has put them out of business so far as selling cigarettes is concerned, as their sales each year are not heavy enough to warrant them in paying the tax required for selling.

The license fee is the point on which they complain, as that is heavy enough to cause them to drop out of the selling of cigarettes, which they say was not a profitable trade for them but the stock was only carried to accommodate their customers.

Tobacco as Money Crop

NASHVILLE, Tenn., Sept. 1.—That tobacco is the best money-making crop for some sections of Davidson county is the contention of Oscar L. Farris, agricultural agent for Davidson county, and he expects to justify his contention at the Springfield tobacco show this winter.

The tobacco experiment is being carried out by fifty farmers in the Union Hill and Joelton communities this year. Each farmer is experimenting with one acre, on which he is using home-mixed fertilizer. In general, this fertilizer consists of 300 pounds of acid phosphate, 150 pounds of nitrate of soda and 50 pounds of potash. Judging by the appearance of the crop now, it supplies all that the soil needs, and Mr. Farris says that at present many of the plants bear leaves 46 by 24 inches. He expects the crop to average from 1,200 to 2,000 pounds an acre.

Interest in these farm demonstrations has brought about two community organizations that meet monthly for round table discussions. The fact that as many as fifty bona fide farmers are often present at these meetings indicates an unusual interest in the work. R. H. Milton, tobacco specialist, is assisting Mr. Farris in this particular part of his work.

On Annual Vacation

Herbert Holzman, of Strouse & Holzman, leaf merchants, 197 Water street, is enjoying a well-earned vacation at Winsted, Conn.

How we feel about JOHN RUSKIN

Best and Biggest

2 for 15¢
8 cents each

The dealers' success—and ours—depends upon permanent trade. We'd both go out of business if we depended upon the fellow who shops around from store to store, from cigar to cigar.

Our first consideration, therefore, has been to make the John Ruskin Cigar so good that it will make permanent customers for ourselves and our dealers.

The record for "repeats" that this cigar has made proves that we have moved in the right direction. It holds the trade of every smoker who is seeking the "Best and Biggest" cigar on the market, at its price.

"We hasten to thank you"

The American Tobacco Co.
INCORPORATED

"We have the latest sales reports of Blue Boar Cigarettes—very gratifying, indeed.

"Part is due to the wonderful cooperation of dealers in displaying Blue Boars—part to the cigarette itself—and now we've begun to advertise it.

"To show our appreciation we have authorized our Division Managers to give $150,000 in cash to dealers who display Blue Boars on counters.

"Thousands of dealers have already been visited—but if by chance you have not been presented with an award—just drop us a postcard saying that you have Blue Boars on display, and our local Division Manager will call on you—with cash in his hand to give you if they are displayed on your counter when he calls.

"Blue Boars are winning a leading position—increasing success. This means extra profit for you."

English Blend Cigarettes

To Grow Bright Tobacco in Florida and Georgia

QUINCY, Fla., Sept. 1.—At a meeting held in the court house here Wednesday a large representation of business men, bankers and farmers of Gadsden County were in attendance and delegations were present from the Georgia counties of Grady, Decatur and Seminole. Fully 175 men were present.

While the sentiment expressed was a hundred per cent in favor of the counties represented going in for the growing of bright tobacco, expression came principally from the business men and bankers present, most of the farmers neither expressing themselves for or against the proposition. However, says the *Gadsden County Times*, it is understood that the majority of the small farmers who do grow shade tobacco are desirous of going into the business next season.

The meeting was called to order at 2:25 by D. A. Shaw, a pioneer shade tobacco grower who was interested in several hundred acres of cigarette tobacco in Gadsden and adjoining counties this year. Y. L. Watson explained the purpose of the meeting and read a contract he had drafted providing for the formation of a $75,000 corporation to finance the construction of a warehouse and the employment of experienced demonstrators and other expenses incident to getting the industry started in this section. Before he called away soon afterward, Mayor W. B. Gregory was called to the chair to preside during the remainder of the meeting.

Mr. Corry Gives His Views

The first speaker called on was Wm. J. Corry, a tobacco man of 40 years' experience. While he said the type of tobacco under consideration was new to him except in a general way, he told of the impressions he received from attending the sales of it at Blackshear, Ga., recently, where he said buyers were ready to take every grade offered and that the lower grades brought relatively more than the higher ones. This, he said, was in striking contrast to conditions existing in the cigar wrapper center, where the poor grades are often hard to sell at any reasonable price.

Mr. Corry said that there is dire need in this section for a staple, dependable money crop that the smaller farmer can produce at a profit. He compared the cost of production of bright tobacco with shade leaf, saying that the cost to engage in the growing of the latter was prohibitive to many, while the former could be grown without large outlay and the demand is unlimited. He declared that this section has the soil, climate and farmers who know how to produce a good article. While he said the method of curing was different, it has many advantages that cigar leaf does not have. He touched on sun tobacco, saying that since this type had been discontinued there was no staple crop to which the planter formerly engaged in this industry could turn his hand.

Mr. Corry gave it as his opinion that an enormous industry could be built up in bright tobacco, but said it would be necessary to go into the business on a large scale, so that sufficient tobacco would be produced to entice buyers to the market. He said there should be no difficulty in producing the crop in the field, but that the curing in the barns would have to be superintended by experienced men. The Georgia counties that grew it this year, Mr. Corry said, did so under adverse weather conditions which would be unlikely to prevail in future years.

Says County Should Grow 2,000 Acres

D. A. Shaw was the next speaker. He told of his experience during the past season, saying that the crop must be produced on a large scale to prove profitable, suggesting that Gadsden should not grow less than 2,000 acres next season. The formation of a stock company to get the industry started was his idea. He quoted figures on the cost of production and selling and said to plant the number of acres suggested by him a corporation of the size named would have to be organized in order to be successful the first year and until the planters could become acquainted with the new crop.

Thos. Wight, president of the Farmers & Merchants Bank, of Cario, Ga., said he saw Grady County tobacco sell this year for 40 cents a pound and that his county got into the game late in the season and grew the crop under the most unfavorable weather conditions. He expressed himself as in favor of a corporation such as suggested, but said he would not advise farmers to make tobacco their exclusive money crop, suggesting that each farmer plant a small acreage, and by giving it his best attention produce a good article. Mr. Wight said he would not go into the proposition with the explicit understanding that the warehouse for the territory would be located in Quincy, saying he would favor the county planting the largest acreage being made the market center. He said he was in hearty accord with those interested here and would work with them.

Pessimistic Regarding Sun Tobacco

M. W. Munroe, president of the Quincy State Bank, started off by saying: "We people are not confronted with theory, but fact." He stressed the point that the sun tobacco business is gone and said he had no patience with the contracting for growing of this type of tobacco at 18 cents a pound, much of which brings only 14 cents when delivered, with the possibility of hail coming along and almost financially ruining growers. "The shade industry is almost as bad, and it is difficult for growers to make money out of it regardless of price received," said Mr. Munroe. He described it as a gamble from beginning to end, saying the small farmer is in a deplorable condition and that if the shade growers break even from year to year they are doing well. Mr. Munroe said he would like to see some crop grown in this county that would be as staple as cotton, with a ready market, whether it be high or low. He expressed the confidence that planters here could take care of cigarette tobacco all right in the field and said that if the cure is right tobacco of high grade could be produced. He was emphatic in his contention that Quincy must be the market, however, saying that unless this was agreed to by other counties "we will pack our little kit bag and travel by ourselves." His suggestion regarding the amount each planter should grow was that five-acre plots be put in, that such amount could be handled by the farmers and their families and then not be dependent upon negro labor.

The speaker concluded by saying he would be willing to take $5,000 worth of stock in the corporation on condition that the market be established in Quincy.

S. E. Key, president of the First National Bank of Quincy, stated that he was heartily in favor of the new industry and expressed a willingness to go into it with others, saying that something must be had for the small farmer to grow as a money crop. He said he would give every help possible to further the industry during the coming year.

Among the farmers who gave expression to their views were Joe Suber, M. H. Luten, John Martin and Walter Maxwell. All said they were favorably impressed with what they had seen and heard of the cigarette tobacco industry.

More Profitable Than Cigar Leaf

L. B. Ellinor, of Havana, Fla., told of attending a sale at Hahira, Ga., and exhibited samples of tobacco secured there with prices received for each. Mr. Ellinor said it beat anything that can be done with shade grown.

E. B. Shelfer, who attended sales of the type of tobacco under discussion in Georgia, said he believed local farmers could make much better tobacco than he saw at sales and stated he was much in favor of Gadsden County going into the business. He said it was the best prospect he had seen for our farmers, who he believed would need but little coaching to make a success.

J. W. Burroughs, of Cairo, Ga., who has had experience with bright tobacco in South Carolina, where he said the farmers had learned to grow it successfully, told of his experience in growing it in Grady County in 1916 which he

NEW YORK, THURSDAY, SEPTEMBER 6, 1923

BUSINESS AND DICE

The golden haze of olden days lingers yet and where it stays, in places, the atmosphere takes local color that makes things appear in quite a different light. Where traditions of pioneers endure, some old time practice is sure to be rather popular. Since the achievement of Volstead, Americans may not have the pleasure of matching coins on the bar. However, to juggle the bones for cigars is a privilege accorded almost anywhere on the Pacific Coast. In cigar stores, in San Francisco and other cities of the Far West, the clatter and racket of dice can be heard louder and more frequently than the tinkle of the cash register.

Before buying a smoke, a sporty customer may proceed to try his luck. The fickle ivories are coaxed, clashed and shaken. Such exercise is not noiseless. Nor is the amount of the eventual purchase ascertained at the first rattle out of the box. The galloping dominoes perform again. Operation is continued until negotiations terminate according to the placement of the spotted cubes. The dice decide what the merchant must give or what the patron shall pay.

Using dice to compute the cost of cigars to the consumer is a popular indoor sport. In numerous stores the volume of business is proportionate to the activity of dice boxes.

On the coast, in most places where cigars are retailed in significant quantities, it is easy to guess or see perhaps, how storekeepers regard dice throwing.

Even in a small store where four customers hardly could stand abreast in front of the show case at once, a choice part of the restricted space on the counter is padded, framed and reserved for dice playing.

In a larger store, three altars of chance may be seen on one counter. At each end and in the middle of the counter, facilities are provided for men addicted to dice. When three or four customers at once are "getting action" the click and patter of thrown bones may cause a cigar store to be more noisy than an old flivver traveling over an unpaved road.

Inattention may be alleged, or delays occur, in serving customers, if the sales force of a store is not greater, numerically, than the accommodations for dice players.

When dice games are in progress, the men behind the counter necessarily are watchers and recorders. Busy, observing and keeping score, clerks are interrupted in their work when a new customer comes in merely to buy a smoke.

If his attention is concentrated on a dice game, a salesman may be unaware of the arrival of another buyer. Or, to the would be purchaser, it may seem an intrusion to interfere to the extent of asking for any service while a game is going on.

The games are straight. The percentage to the dealer is not great. No customer is urged to play. Yet the supposition is that the dice assist constantly in obtaining trade. Many retailers believe that, without dice games, sales would diminish so it would be harder to remain in business.

Other merchants, although they still allow customers to utilize the dice, have doubts concerning such benefits as may accrue from the games.

At least some patrons of cigar stores are strongly opposed to the use of dice. They suggest that dice playing should be suppressed. On moral grounds, they object to anything related to gambling. They say that legitimate trade is prejudiced by association with games of uncertain legality. They urge that the retail cigar business should be purged of everything that is inferentially or potentially bad.

They implore tobacconists to avoid even the appearance of evil. They point to anti-tobacco agitation. They ask cigarists not to put a club in the hands of any active opponent. They declare it unwise to increase the number of enemies.

Since tobacco is a necessity, a solace and a practical comfort to millions of men in this country, honestly conducted tobacco business has little to fear, nothing to blush for and no reason to be ashamed.

But wisdom and prudence enjoin retail cigar dealers not to be identified with anything that may receive popular disapproval. By keeping their business entirely clean and respectable, they will maintain prestige and retain friends.

Those who argue against dice games in cigar stores are reminiscent concerning the "blindness and perversity" of liquor dealers in old wet days. Deaf to good advice from candid friends, saloon keepers either "lost out" or assisted to bring prohibition about, by continuing reprehensible practices.

If cigar business ever is hurt seriously, it is predicted that the injury will be inflicted by people who, by greed, were induced to disregard propriety.

In San Francisco, public antagonism to dice games is not very evident. Dice playing in cigar stores seems to be accepted as a matter of course. If there is unspoken opposition to dice throwing, possibly it is found in the thoughts of merchants who do not want the retail cigar business to be associated with any objectionable procedure. While San Francisco, proverbially, is liberal and tolerant, opinion is changeable and things permitted today may be forbidden tomorrow.

Considered strictly as a business proposition, the dice adjunct is regarded dubiously by various owners of cigar stores.

In Seattle, a city that isn't entirely Puritanical, many good friends and stead patrons of retail cigar dealers are convinced of the desirability of abolishing all dice games.

In general estimation, a business as a whole may be lower than the standing of the best men in it. Nor is an occupation, such as cigar selling, always judged according to its merits. Because of the meanness of a minority, an entire community may obtain a bad name.

A multitude can be affected unfavorably by the acts of a few unscrupulous persons. In Seattle, and in other places on the Pacific Coast, it may be said that an "undesirable citizen," here and there, has gained possession of a cigar store. As might be expected such "cigar stores" are "covers" for iniquity in various forms.

An alleged cigar store may be a screened entrance to disreputable back room. Some persistent sinner, masquerading as a respectable cigar merchant, may do evil until the actual character of his place becomes known to the police.

Seeing some of the things done by an ostensible competitor who appears to be succeeding financially, a struggling retailer may think it safe and profitable to help himself in the same way. But a fraud can not long continue. The bilk is soon discovered. Dishonesty leads t disgrace and sorrow. He who disregards th law often has cause to regret it.

Sharp practice doesn't cut much ice. Tru alertness is a better money getter. What pro perity the cheat has usually is of the mushroo variety. The diligent merchant who gives square deal to all is the one who builds up trac solidly.

In the retail cigar business on the Pacif Coast at present, rogues and tricksters are com paratively few. Yet they can make a lot o trouble. A rascal or two may pollute a busine locally.

Men attempted to pick winners before Bu Fisher did at the old Bay District track. T give and take chances may be a part of th philosophy of life. In the days of yore, a re blooded Westerner didn't shy away from an op portunity to make a wager. To toss the dice t see how much shall be paid for a cigar is a prac tice long tolerated on the Pacific Coast. T those who amuse themselves that way, the spor seems inoffensive. In support of his contention the dice thrower today can cite precedents tha antedate the earliest Roman history. Yet though the opposition mostly is latent, question concerning dice games in cigar stores have bee brought to the front in San Francisco and Seat tle. Individually and collectively, retail dealer in various cities are taking thought regarding the matter. What will the outcome be?

TOBACCO AND THE "ELEMENTALS"

Prof. Martin Hartmann of Leipsic has lai the foundation for a hot dispute with Si Arthur Conan Doyle by his statement befor the World Congress Against Alcohol i Copenhagen that tobacco using caused th death of Lord Carnarvon in Egypt las spring. Had Carnarvon been a non-smoker the Leipsic professor declared, he woul have survived the illness with which he wa stricken. These statements do violence to Si Arthur's scientific finding that the celebrate "curse of the Pharaohs" was what killed th discoverer of King Tutankhamen's tomb. In cidentally they do violence to the medica finding that Lord Carnarvon died of bloo poisoning, resulting from the bite of an insect but that, of course, is immaterial.

Leaving aside the vagaries and delusions o the modern schools of medicine, in which th enlightened, spiritismed, Christiansciened Freudianized, psychoanalized and intellectu ally buffaloed public takes no stock, the ques tion of importance, the timely, throbbing thrilling question is, did Lord Carnarvon smoke himself to his doom, or was he the vic tim of one of King Tut's "elementals," left behind to guard the tomb of the Pharaoh and visit the awful curse upon him who dese crated it?

Sir Arthur, on his recent visit to America, made out a very convincing case against (or should we say in favor of?) the "elemental." In fact, on the evidence adduced by him and the masterly manner in which he presented it before a jury of lecture attendants, it would seem to have been possible to have hanged or electrocuted the guilty "elemental," had it been possible to bring about his arrest and extradition. Our laws and our treaties with other nations are a bit weak in this regard. There is no provision for the capture, conviction and ultimate disposal of these menacing and murderous "elementals," and anyone who takes a run over to Egypt to dig up a Pharaoh or two does so at his own risk and the peril of his life. It interferes with the full enjoyment of one of the chief pleasures of tourist travel in the Near East, and is a great annoyance, to say the least.

The time and thought, the wealth of spiritualistic research, and the weight of scientific wisdom Sir Arthur brought to bear upon this question, while incidentally he was making

th discovery that dogs and beer and tobacco ar concomitants of the life in the hereafter (uite reconciling some doubters to the idea o a future state), this profundity, we might sy, that Sir Conan gave to the subject, stamped his verdict on the death of Lord Carnarvon as both sound and sensible. The contention of Prof. Hartmann that His Lordship's indulgence in tobacco caused his demise is, therefore, startling, revolutionary and susceptible to scientific challenge. We hope to see Sir Arthur marshal his spiritismic forces and attack the seemingly obvious heresies of Prof. Hartmann.

The Hartmann idea prevails if it results in the world-wide crusade against tobacco which the earnest uplifters at the Copenhagen congress are endeavoring to launch, it may deprive tens of millions of contented, although, perhaps, depraved and unregenerate souls of two of the greatest joys in life—an implicit belief in "elementals," and the comfort that comes from a good smoke.—*Springfield (Mass.) Union.*

THE BURLEY CUT-OUT

Discussion of a cut-out of the 1924 crop of burley tobacco has already begun, presenting a important problem before the people of Central Kentucky. Whatever occupations they are engaged in, directly or indirectly, the people of the Burley belt are affected to some extent by the prosperity of the tobacco farmer. The formation of the Burley Tobacco Co-operative Marketing Association has done much to drive the wolf from the door and to lighten away the suspicions and fears of the tobacco farmer.

Many times the warning has been heard that the greatest test which will be faced by the association is to be a "lean year." This does not mean a year of underproduction. It means a year in which the tobacco price, not the tobacco crop, is lean.

The burley association has served, as it was expected to serve, in furnishing a stimulation for tobacco planting. This was anticipated, and in the anticipation of this fact, a danger was sighted in advance by many who favored the formation of the pool.

A very definite statement was made at the meeting in Lexington recently of approximately 100 farmers under the auspices of the Fayette County Farmers' Union.

"It is better to get a good price for one crop of tobacco than a small price for two crops." This was view expressed by S. D. Goff.

Yet the question of a cut-out is one which has such serious aspects that it cannot be taken up without due deliberation, without the presence of all the facts which are necessary, and without a full and frank discussion of its phase.

The Fayette County Farmers' Union decided not to make an expression of its sentiment in regard to a cut-out at this time. At a meeting of 500 Scott county farmers in Georgetown, however, a vote was taken by acclamation on a motion endorsing a cut-out.

County Judge E. H. Doak, in addressing the Fayette county meeting, made a sensible suggestion in advising farmers to abide by the judgment of the officials of the association as they would be more familiar with the situation and would know whether it would be wise to eliminate the crop or to increase the acreage.

The officials of the burley tobacco association, as such, however, and the burley association as a corporation, will not be able to take any lead either for or against such a proposition, many believe. An examination of the federal law and an examination of the burley tobacco association contract with those who became members of the association, throw some light upon the subject.

The question has been raised as to whether officials of the association or the corporation on its own part, prohibited under the federal law from controlling or attempting to control production or reducing such, could make any suggestion for a tobacco cut-out without violating the federal law and be liable on the grounds of restraint of trade or upon some other grounds.

The officials of the burley tobacco association, however, can do one thing. They can furnish, without any recommendation, the facts obtained from governmental and other sources.

A census is now being taken in the burley district. It has been completed in approximately 20 counties, and when it is completed the burley association will be able to give facts as to the amount of tobacco that will be produced, if the forecast is correct.

Under the Cantrill act, the tobacco manufacturing companies are required to report the amount of tobacco they have on hand.

Therefore the amount of production expected can be judged. The amount of tobacco held by the manufacturers can be judged. The figures indicating the future demand can be obtained.

The California Fruit Growers' Association already had, at times, given out such information to be used by its members in governing their crops.

Concerning the probability of a cut-out, the *Stanford Interior-Journal,* which was one of the chief backers of the pool and which is always intelligent in its comments concerning the tobacco industry, has failed to join in the cut-out chorus, furnishing a new slogan. It is "Cut-in; don't cut out." The attitude of this paper is to the effect that the need is for all tobacco growers to join the association. It declares that a complete signing-up of the burley tobacco growers would automatically remove the difficulty faced, since it would avoid the chief evil of over-production, which is a dumping market.

There have been many arguments advanced on both sides, which have their merits. One thing, at least, can be said at this time. The burley association has certainly been responsible for delaying a cut-out of the burley crop until this year. Had the association not been formed a cut-out would have been necessary before this time.—*Lexington (Ky.) Herald.*

GEORGIA'S TOBACCO CROP

A dispatch to *The News* from Vidalia states that the tobacco season has about closed in that section, the latest sales averaging about 37½ cents a pound. The total amount marketed there was about 750,000 pounds.

The manager of the Vidalia tobacco warehouse, who seems to be well posted on the situation in general, gives it as his opinion that the total sales in Georgia this season amount to about 12,000,000 pounds.

This is a considerable amount of cash money, and it comes in at a time when there are few money crops to be marketed. Moreover, the tobacco-growing industry in Georgia is yet in its infancy. It has long been known that tobacco could be grown over a large part of the State, but whether it could be done profitably was a matter which could only be demonstrated by experience.

Little by little the acreage has been increased and yet the price continues to remain good. The growers themselves admit that it is a profitable crop.

Up to a certain point the increase in the production of almost any crop is an advantage to all concerned. Market facilities are an important consideration and quantity production improves those facilities. If we take this very item of tobacco we find that it was not until a comparatively large acreage had been planted in Georgia that the buyers found it worth their while to come to the fields and bid for it. We find that they do come in large numbers and the bidding is spirited.

Competitive bidding is not the only point of importance. The mere certainty of a market at a reasonable price is sufficient encouragement to the farmers to plant tobacco and the experience of a year like this will go a long way towards inducing them to increase their acreage.

There is a possibility of the overproduction of almost any commodity, to be sure, but an overproduction of tobacco so far as we are aware, is yet unknown.

In the ardent desire of the farmers of Georgia to get away from all-cotton as a money crop they have made many experiments, but none of them promise better returns than tobacco in those sections where it can be grown, and it is gratifying to know that such is the case.—*Macon (Ga.) News.*

BURBANK ON TOBACCO

Luther Burbank, the famous horticulturist, is out with a "counterblast to tobacco" that would tickle the very bones of old King James I.

He says he never saw a tobacco user who "did not regret that he had formed the habit" and never met a non-smoker who was "sorry he did not smoke."

That makes us mildly wonder how he found that out. Then he launches into the usual economic argument of all the opponents of all luxuries and indulgences founded upon what could have been done with the money people spent for some particular indulgence if they had foregone the indulgence and saved the money.

He says, for instance, that if the money the American people are wasting for tobacco were invested in homes every man and woman could have a home free from debt before reaching the age of fifty. Mr. Burbank fixes his estimate rather high when he places the average smoker's expenditure for tobacco at $1 a day, though some men, it must be acknowledged, spend more than that, but many a pipe-smoker "gets by" on twenty-five or thirty cents a week.

He estimates that on the average fixed by himself a smoker could save $10,000 and, presumably, accrued interest in thirty years by eschewing the weed instead of chewing or smoking it, or, if he only saved 30 cents a day, he would save over $3,000 by the time he reached the age of 50.

And so, if the head of the family should give up his tobacco and his whole family should give up their candy, soda water, theater and movie shows and the whole list of luxuries that might be listed as more or less expensive, for twenty or thirty years, and invest the savings they wouldn't have anything at the end of that time but money or real estate.

As to whether or not tobacco has a deleterious effect upon the human system, that is another question. At least it does not carry in its trail the long train of evil and suffering that characterizes the liquor traffic nor offer the same opportunity for wasteful extravagance.—*Springfield (O.) Register.*

MAKING OF CIGARETTES

Although some of the best cigarettes are still made by hand, the demand is so enormous that it would be impossible to supply the cheaper brands without the wonderful machines which perform every one of the necessary operations at lightning speed. From 600 to 800 cigarettes are made in a minute—in other words, each machine, if the cutting knives were out of operation, would produce in an hour a mammoth cigarette nearly two and a half miles long—*New York Tribune.*

They are raising tobacco in Ireland, which is much better than some of the things they have been engaged in raising there.—*Dayton (O.) News.*

ey West Key Notes

EY WEST, Fla., Sept. 1:—There is ery indication that the coming fall eason will be a busy one in the tobacco ousiness. Locally there has been an inrease in force in practically every cigar factory of size during the past week, and rom information gained at the office of many of the factories it is the intention of the management to seek additional workers during the weeks to come. Also it is noted the opening of several "back eyes," as they are known here.

Paul Albury, well known cigar manufacturer, who owns and operates El Prado Cigar factory, has announced himself as a candidate for the office of Mayor of Key West. Other candidates are J. G. Piodela, Lewis Otto and the present incumbent, F. H. Ladd.

The report of the collector of customs for this district for the month of May which has just been issued from the office of the collector at Tampa, shows that the amount of export business done by Key West during the month of May amounted to $3,024,857. This is far in excess of the exports for the month of May, 1922, at which time it amounted to $2,291,535. Pensacola ranks second, as it is shown that this city exported $97,859 of merchandise during the month of May this year. Other cities in Florida listed are Tampa, $345,627; Jacksonville, $642,750; Fernandina, $172,427 Miami, $82,418; Boca Grande, $22,000 Apalachicola, $21,700; St. Andrews, $21,715.

Usually Key West ranks second or third in imports, but during May the amount of business done through the Port of Key West amounted to $1,277,663 which is $582,502 more than during May, 1921. Tobacco imported from Cuba is listed as 387 pounds of unmanufactured for cigar wrappers, and valued at $1,115. Unstemmed leaf tobacco was imported to the amount of 186,922 pounds valued at $156,214. Cigar leaf tobacco stemmed there were 201,298 pounds with $224,829 of other tobacco there were 105,972 pounds valued at $33,621. Of cigarette paper, 280 pounds were brought from foreign countries through Florida ports. Of cigar bands and labels coming through the same ports there were 842 pounds valued at $1,585. Cigars and cheroots sent to the British West Indies amounted to 1,000, valued at $32. Of cigarettes there were 34,000 sent to ports in the British West Indies and these were valued at $178. Of plug tobacco 31 pounds were sent to Cuba, valued at $20. There were 466 pounds of smoking tobacco shipped to Cuba valued at $276.

To Open Branch Factory

Paddy Watkins of the firm of Watkins & Kemp, cigar manufacturers, of this city, has gone to Miami where he will open a branch of his company and introduce to the people of the Magic City the famous brands of this company. Besides being an A number one manufacturer, Mr. Watkins is a well known baseball player, having played on several teams both in this state and in Georgia.

A number of cigar makers who have been in Tampa for several months, returned to this city Friday. Those who returned this week predict the return of many more.

To Open New Store

KENOSHA, Wis., Aug. 31.—George Becker, of the Becker Cigar Co., announces that he has secured a lease for the corner room of the new Schwartz building being erected on the northeast corner of Wisconsin and Main streets. As soon as the building is completed a cigar and tobacco store will be opened there. The store will also serve as another news agency for the company.

The Becker company will continue to operate its store on the northwest corner of Wisconsin and Main streets in the Kimball block, the lease on that property not expiring until May, 1924.

Rocky Mount Average $21

ROCKY MOUNT, N. C., Sept. 1.—Total sales for the week, 250,000 pounds. Average price per 100 pounds, $21. Market opened Tuesday and sales have been light, due to the farmers being busy housing the crop, which is 2 to 3 weeks late.

WATKINS & HARVEY DANVILLE, VIRGINIA

To Cigar and Cigarro Manufacturers—

The only

SCRAP CUTTER

built for economical results and service

Made in two sizes.

WHAT IT DOES

Cuts damp tobacco. Cuts 2500-3500 lbs. per day. Cuts uniform. Is adjustable to different sizes. Consumes little space and power.

WHAT IT DOES NOT DO

Does not choke up.
Does not tear or drag the leaf.
Does not make over 1-10% dust.

LONG ISLAND CITY, N. Y.

San Francisco in "Throes" of Cigarmakers' Strik

Employees of Three Leading Factories Walk Out—Worker Demand 25 Per Cent Wage Increase—Small Country Fac tories Increase Activities—News Notes.

SAN FRANCISCO, Cal., Aug. 29.—The story of the cigar manufacturers of the West Coast is simply that of one blessed thing after another. And the last "thing" after another is a general strike of cigarmakers. From three of the leading factories last Thursday walked out 450 of the workers. Four hundred left the factory of the Petri Cigar Co., at the corner of Battery and Vallejo streets, where the Toscani and Van Camp cigars are made. Twenty left the factory of R. Schwartz & Co. at 556 Commercial street, and thirty more left the factory of Cimino, Cortina & Co. The walkout was due to the refusal of a demand for a 25 per cent wage increase. The Petri Cigar Co. managers say they will let their factory lay idle rather than grant the increase, for the women in their employ are now making from $2.50 to $6 per day. To Cimino, Cortina & Co. the strike comes as a surprise, for they were already paying a somewhat higher scale than the other factories. While it was both union and open shop employees who walked out, the strike is probably the result of union activities, for the active agent in fomenting the strike was Paul Lavatita, business agent of the union. And this seems the more probable, as the R. Schwartz Cigar Co. recently threw their union employees overboard, and there has been more or less feeling in consequence. Some other employees have walked out, but in most cases not sufficiently to close the shops.

Showing Renewed Activity

The Golden State Leaf House reports that the small factories of the interior seem to be recovering from the usual summer quiet, and to be picking up courage again, as small orders are coming in voluntarily from various directions. And Harold Horn, who has been up Sacramento way, has sent in several very lusty orders along with the others. Harold will steer his auto on up into British Columbia, and as word comes of things picking up through the northwest, it is probable he will enjoy his initial trip in every way.

Gratified with Manila Growth

Another person who must be enjoying his trip is David F. Morris, associated with C. A. Bond as tobacco agent for the Philippine Government, for the Manila cigar has been growing steadily into one of the staples of the Pacific Coas Indeed, there is scarcely a distributir house in San Francisco now that do not handle one or more brands of Mi nila cigars. Mr. Morris has just con from the northwest, where he found th Manilas steadily gaining favor. Th Manila, he explains, is coming into fav for two reasons: first, the cigar can l produced cheaply; and second, it is th policy of manufacturers and the Philij pine Government to build to quality ar brand excellence. He explains that th cheaper production of Manila cigars not so much due to cheaper labor as t the wonderfully cheap leaf productio Instead of being obliged to renew so with fertilizers, sometimes running int hundreds of dollars per year, the Cag yan River, like the Nile in Egypt, bring down a sheet of vegetable humis ever year and spreads it over the tobacc raising district in a belt from four t twenty-one miles wide; and the cultiva tor, without plowing, simply harrow over his ground and sows his seed. T insure quality, and sanitary purity, th government requires that every employe before entering a cigar factory sha take a medical examination to insur against any contagion. Inspectors vis the factories every week and insist o the utmost cleanliness and healthful fac tory conditions. No lunches are allowe to be eaten in the factory, and ever table must be cleaned up each night be fore closing. The government then in spects every box before shipping, an puts on its stamp, a small stamp fee be ing charged. And this stamp is a guar antee not only of apparent quality bu of keeping quality for sixty days. I case of defect appearing within that tim rebates are allowed to cover losses, an if the goods are unfit for use, they ar taken over by the government and th purchaser reimbursed. These precau tions, says Mr. Morris, have so reduce the defective shipments that there is ver little complaint from the Pacific Coas He explains that quite a considerabl amount of American capital has been in vested in the cigar business there, th Alhambra producers being the most con spicuous American firm; but there is als Spanish, English, Dutch and Chines capital invested, with a little native own ership. Up to the American occupation trade was largely conducted by the Chi nese, the natives being mostly agricul

ural; but since the occupation, the natives are engaging more in business and owning an increasing portion of the wealth of the company. They are, too, all learning English, the language being compulsory in the schools, and as their brightest students are being educated in the United States, they appreciate the advantages, and are feeling the economic ties that bind them to this country, the leading market for their products. Mr. Morris considers the native Filipino as very progressive and appreciative of the advantages of education; even among those tribes where the torrid climate causes them to wear little more than a smile.

Spreading Out

Sam Israel reports that his favorite, Garcia Vega is taking on additional distribution, and repeats are coming in nicely. He says it seems certain that the high-grade cigars and the clear Havanas are gaining favor in this market. He reports that the Pall Mall special, to retail 10 for 35, is now being placed on this market.

A Promising Outlook

From the way in which a certain pleasant and friendly-looking picture gazes at you from nearly all the tobacco stands, and from many other stands as well, it looks now as if one of our next supervisors was to be Adolph Judell, secretary-treasurer of H. L. Judell & Co. H. L. Judell himself is back from his recuperating vacation, somewhat better, but still not at his best.

Kenneth Bailey, formerly with I. Lewis & Co., is now working for Rosenthal Bros. on the R. B. Invincible in conjunction with the S. C. Bachman force.

M. Peters, sales manager, has just returned from Los Angeles. He found William H. Norden, factory representative for La Palina, doing splendid work in conjunction with the Southern Cigar Co., which now has branches also at San Diego and at Santa Barbara. Among their own lines, the Gato Key Westers are just now making quite a splurge.

The Connecticut Valley Tobacco Crop

It is estimated that if harvest conditions are favorable the tobacco crop of the Connecticut Valley will bring to the growers over $20,000,000.

Present crop conditions are reported to be the best of any within the last ten years. With prices higher even than in the war period, an increased acreage and greater yield per acre, it promises a most prosperous year for the growers despite high cost of labor and materials.

Much of the growing crop of independents has already been purchased at prices varying from 43 to 55 cents.

Great chances are taken in the tobacco industry and the growers are never free from worry until their product is marketed. Hail storms are the greatest dread and the cost of insuring the crop against this form of destruction comes high.

Since the formation of an association of growers in the valley, costs in insurance and marketing have been greatly reduced. The members have been able to get more credit from banks and keep prices more staple than when they were acting individually.

It is not yet known whether or not the tobacco men in the valley view with alarm the threat against their industry that comes from those reformers who are trying to have measures adopted that would combat the use of tobacco.

This subject was brought up before delegates of the Anti-Alcoholic Congress at Copenhagen.

That class of reformers who delight in attempts to regulate the personal habits of people are so much encouraged after putting over the dry amendment in this country that their zeal is now directed toward the banishment of Lady Nicotine. —*Holyoke (Mass.) Telegram.*

HOCKANUM, CONN.

D. F. Gosline, Boston, Mass. July 13th, 1923.

Dear Sir:

We installed one of your Ebulator Air Conditioning Machines in our warehouse the past season, and same has given very satisfactory results. We have tried two other systems of air conditioning machines and find yours far superior to either of them.

For your information we might state that we found quite a considerable saving in coal. The warm air which comes from this machine required our coils to be turned on only in extremely cold weather.

We are now cleaning the machine up and can see very little wear on the first season's use. This machine is of rugged build and we see no reason why it should not stand up indefinitely.

Very truly yours,

(Signed) BREWER BROS.

Havana Tobacco Market Showing More Activit

Both Exporters and Speculators Make Purchases—Quantity Remedios in First Hands Relatively Small—America Buyers May Yet Be Able to Secure Supplies.

HAVANA, Cuba., Aug. 31.—Our market has been a little livelier since my last report. Also in the country further sales were made to exporters as well as speculators. Taking into consideration the high cost of nearly all large packings, that is, as far as claimed by several packers, the recent purchases in the country, either farmer-packings or small private packings, compare very favorably with same, and if even speculators are buying in bales, they surely must be convinced that they can compete with any of the large packings. However, the quantity of Remedios tobacco in first hands in the country is relatively small, compared with the large percentage of tobacco sold already up to this time of the year. There seems to be an uncertainty in the country as to the purchases of the balance of Vegas and private packings. On one side the export houses, who already bought large quantities, would like to have also some Vegas to offer at lower prices, and on the other side the Havana Almacenistas, who did not want to go in at the high prices paid for bundles, are waiting for a chance to buy ready packed tobacco at lower prices than paid so far. Several of such private packings and farmer packings have arrived here, and the upper grades certainly show a good type of tobacco, being packed very clean.

Buyers' Opportunities

If the American buyers who used to come to Havana in the fall do not delay their trip too long, they will have a chance to still buy some first class tobacco, especially first and seconds. Also those who cannot afford to pay the prices for firsts and seconds or even thirds will have a chance to cover their demand by picking out some of the unassorted tobacco which gives a good result in stripping.

Some of the large cigarette factories of the interior of the Island continue buying Remedios as well as Vuelta Abajo low grades. Prices for these grades have hardly changed.

Some stripping plants are working already new tobacco, and within a few weeks from now all stripping places w be busy. Most of the tobacco, howev on account of the heavy quality this ye needs some storage still before it can stripped. The so-called trust and oth local factories have bought quite so wrappers and several good packings the V. A. Llano section were sold.

Buys Choice Packings

Sidney Rothschild has bought about thousand bales of V. A. Puntillas of t best and largest packings. This class former years used to be worth almo twice as much as Remedios 3rd Cap dura, while during the last years, due the great demand for Remedios fro North and South America and esp cially this year, prices for the latt grade are somewhat higher. Still t Vuelta Abajo tobacco this year has excellent aroma and first class quality f mixing purposes and Mr. Rothschild ce tainly has taken good care of them.

The packers in Vuelta Abajo have pr pared their tobacco very well, that letting the fermentation of the tobac take its natural course, as they kne that most of the tobacco will be stripp in this island, producing in this way good and sound stripped filler.

Also the firm of L. Pantin & Son busy looking for good Vuelta Abajo t bacco for the same purpose and u doubtedly also this firm with its lar number of clients will make large i vestments in upper and low grades this section.

Walter Sutter & Co. are still bus with the preparation of their new, lar warehouses, where they also shall op one of the largest stripping plants Havana.

Muñiz Hermanos, of Reina 20, a putting another large building in Carme corner of Lealtad, which will hold ov 15,000 bales. Unnecessary to mentio that this will be another beauty as t construction and accommodation. N doubt our old warehouses á la criolla española are disappearing, and by and b and perhaps pretty soon the warehous

Cleveland Business Shows Decided Improvement

Dealers Selling More Cigars and Cigarettes Than for Several Weeks Past—Optimism Based on Actual Conditions—Good Business Being Done at Various Fairs.

CLEVELAND, Ohio, Sept. 1.—Whether is because the summer vacation season almost over and people are coming in r have come in from the various resorts, leasure places and resting places they ave been to this summer or not, the fact emains that dealers here are selling lots iore cigars and cigarettes than they have or quite some weeks back. Things aven't been quite so good for some time ast as they are now. We were always iclined to be optimistic, but it isn't just ure, unadulterated optimism that leads s to speak as we do. Every fact stands ehind it. Affairs are really going over i fine shape. Nearly everybody we have ilked to is as satisfied, at least, as any ormal cigar dealer should be. Let us ive thanks, for surely we have someiing to give thanks for.

The various fairs, county, state, seconal, are meeting up with lots of enusiasm and success. The Ohio State air, naturally the largest and the most opular, is already swinging along in ven stride, and the cigar and cigarette oncessions are meeting with their share f the success, and then some. The uyahoga County Fair and the Lake ounty Fair, the former at Chagrin alls and the latter at Painesville, both nly a short distance from here, are makig real money for the lucky leaseholdrs.

Two from Smoky City

M. Lesser and M. Goldsmith, the well-known stogie men from Pittsburgh, ropped in on us this week. The Standrd Cigar Co.'s "Dry Slitz" stogie is heir forte, and they and the Baer-Wolf o., local distributors, see to it that no caler is without a big supply always on and.

Tom Branyon Drops In

Tommy Branyon, Corina cigar man, ropped in on us this past week. Tommy s some "sweet" hustler, and the dealer hat got away without giving Tom an rder was either deaf or blind.

A Visitor

A very prominent visitor of cigardom iade his appearance here this week in he person of Edward Steif, with the Julius Fernbach Co., of Chicago. Steif is the man behind the Cyrilla cigar which is meeting with a great deal of success through these parts.

In New York

Adolph D. Goodman, head of the large local jobbing concern bearing that name, is now in the midst of an extended visit to the Big City. A. D. has lots of real friends in New York and is kept busy meeting new people and renewing old acquaintances.

Cold Weather Helps

Cleveland dealers found things going a lot better during the coldest August in many years than they ever hoped would be the case. The cold weather seemed to invite the smoker a great deal more than did the hot temperature of some weeks ago. It can't be because it was so cold that they had to smoke to keep warm, but be as it may, the cooler weather acted as a decided impetus to business conditions in the cigar, cigarette and tobacco world.

Al Sticks Around

Al Spellman, he of the big jovial smile and jolly demeanor, favored us with his presence again this last week. Al found things in a delightful condition as regards Joan of Arcs and La Restas and managed to grease the slides quite considerably more toward the goal of fine distribution. The San Telmo people certainly have a real booster in Al, one who knows the "ropes," as they say in high-brow society.

Hi Hammer Calls

Hi Hammer, our old friend with Corral, Wodiska y Ca., called on the local trade this week. Hi always likes to make his headquarters in Cleveland, for every time he comes here he takes back with him lots of real big orders for his many good brands.

A Trade Caller

In the interests of Ben Bey cigars, W. Ellson and Clarke Cutler made their way into town last week. Ben Bey cigars have proven to be no flashes in the pan

Chicago Trade Notes

Bans "26" Dice Game

CHICAGO, Sept. 1.—Chief of Police Collins has set his seal of disapproval upon "26," the dice game in vogue at cigar stands in hotel lobbies and in practically every cigar store in the city, where customers "shake for the smokes." In a message sent to all commanding officers, the chief requests that the "26" game be stopped. After issuing this order the chief left town before proprietors of cigar stores and hotel managers began storming his office. Until this order is released many dealers here will find a big drop in receipts as the "26" dice game has always been a big trade getter.

The Chicago sales force of the General Cigar Co., Inc., held a very important conference at the office yesterday.

William Campbell, of Celestino Vega & Co., is meeting with much success in placing the new La Venga Corona that is packed in cans. The retail price is 15 cents.

Ruhstrat-Christian Co., 130 West Lake street, is getting big results with Cuesta-Rey cigars, which the house distributes locally. The business this year with the Cuesta-Rey factory will run well over $100,000.

La Estrella, mild Havana, is featured here by several dealers. The E. H. Gato Cigar Co., of Key West, makes La Estrella.

On Many Counters

Muriels in the Triumph size in boxes of 5 for 50 cents, are displayed on the tops of many counters. Faber, Coe & Gregg, Inc., are the distributors.

To Open Second Store

Sol M. Bernstein & Co:, who operates a very popular retail store at 300 West Van Buren street, are branching out. They have just leased the northeast corner of Van Buren and Franklin streets, for a term of years, and i open it October 1. Sol M. Bernstei Co. are well known Loop retailers. T have been in business here for m years.

The new Belmont size of Pan Arango cigars, to sell at 3 for 50 c has been placed with the trade.

Creditors' Committee Appointe

Warren Pease, Robert B. Palmer William Severin have been appoi trustees for the creditors in the case George Peterson, who runs two up date stores at 3803 Broadway and Morse avenue. Peterson owes $25,00 local merchants.

Sam Mosow of the Sioux Toba Co., Sioux City, Iowa, spent a few d here last week.

The H. G. Hughes Co., whole grocers of Omaha, have taken on distribution the S. P. V. Havana 2 15 cents smokes made by the Wm. Seidenberg Corp. at Tampa.

The P. Lorillard Co. salesmen are fering the dealers 10 per cent gratis each order for 1,000 Murads.

The Burges-Nash Co. of Omaha feature Pancho Arango cigars. J. Brill, representing the Wm. J. Seidberg Corp., closed this deal last week

Offer Special Discount

Melachrino & Co. offer 10 per c gratis on Melachrino cigarettes, if dealers display a new counter disp make-up on the show case. Many taking advantage of this liberal o and the displays are seen all over.

Ed Wodiska, as cheerful as ever, w his Dulce line, made by Gonzalez Mendes, Inc., of Tampa, is here booki orders for the holiday trade.

Julius Fernbach has returned from trip to Havana and Tampa. He repo a heavy increase on his Cyrilla cigar.

Don Pancho and Geo. W. Stocking, Arango & Arango, reported in Oma last week.

Frank M. Lopez, representing Gar & Vega, arrived and enjoyed a go business from his Chicago customers.

Tampa Tidings

Revenue Collections

TAMPA, Fla., Sept. 1.—Collections of t United States internal revenue de- rtment at Tampa last month were bet- t than for the same period a year ago, ough less than for last July, the fig- es being: August, 1923, $349,706.58; ly, 1923, $353,366.43; August, 1922, 34,330.63.

Stamp sales of the internal revenue partment last month covered the manu- ture of 40,351,450 cigars, nearly two illion cigars every working day. Value stamps and number of cigars repre- ted by classes, last month, were as llows:

	Stamps	Cigars
.....	$49,789.99	12,447,490
.....	15,552.90	2,592,150
.....	219,898.32	24,433,140
.....	55,882.62	4,656,880
.....	3,326.99	221,790

Receipts of the customs office at Tampa st month showed a slight decrease, 88,637.33, compared with $196,625.06 r last July and $192,423.99 for August year ago.

Clearing House Figures

In view of the fact that the cigar in- stry is such a predominating factor of e banking industry of Tampa, the fol- wing Clearing House statement reflects, a large extent, the healthy condition the cigar industry of Tampa.

Clearings of the Tampa banks for Au- st this year were more than two and half million dollars greater than for ugust last year, though less than for st July, on account of August and Sep- mber being somewhat duller months an the rest of the year in many lines Tampa. Figures given by the Tampa learing House Association are as fol- ws:

ugust, 1923	$10,450,436.03
uly, 1923	12,189,499.45
August, 1922	7,823,363.32

License for Demonstrating Purposes

The Miller, DuBrul & Peters Mfg. Co.'s Tampa Service Station has just been issued a license as a cigar factory under Factory No. 320, District of Florida. It is not the intention of this firm, however, to enter into the manufacture of cigars in competition with their many Tampa friends. However, by taking out a manufacturing license to comply with the Federal requirements, it will be possible to give actual demonstrations of the Durex Quality Production Bunch Machine and other M. D. & P. cigar machinery in the service station in the interest of manufacturers. The Miller, DuBrul & Peters Service Station has been in operation in Tampa since April under the management of Harry D. Smidley, and it occupies an important place in the daily business life of the Tampa cigar industry.

Petition in Bankruptcy

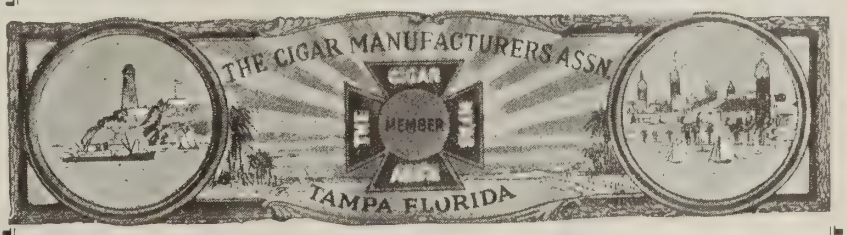
The Lady Diana Cigar Co., Max Smith, president, has filed a petition of bankruptcy through its attorneys, Jackson & Dupree. Total liabilities are listed at $13,184. Principal creditors are Max Smith for $7,000; Joe Farina, a stockholder, $2,500; M. J. Blum & Son, $500; Tampa Box Co., $1,300; Gonzalez & Mendez, $300.

A. L. Cuesta, Sr., will leave Spain, where he has spent the summer on his estate, about September 10 for his return to Tampa.

T. D. Fisher, of Weidman, Fisher Co., manufacturers of cigar boxes, has returned from his summer home in North Carolina.

Celestina Vega has returned from Havana.

Robert Pentland, Jr., of Jacksonville, a member of the auditing firm of Hall & Pentland, is filling a contract with several Tampa cigar factories.



CIGAR MANUFACTURERS ASSOCIATION OF TAMPA

Comprises All of the Leading and Representative Cigar Manufacturers in Tampa, Uniting in the Three-Fold Effort of:—

1st—Benefiting our members.

2nd—Maintaining the high standard of "Tampa" workmanship by seeing that our labor is justly treated.

3rd—Protecting the *dealer* and the *consumer* against unscrupulous methods of others by issuing to our Members the following "Identification" stamp:—

This stamp, on each box, is your guarantee that the goods are manufactured in Tampa—of "Tampa" Quality and Workmanship.

DEMAND IT

CAUTION

THE LA ROSA DE PARIS CIGARS are not genuine unless our name (Starlight Bros.) is printed on the labels attached to the inside of the box. Every box bears our name in order to protect smokers against unscrupulous sellers who are trying to supplant the well-known LA ROSA DE PARIS CIGARS by inferior goods.

onnecticut Crop Now in the "Pink of Condition"

he Weather Dispenser Has Been Very Liberal Recently in His Dispensation—Big Production Putting a Heavier Task on Mutual Marketing Association.

ARTFORD, Sept. 2.—Another week of orable conditions passed and the 1923 p is in the "pink of condition." The vesting went along not quite as fast ring the week on account of threaten- weather for a part of the time. Some owers laid off their help for a few days the tobacco was improving in the lot l was not ripe enough to harvest, and that extent the harvesting slacked up. owever, many of the growers finished th their harvesting and are now taking well-earned vacation after a very busy e growing and harvesting the 1923 mper crop.

The crop in some sections was hard get started early owing to cut worms, t dry weather and scarcity of plants, d did not get an early start. Some of e backward crops are still uncut, but e looking fine, and the showers recent- have been a great benefit. While about per cent of the acreage of the Valley now harvested, it will take another uple of weeks to make the final clean- as there are many acres yet not ready harvest and should not be taken in r a fortnight.

Favorable Conditions

The weather thus far has been fine for e curing and the early tobacco is now ell along with the curing process and is owing fine quality as to leaf, color and xture, such as has not been seen for any years. The entire crop of the Val- y is certainly a "bumper," not only in ze but is a clean crop. No "wildfire, ilico or rust," and is free from hail or orm damage. It has been cut under e most favorable weather conditions, d the indications are that there will ot be any pole sweat; the growers feel at they have gotten something this ar to show for their efforts. From esent outlook it would appear that the ercentage of low grades will be much ss than they have been in many years. The crop is also the heaviest one rown for many years, and it takes uscle to get it into the sheds and hung. The Connecticut Valley Tobacco rowers' Association now sees that it is much larger proposition to handle this eason's crop than that of last year, and e officers are making preparations to rovide warehouse room and will be eady to receive the tobacco much earlier an they did last year.

Good Demand for Broadleaf

There has been quite a demand for roadleaf, broken and fillers; these rades are moving out reasonably fast nd it is expected that they will be all old very shortly.

The work of sampling broadleaf wrap- ers and seconds will be started shortly nd it is expected that prices will be ade on the proposal of the directors to termi- nate the corporation. Secretary Am- brose Hardenberg sent out the notices. The American Sumatra Tobacco Co. now owns the common stock and has been acquiring preferred stock. It is said that the termination is merely a matter of formality. Fred B. Griffin retired from the company in March, 1922.

T. L. Warner, of Sunderland, Mass., who is vice-president of the Connecticut Valley Tobacco Growers' Association, is building a new warehouse with a capac- ity of 2,000 cases to handle tobacco grown by members in that section. Also in Hatfield, Mass., another 2,000-case ware- house is being built for association mem- bers' crops. Both warehouses are to be up to date in every respect with all mod- ern appliances.

Prices Seem Speculative

So far as prospective prices on 1923 tobacco are concerned, it is, of course, too early to even venture a guess, and prices on this crop have not been dis- cussed. All the tobacco in the associa- tion goes into the warehouses, and is packed and sweated, and the Havana seed will not be ready and out of the sweat before January or February, next, and the broadleaf will not be ready until about a year from now.

The packers have already contracted for practically all the 1923 independent tobacco at prices ranging from 40 to 50 cents per pound in the bundle, and on assorted broadleaf the prices have run up as high as 75 cents per pound. The buying of tobacco before it is cured is purely a speculation. If the crop hap- pens to come out well and the market does not slump, the packer will be safe; but only a few years ago packers lost heavily, buying at this season of the year, and before they could market the crop, came the slump in prices, and many growers who held their crops also lost, as they were offered peak prices and held until the market had dropped.

More Cheerful Outlook Around Danville

DANVILLE, Va., Sept. 5.—Continued improvement of the tobacco crop in the Old Belt is reported in advices received by tobacco men here. While a good deal of pessimism was expressed two months ago owing to the delay in getting the plants out the weather has been seasonable since then, and more especially of recent weeks, a good deal of lost ground has been made up. Some farmers go so far as to say that tobacco is only about a week or ten days later than usual. The days have been warm with occasional showers, while the nights have been cool and accompanied by heavy dew. Prospects appear bright for a favorable marketing season.

Auctions Making New Record

M. O. Nelson, local auctioneer who operates a warehouse in Whiteville, N. C., reports a new week's record for that market where he operates a warehouse during the early season. Two warehouses last week sold 1,107,840 pounds at a good average, sales beginning at nine o'clock and continuing until five o'clock each day. He reports that sixty per cent of the crop has been sold, three million pounds being already disposed of and two million pounds additional expected.

Impressed by Florida Tobacco

While here Mr. Nelson said that he had been impressed with the amount of tobacco which is being raised in Florida by farmers who have abandoned cotton planting on account of the damage done by the boll weevil. The tobacco experiment in Florida, he reports, has been attended with a good deal of success, and he sees a possible effect on the tobacco growers of this section if tobacco growing in Florida becomes more general. The type of tobacco grown there is similar to that grown in this section and one large lot which he sold at his warehouse and which was shipped to him from Campville, Fla., could have been readily mistaken for the type grown in this immediate section. The price paid for tobacco has pleased the Floridans, Mr. Nelson says, and the quick financial return which is made when the tobacco is sold has also influenced the farmers who do not have to go through the various processes that attends the marketing of cotton.—TETLEY.

Conditions at Oxford

OXFORD, N. C., Sept. 1.—The weather for the past two weeks has been most favorable to the growing crop; cutting and curing is going on rapidly.

The crop shows color and smoothness, but not as much body as we had expected. Later curings will doubtless show more body. Some of the later plantings show a tendency to oversize, especially in the northern section of t county where the topping is low.

With about 40 per cent of the c housed, we estimate an average crop this section, with not as much body for the past two years.—W. A. ADA Co.

Greenville Market Ge Slow Start

GREENVILLE, N. C., Sept. 1.—The f week's sales of tobacco on the Greenv floors was light. In round numb 650,000 pounds were sold at an aver of less than 22 cents. The grades h not been good, but prices on th grades have been high. Some good bacco has sold as high as 50 cents. I the buyers are not ready for good bacco this hot weather, and the farm can not expect much when he puts it the floors. Primings have constituted t great majority thus far. The bet grades have been mostly of the primi Really little, if any, good tobacco h been sold.

Sales have been light on account of t late crop. Curing is not over. Seve loads of flues were carried out this we for curing. It should all be in ne week. This is the latest crop in ma years. Much tobacco dried up on t stalk. Fodder harvesting has hinder grading and will for a week or tw Then cotton, which is opening rapidl will have to be picked, and so gradi will be slow for some time.

So far prices have been generally sati factory. Farmers kick little over pric And when the farmer fails to kick, th enough said. Sales are expected to l light for some time, and prices are e pected to get some better as the grad improve.

North Carolina Proud of He Tobacco Production

North Carolinians hear so many st tistics about the magnitude of industr in their state that they are unimpresse by repetition; yet there are some sets o figures that are too big to forget and ar so amazing they never grow too stale t print.

Tobacco facts and figures are like tha Not only does the state grow million of pounds of the finest of several varietie of the leaf, but the state manufacture fully one-third of all the tobacco manu factured in the United States. And one third of the tobacco taxes collected b the federal government, comes out o North Carolina.

The state is first in tobacco acreage first in tobacco crop values and first i manufacture of the weed.

Fourteen million dollars and more wa the sum paid last year for labor by to bacco factories in the state. More tha 20 millions are invested in factories and

value of their output in 1922 was over
million dollars. The products include
ars, cigarettes, pipe tobacco, chewing
snuff. Taxes paid the federal gov-
ment were about 110 millions for the
al year just ended; while for 1922
al year the sum was nearly 95 mil-
as. In 1922 the entire country paid
0,759,000 tobacco tax, about one-third
maybe a little more being paid by the
d North State.

One of the notable developments in the
lustry this year is the huge addition to
plant of the J. G. Flynt Tobacco Co.
Winston-Salem. It is 40 by 166 feet,
stories. In addition there is a ware-
use being built with 20,000 feet space
storage purposes. The company
kes smoking and chewing tobacco and
business has grown so rapidly more
m became imperative. The same story
told by other plants. Carolina-made
acco sells around the world.—*Greens-
ro (N. C.) News.*

o-ops Had "Big Time" and Are Criticized

GREENVILLE, N. C., Sept. 2.—The Co-
s "sure" did have a great time at
den, ten miles south of here last Fri-
y. There was speaking and eating
d—well those days may be gone for-
er—but there seems to have been some
"it" there, too. There was "speaking"
fore and after the "barbecue" between.
A. Brown, of Chadbourn, and H. S.
ard, of Washington, spoke before din-
r and some others after. Mr. Works
as "right there," and seemed to be a
al master of ceremonies. And there
re folks there, too. Folks from some-
here and other places, the crowd being
timated at between 4,000 and 5,000
ople.

Talked for an Hour

Mr. Ward spoke more than an hour
d a half. He went all the way from
enesis to Revelations and proved (?)
the intervening Books that co-opera-
n must co-operate. He made a good
eech even if he did have to appropriate
rt of Josiah Williams' John Smith, ten-
t, and weep over his plight. Mr. Ward
arted out by telling of his early career
Gates County, driving steers and plow-
g with mules, and consequently learn-
g how to "cuss." But the crowd would
ve taken his word for it without the
ample." This mule driving might have
so been an excuse for some of his quasi
arse language. It was a good speech,
ostly buncombe without any new rea-
ns for co-operating. He went to Vir-
nia, South Carolina and other places
d came back with great Co-op prog-
ss. And this reminded us that some
onths ago the spielers for co-operative
anut selling in Georgia had wonderful
les to tell of North Carolina and Vir-
nia peanut co-op greatness, when, in
ct, that association was in apparent ex-
emes. For, just a short few days be-
re that a Georgia crowd was being en-
rtained with the Peanutters' great Co-op business, the president expressed grave doubts as to it being able to function much longer, especially if it did not do better in advances than it had done, and that its future looked dark and threatening. There is little to be said about Mr. Ward's speech. It was like the politician's, full of promises, that promise. There was nothing in his speech to show what the farmer would get. That is the strange part about the Co-ops. After eighteen months of business, not a member outside those higher-ups know anything more of their affairs than they do of King Tut. The age of Ann is an open secret in comparison. How many members, what the condition, what the expenses, &c., &c., is as secure from public knowledge as is the fellow "who struck Billy Patterson." And farmers, needing money, their crops out of their sight and the future a mystery, open not their mouths, as it were.

The Open Market

The promise of as much or more than the open market gives is a delusion which should open their eyes. Just to illustrate how little they understand their own affairs, they may get the same price as the open market, and yet lose money. Take two men, landlord John Smith and tenant Bill Jones. They have 2,000 pounds of tobacco, and are equally interested. John takes his half to the Co-op house, gets fifteen cents per pound advanced, first payment, $150. Bill takes his to the open sales and nets twenty-five cents per pound, $250. In some distant time John may get six cents more. Getting close to Bill now. Well, for the sake of argument, say in the sweet bye and bye, he gets the four cents more, making twenty-five cents net, same as Bill got. What's the difference? Well, Bill has beaten his landlord by more than TWENTY-FIVE DOLLARS. How? Why, he saved all that warehouse jugglery. How do you make it? Well, John took his 1,000 pounds to the Co-ops. He got $150. His tobacco was set aside and then taken over to some house and handled again as the buyer would. The loss in this handling is enough to pay the warehouse charges. Ask any buyer the loss between the warehouse and the factory. Then it is re-handled, dried or something, and this loss is generally ten per cent in weight. Then John winds up with less than NINE HUNDRED POUNDS, but for argument, say 900 pounds. In the long run, and it is a *run* for his money if he ever gets it, at twenty-five cents per pound. Multiply 900 by 25 cents, $225. And Bill got his $250 a year or two ahead of him. Great business! But when those "little" salaries of thousands of dollars to any old employee, comes out, where is he at?

Without going into the payment of spies, lawyers to orate upon the "transcendant beauties" of swivel chair efficiency, and experts who know nearly as much about farming as the Sultan of Sulu, we rest the case right here for the present and ask the prayerful consideration of these facts and others kindred, and see where they will get off.

Take the case, farmers.

Work of the Fanatical Minorities

Old Demon Rum having been conquered and slain, Old Demon Tobacco is next on the list of evils to be attacked by the reformers. That excellent progress has already been made is proved by the success attending the efforts of our Ulster county reformers in preventing the sale of tobacco at the recent farm picnic. That a fanatical minority need only make noise enough, and persist in it long enough, in order to rule a wearied, thoughtless and cowardly majority has again been proved. Old Demon Rum is dead and Old Demon Tobacco is tottering. Unless some new object for their efforts is found, the reformers will soon be out of work, and the sane majority might be permitted to enjoy life in peace. Such a condition is unthinkable. Therefore, humbly but sincerely, we rush to the rescue with a suggestion.

In view of the old and familiar arguments advanced by the reformers in the past, it is evident that the new object should be one that these arguments will fit. It is, therefore, suggested that the next thing against which a prohibition campaign be started should be cheese. Cheese is an article of food that is made in varying ways to suit all tastes and that is enjoyed by a great majority of persons, and therefore prohibiting the manufacture and sale of cheese would interfere with the maximum number of people—a consummation devoutly wished for by all true reformers. Then, cheese is the product of decay, resembling in this respect alcohol. The appetite for cheese is an acquired one, that increases with gratification.

Many a person who began to eat mild, home-brewed pot cheese has been led by almost imperceptible steps along the downward path of stronger and stronger cheese until now nothing of less strength than the deadly limburger or the equally powerful and odoriferous home grown "ripe" pot cheese will satisfy his craving. Step by step, the insidious Demon Cheese has throttled the moral consciousness, weakened the resistance and depraved the appetite of its victim, who often gloats over the chains that bind him, boasts of his cheese-eating capacity and shamelessly offers cheese to others. Cheese is sold openly, eaten publicly and privately and daily adds to the number of its victims.

The defense that cheese, in moderation, is a healthful and nutritious food is no answer to the scientific fact that an exclusive diet of cheese is deadly—that cheese eaten in quantities of several pounds a day is fatal. Let it not be forgotten, no matter what moderate users may say, that eaten exclusively and persistently, cheese will kill. Therefore, cheese is poison and he who eats even the tiniest atom of it is, to just that extent, poisoned.—*Kingston (N. Y.) Freeman.*

Paducah Prospects

PADUCAH, Ky., Sept. 1.—If there have been any sales of hogshead tobacco made to independent dealers, they have not been reported. The association has made some sales, but I don't know what the quantity or quality. I don't think, though, that sales have amounted to much, although there has been considerable inquiry for common leaf and lugs. The past week has been the best weather we have had on the growing crop for some time. It has warmed up and we are having sunshiny days with heavy dews at night, which is very helpful to the maturing crop, and the improvement is marvelous. If farmers will only leave their crops in the field for a week or ten days longer, even where it is matured, they will have splendid tobacco. A great deal of it, however, is being cut too early, and will not make the quality or yield that it would make if left in the field longer.

The black fire scare has been overestimated, and there is very little danger from this source, and with a continuation of dry weather there is not so much danger, and with favorable weather for the next thirty days, I see no reason why we shouldn't have one of the best crops ever grown in this district and a heavy yield. It is now up to farmers to work and is out intelligently to get the best results.

In some sections quite a good deal of tobacco has been cut and housed. The greater part of it will make good and useful stock, but it would have been better to have left it in the field longer.

This has been a hard year on all crops, especially tobacco, but it is a crop that will stand more abuse than any other, and if we succeed in making a good crop after all of the unfavorable weather conditions we have had, it will be rather marvelous, but the old saying, "that you can never tell about a tobacco plant until it has been cut and cured," is a true one, and we are hoping for a good crop and for it to be well handled and well cured by the farmers.—W. B. KENNEDY.

The Princess of the Pool"

LEXINGTON, Ky., Sept. 1.—The pageant "The Princess of the Pool," written by Mrs. Henry Backus, of Cincinnati, and presented for the first time at Cynthiana, July 3, will be given by a cast of 300 men, women and children of Henry County in the Dick Smith woodland two miles from New Castle, September 28, Miss Verna Elsinger, director of social service of the Burley Tobacco Growers' Co-operative Association announced today before a representative meeting of Fayette county farmers.

Miss Elsinger urged that Fayette county send a big delegation to attend the second presentation of the pageant and she gave a résumé of the story which the pageant is supposed to tell, in the discovery of tobacco, the use of it by the early settlers, the visit of Princess Matoaka, or Pocahontas, to England with her maidens, the hardships of the tobacco growers of the modern period, their rescue by co-operation and the resultant happiness to thousands of people in the Burley states.

On that day Henry county people will be hosts to the visitors from other counties. All who can and will be present from other counties should notify Mrs. H. K. Bourne, at New Castle, of their intention so that the Henry county people may make proper provision for all. Mrs. Bourne has delayed assuming her duties as Democratic state woman chairman until the 10th of September in order that she may complete her preliminary duties in connection with the pageant.

Owensboro Outlook

OWENSBORO, Ky., Sept. 1.—Since our last letter of July 3, the growing tobacco crop in this State, which includes burley, fired dark, one sucker and Green River tobaccos, has been growing rapidly with abundant rains and now maturing rapidly. During August some wild-fire appeared in scattering crops in this section, also in some sections a good many fields show considerable firing of leaves at bottom of plants, as well as some loss from flooding rains during the month.

Increased Yield Predicted

We believe, however, the extent of damage to crop in this section from above cause is fully offset by the extra size made possible from abundant rains, and it is probable the total yield in pounds will exceed last year in proportion to the increased acreage over last year.

It is yet too early to determine quality and color of the new crop, though many fine fields now standing point to an ample supply of good quality and color provided weather continues favorable through the cutting and curing season now just starting in this section.

There is no special activity among members of the Dark Tobacco Growers' Co-operative Association in this section, though we assume this organization will continue to function with its present membership. Movement of old stocks of redried tobacco belonging to the Dark Tobacco Growers' Co-operative Association we understand has been slow, only a few carloads having been sold.

Two new independent loose-leaf floors will be added to the Owensboro market this year.—KENTUCKY & VIRGINIA LEAF TOBACCO CO.

DEALERS! JOBBERS! MANUFACTURERS!

You can now tell exactly by glancing at the Stamp the origin of the Tobacco you purchase as Porto Rican.

Every barrel or bale of Leaf or Scraps and every box of cigars coming from that Island must have affixed a White, Blue or Pink Guarantee Stamp.

WHITE: **Means that the Tobacco is all Porto Rican.**

BLUE: **That it is mixed with other than Porto Rican.**

PINK: **That it is all Foreign grown—simply shipped from Porto Rico.**

Shrewd manufacturers are purchasing Porto Rican Tobacco in larger quantities than ever for they are realizing more and more that the average American smoker prefers a mild cigar but insists on its having fragrance and bouquet.

No other Tobacco in the World combines all of these essentials to such a degree as Porto Rican. Either used exclusively in the filler or blended with other Tobacco it makes the ideal "all-day" smoke.

Manufactured Products

WASHINGTON, D. C., Sept. 5.—There were 589,176,020 large cigars manufactured in July, as compared with 585,874,114 manufactured in July of last year, according to figures which have just been made public by the Bureau of Internal Revenue, Treasury Department.

The Bureau's figures also show that in July there were 36,620,233 small cigars manufactured, which was a falling off from July of last year, which production was 42,341,286.

There were 1,587,663 large cigarettes manufactured in July of this year, as compared with 1,747,765 manufactured in the same month of last year. Also, there were 5,839,707,747 small cigarettes manufactured in July, as compared with 5,246,812,010 manufactured in July, 1922.

The Bureau states also that in July of this year there were 2,426,966 pounds of snuff manufactured as against 2,858,643 pounds manufactured in July of last year, while there were 31,209,715 pounds of tobacco manufactured in July of this year as against 32,590,617 pounds manufactured in the same month of last year.

Porto Rican production of large cigars is given by the Bureau for July at 8,439,150, as compared with 12,482,905 manufactured in July of last year. Also, there were 1,000,000 small cigars manufactured in July this year as against 952,000 in the same month of last year.

There were 77,000 large cigarettes manufactured in Porto Rico in July, as compared with 20,000 in the same month of last year, while there were 54,000 small cigarettes manufactured in July as compared with 42,000 for the same month of last year.

The Bureau states that there were 14,742,618 large cigars manufactured in the Philippines in July, as compared with 13,742,134 in the same month of last year. Also, there were 58,070 small cigarettes manufactured in July as against 58,307 in July of last year, and 140 pounds of tobacco was manufactured in the Philippines in July as compared with 408 pounds in the same month of last year.—LAMM.

Latvia Factories Working

WASHINGTON, D. C., Sept. 5.—Trade Commissioner Mayer at Riga, Latvia, in a report to the Department of Commerce, says that it is estimated that there are now about 16 tobacco factories working in Latvia. During the past year 537,000 pounds of tobacco have been manufactured in these factories, as follows: Cigarettes (Russian type), 719,000 M., cigarettes 170 M., Cigarillos 228 M., Cigars 1,500 M.—LAMM.

Pennsylvania Growers Harvesting the 1923 C

Cutting Not Yet General—About Sixty Per Cent of Lanca County Product Fully Ripened—Portions of Crop She Stand Several Weeks Longer—Yield May Yet Be Norr

LANCASTER, Pa., Sept. 3.—The harvest of the 1923 crop of Pennsylvania cigar-leaf is under way. The tobacco cutting is, however, by no means general, the condition of the crop being the determining factor in the housing of the seed-leaf.

Condition of the Crop

While about sixty per cent of the Lancaster county crop is fully ripened, good in color and quality and ready for the harvest, there is some tobacco that should stand for several weeks at least if a normal yield is to be garnered. A fair percentage of this underdeveloped leaf will be ready for the cutter in a week if the favorable weather conditions now prevailing continue.

The acreage of good tobacco which is now being housed has been at least doubled since the inspection tour held by the Growers' Association two weeks ago, by a period of damp rainy weather. The leaf made excellent headway under the influence of plenty of moisture and the prospects for a normal crop are considerably improved.

Some Growers Had More Favorable Weather

The tobacco grower is probably more the victim of circumstances over which he has no control than any other type of farmer, and chief among these is the ironic disposition displayed by old "Jupe Pluvius." Farmers in the vicinity of Washingtonboro were among the favored in Lancaster county this season in regard to rain. Sufficient precipitation had occurred during the Summer in this section to produce broad fields of well-developed and finely-textured tobacco.

Storm Does Serious Damage

During the early part of last week, when practically every grower in this vicinity who had a good crop was sharpening the rusty tobacco cutters and getting ready to house the leaf, two terrific storms broke along the river and in quick succession sent fatal barrages of hail-stones, riddling through the fields of tobacco. Farmers whose farms lay in the direct path of the onslaught of wind and hail suffered the total loss of their crops and those on the outskirts of the storm had their seedleaf badly damaged. Altogether the loss will total more than half a million dollars to the growers whose crops were destroyed.

Very little of the crop in this neighborhood escaped the violence of the storms, as few of the growers had made appreciable headway in the harvest of their tobacco. While affecting possibly less than fifty growers all told, the loss to these men is none the less serious, occuring as it does on their "cash crop" which they look to to tide them over the lean Winter months when the farm income is restricted.

Benefits of Care in Handling

Packers in Lancaster county have always laid, and with just cause perhaps, much of the damage in sweating the cigarleaf to the care which it receives before it reaches their warehouses. Lack of attention to proper curing conditions on the farm and carelessness on the part of the grower have been blamed by the packing fraternity for a large percentage of their losses. These losses are taken into account before the leaf is bought and, therefore, influence the price paid the grower to some extent. Packers have for years pointed out that if the grower would give his tobacco the scrupulous care which it requires while curing, he would benefit directly by b prices for his goods.

Too much moisture in the leaf, lac proper ventilation and uncontrol variances in temperature are declare chief causes of all the trouble origin in the curing shed. Otto Olson, tob expert, who, for the past fifteen y has given his best efforts to ironing such difficulties in the way of the ture and care of seedleaf, has set to on this problem.

To Test Artificial Heat

Artificial heat has never been use Lancaster county curing sheds. great success attained by this pra in other tobacco growing sections of country, as well as first hand informa gleaned from actual tests which he made, has convinced Mr. Olson that tobacco furnace offers the solution to problem. He has constructed a spa curing shed, divided into two large c partments, with a view to ascertai just what form of artificial heat will serve local growers.

Economy of Operation

On the one side of his double cu shed is a regulation Johnson tob curing furnace. The ease with wh this device is regulated and the ec omy of its operation are two po which Mr. Olson has taken into sideration as offering the most feas form of heat. The pipeless furn which has been installed on the ot side of the shed is also to be tes out. This furnace presents an adv tage in that its installation in the b ment of the curing shed also serves heat the stripping room which is adjunct to every tobacco curing she

Completed just in time for the coming crop, Mr. Olson has equipped new shed completely and awaits only the crop to be cut and housed to be his exhaustive experiments. The pr ticability of artificial heat has yet to demonstrated to the Lancaster cou grower, as well as what form of h will best fit local conditions and it these two things that the experimen has set about to accomplish.

Deserving of Much Praise

Just a brief eulogy on this man Ols He has, during the past fifteen yea given unselfishly and unremittingly undivided energy to the betterment the tobacco industry. His remarka developments in the culture and p duction of new and better strains cigarleaf have been accepted, on t whole, without a thought of their orig He has time and again, as in the instan just cited, stepped between the grower a packer and smoothed out some difficu which resulted in profit to both. He is master in cross-breeding and has pr duced strains which have done much ward making the present popularity Pennsylvania cigarleaf a fact. He h been the silent and unseen figure behi practically every advancement made the growing and packing industries du ing the past decade. Not that his achie ments have gone entirely unnoticed. T Leaf Tobacco Board of Trade is ful alive to the significance of his work a has made him an honorary member that body. His position as secretary the Lancaster County Growers' Ass ciation is evidence of the fact of h recognition in growing circles. For t most part, however, he works in silen and obscurity, and it is only when, aft years of painstaking labor, he brin

or Swims Rough Sea to Get Cigarettes

NDON, Aug. 20.—There are a num- of things a sailor has to do without n he goes to sea, but apparently the sh sailor must have his cigarette. A g sailor who had been obliged to go out a smoke for three days swam a mile through rough seas the other rather than "starve" any longer.

s ship was off the Isle of Wight the captain refused to let him have at to row ashore, owing to strong and a choppy sea, so he determined vim the half mile to shore. He tied ttle containing money around his with a handkerchief and slipped oard. Fearing that he might attract tion if he went into town when he d he waited on the shore and ht cigarettes from passersby. After ing one he put the rest in the bottle swam back to his ship.

Polish Match Factories

ASHINGTON, D. C., Sept. 5.—Accord- to a report received from Assistant le Commissioner Baldwin, at War- fifteen match factories are now in ation in Poland, employing about workers. Eight factories are run- double shifts. Four new factories under construction.

onthly production at present amounts 7,000 cases of 5,000 boxes each as pared with an average monthly pro- on for 1922 of 12,000 cases. For production 5,500 cubic meters of n wood are required each month.

esent export prices per case of 7,200 s are £5, £4.15 and £4.10, depending quality. The domestic excise tax recently been increased from 80 to marks per box.

Baltimore Market

BALTIMORE, Md., Aug. 30.—Gieske & Niemann, leaf tobacco merchants, make report as follows:

MARYLAND.—Receipts for the past week totaled 2,240 hogsheads, against sales of 1,781 hogsheads. The market ruled active with prices firm.

OHIO.—Receipts 139 hogsheads, with sales of 21 hogsheads.

Association Data

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them

Marshall Field wrapped with finest Vorstenlanden Java.

Philadelphia's Production Slows Down Slig

But Majority of Cigar Factories Are Operating on Full Basis—Renovations and Alterations Under Way Pre tory to Big Fall Business—News Notes.

PHILADELPHIA, Sept. 4.—A slowdown in production, due in a large measure to continued vacations by the more highly-paid employees, and by necessity for renovations and alterations for big fall business, is reported from a few of the larger factories, but the majority are operating their Philadelphia plants on full-time basis. Reports from the Pennsylvania and New Jersey plants of some of these concerns indicate that hands are now in larger supply than are orders and that temporary closedowns are taking place, or are imminent. The last week was the final one of vacation, and marked a virtual end of the summer season, and now that Labor Day has passed, all is set in factories for a long period of healthful, but not booming, prosperity.

The Federal Reserve Bank for the Third or Philadelphia District will make public this week a survey of the tobacco situation, advance sheets reading as follows:

Leaf Tobacco

"Packers and dealers report a fair demand for Pennsylvania tobacco. Small manufacturers have in general restricted their purchases to immediate needs, but in some instances increased inquiry from these sources is noted. Large factors have been somewhat more active in their buying.

"Packers state that little, if any, of the 1922 crop remains in the hands of growers. Wrappers of that crop are selling at from 25 to 30 cents per pound, and fillers at from 12 to 15 cents.

"Based on a condition of 76 per cent on August 1, the estimate of the 1923 Pennsylvania tobacco crop is 56,286,000 pounds. This compares with 56,760,000 pounds last year, and with a ten-year average of 54,878,000 pounds. Dry weather has retarded growth, and it is said that the crop is three weeks late, but more recently showers have improved matters considerably.

Cigars

"Manufacturers who produce nationally known brands of cigars report a good demand for their products, and an increase over last month in orders received. Others find the demand to be only fair, and reports of increases and decreases, as compared with a month ago, are about equal in number. Practically all orders are for delivery within the next sixty days.

"Prices are firm and the same as last month's, and manufacturers report only moderate stocks of finished products. Very few firms are increasing their stocks of cigars, and some are shipping as fast as they can be made. Raw materials on hand are in fair quantities.

"Reports of the Commissioner of Internal Revenue indicate that the total production of large cigars in May was 575,916,000, as against 532,534,000 in April, and 569,209,000 in May, 1922. Moreover, for the first five months of the year the production of large cigars was likewise in excess of that for the same period in 1921 and 1922.

"Some plants are operating at capacity, but the general average is 80 per cent, and some of the smaller plants are operating at as low as 50 per cent. Skilled labor is available in sufficient quantities, but some scarcity of unskilled workers is reported by several factories, with the result that a number of wage increases during the past month have been granted to the latter. The index number of this bank shows a decline in employment in this district by cigar and tobacco firms from 88 in June to 86 in July.

"Collections are fair and sho change since last month."

Wage and Employment Figu

The bank supplemented this st by a statistical statement covering and employment in 14 repres cigar and tobacco firms reporting It showed that the average wages July was $15.48, and taking 100 index number for the average w all of 1922, the results returned f year were as follows: January 10 ruary 115, March 112, and April June and July 110 each. Simil canvass of the employment si showed in these firms a total of and with 100 as the index numb the year 1922, monthly figures f year were: January 102, Februa March 92, April 91, May 89, Ju and July 86.

To Operate as Victory Cigar

The Victory Cigar Co. announc it has established a headquarter manufacturing plant at 240-242 S street for the manufacture and p tion of the Victory cigar, a 5-cent sition, hitherto manufactured an tributed by the 44 Cigar Sales Co tion at its 11th and Wharton plant. The owner of the brand is Frutiger, of Red Lion, Pa., wh tracted with the 44 Co. for its p tion. He will now manufacture i self under the style of the Victory Co., with George Taylor in cha the local sales offices. Mr. Taylo merly handled the brand with the That organization is now concent sales efforts on its own brand, the George, and to that end the speedi of production as well. Additional have been taken on, and 20 mor chines, made by the American M & Foundry Co., of Brooklyn, N. Y been added to the equipment. Th machines have been installed in t and Willow streets, and 11th and ton streets, factories of the 44 Co.

R. & L. Activities

ork County News

K, Pa., Sept. 5.—A boom in the industry is directly responsible for reased volume of business, during onth of August, at the York office S. Internal Revenue, in the sale of o, cigar and documentary stamps. tions for the month amounted to 47.17, which is considerably more ıe receipts for the preceding month ose of August of last year. From le of cigar stamps the government d $235,468.17. For the same month ago the receipts totaled $241,714.61. y of this year collections amounted 3,384.60.

w is given a record of the money ed from the sale of cigar, tobacco ocumentary stamps for July and t of this year and August of last

ust, 1922.—Tobacco, $9,680.67; ci- $229,593.16, and documentary, $2,- Total, $241,714.61.
, 1923.—Tobacco, $8,917.02; cigars, 51.43, and documentary, $2,606.15. $233,384.60.
ust, 1923.—Tobacco, $10,228.10; $235,468.17, and documentary, $2,- Total, $248,247.17.

Three New Factories

ee new factories for the manufac- f cigars were opened in York coun- ing the month of August. Their location and amount of bond re- by the government are here given: Beaverson, Windsor, R. D., No. d, $1,000. Arnold and Olphin, Fel- ond, $4,000. East Prospect Cigar 91 Edison street, York, bond, $3,-

Storm Does Damage

evere electrical storm, which passed he eastern part of York county t 27, did damage to the crops, in- g tobacco. The district affected s on the west by Stony Brook, on st by Wrightsville. The rain was panied by hail, some of which were arge. The vicinity of East Pros- Yorkana and Mount Pisgah is said to have particularly felt the severity of the storm. Tobacco and corn in the neighborhood of Porkana suffered from the hail, many of the tobacco plants being badly cut and torn. The early tobacco was the most affected, the late crop not being so far advanced as to have large leaves.

The employes of Bobrow Bros. cigar factory, Wrightsville, have been granted an increase of wages, which has already become effective. The rollers were increased from $4.80 per thousand to $5.10, and the bunch breakers from $1.90 to $2 per thousand. G. Mose Kelley, Long Level, is manager of the factory.

Joseph Nathan, who until five years ago, when compelled to retire on account of ill-health, had been employed as a foreman in the York plant of Otto Eisenlohr & Bro., died suddenly August 28, while seated in a rocking chair at a window of his home in this city. Death was stated by a physician who was summoned to have been due to a heart condition. He was 67 years old. Burial was made in a cemetery at Wrightsville.

The General Cigar Co., which recently leased the Kaltreider Cigar factory, Red Lion, has increased its number of employes.

Harvey A. Waughtel, of the cigar firm of Waughtel & Strayer, Red Lion, has returned from a business trip to Minneapolis.

An Unbreakable Cigar

BETHLEHEM, Pa., Sept. 1.—Carrying about a cigar in the pocket without fear of breaking it under ordinary conditions is a cherished dream of every smoker. After a whole year of research two professors of chemistry at Lehigh University, James S. Long and Henry Ullman, have just completed experiments making this a reality.

The Lehigh professors concentrated their attention on the binder of the cigar which is its main strength. The binder holds the filler and is immediately beneath the wrapper. It was found that tobacco stems which are left over after the tobacco is stripped and which are thrown away by most cigar manufacturers would make a very tough paper-like material resembling a tobacco leaf when rolled out on a paper pulp machine. To preserve its tobacco odor a liquid pressed from tobacco leaves was mixed with it when it was rolled out. This served as a very desirable binder but could not be used in the cigar because when smoked this substance would give off a burnt paper odor.

It was the problem of the chemist to remove the burnt paper odor of the binder when the cigar was smoked and to substitute the original tobacco odor. Removing of the obnoxious odor could not be effected by any mechanical means such as creating a draft through the cigar; it had to be done chemically. This was not only a chemical but also a legal problem for the law will permit the use of only a limited number of chemicals in a cigar. After numerous trials extending over the greater portion of a year the substance made from the tobacco stems was so treated chemically as to make a perfect binder. Hence the unbreakable cigar.

To note the repeat orders you will receive when using a good wooden package for your good cigars.

To Grow Bright Tobacco

(*Continued from page* 13)

shipped to a South Carolina market and secured a fancy price. The following year he said he did better. His judgment was that it would require two or three years to learn to grow it successfully. At the beginning Mr. Burroughs said it should be grown carefully, systematically and not too large acreage per grower.

Superior to Shade Tobacco Industry

E. H. Slappey, president of the Havana State Bank, said he attended the Hahira, Ga., sales and from his observation believed it was the best game he had seen for the farmer in his life, far superior to the shade tobacco industry. He could see no reason why bright tobacco could not be made a profitable industry here, but said a sales organization and men of experience would be needed to assist farmers.

S. E. Key moved that a committee of three be appointed by the chair to retire and select a committee of 12 to undertake the task of underwriting the $75,000 corporation. On this committee was appointed E. B. Shelfer, E. B. Embry and D. A. Shaw. Mr. Wight, of Cairo, was appointed as one of the original three, but explained that the meeting had reached a stage beyond where he was empowered to act and was excused.

The committee selected thirteen instead of 12 members, including D. A. Shaw, E. B. Shelfer, M. W. Munroe, A. T. Hearin, L. E. Hay, A. L. Wilson, Sr., Thos. Wight, S. E. Key, C. R. Shaw, E. H. Slappey, S. W. Anderson, Arthur Corry and E. H. Boykin.

There seems to be no question in the minds of those most interested that the farmers of Gadsden will go into the business on an extensive scale and prospects are that a warehouse will be established here. Whether or not the Georgia counties will enter into an agreement to cooperate is problematical, but even though they do not, that will not likely have any effect on the matter.

Among those from Seminole County, Georgia, who attended the meeting were: L. E. Hay, W. H. Vanlandingham, J. L. Dickenson, A. B. Ward and J. T. Roberts. From Grady County those present were: Thos. Wight, W. A. Carr, G. F. Shiver, Chas. Whirfield, Walter Gainey, J. W. Burroughs and Jos. Higdon.

Chicago

isconsin Has a Week of "Ruination Weather"

orrespondent Estimates Two Thousand Acres of Tobacco ave Been Spoiled by Hail—About Thirty Per Cent of orthern Crop in Sheds—Buying Not Notably Strong.

Edgerton, Wis., Sept. 10.—The weath- the 1st week was what one packer "ination weather," and it looks nun as if the weather man is try- p down the Wisconsin yield. In rt practically all the best-growing ns ave been sprayed by streaks of an the writer estimates that fully thousand acres have been spoiled, it eming to hail in some section de. Jackson county is the only i the north that has not reported hl damage. Independence, Blair, Viroqua, Cashton, Soldiers' iberty Pole, Gays Mills and ck are some of the towns that at least one hail storm. The o 1 the southern Kickapoo and Rck sections did perhaps the best the northern regions this year, and it all reported to be more or less hail cut. About hirty per cent of the northern is 1 the sheds, and there is only a ail percentage of that that is binders. ere is a large percentage of small to-

The bying of the northern is not on rce worthy of mention. The oiments of the past two weeks ght hae helped to bring it to pass.

ood Tobacco Spoiled

In the south, there has not been the il the has been in the north, but orrisorille suffered a severe hail storm at cut p a lot of good tobacco. The eather as been "rotten," however, and lot of ood tobacco has been spoiled, or ill be. It rained every day last week, d the obacco in the sheds started to rn. Many sheds sent their aroma to e road where it was very evident to yone who drove by. The yield per re in he south is so large this year at many of the farmers are crowding e lathstoo near together in the sheds. his rain weather is raising hob with it. While he tobacco in the sheds is not well off as that in the field, there is uch discontent over the effect of such eather here. It is not ripening fast ough to suit us. Some of it is trying start second growth. Many of the lds are showing pale-colored spots, and any operators shake their heads and ake some remark about 1906.

Then, oo, when the sun does come out, s lightnakes the southern grower un- sy ove frost, and many fields, at this riting, are being cut that are not ripe. en day of good, warm weather would wonders in the south. Many fields re all 1 the sheds to date, but in the ain, abut eighty per cent of the south- n tobaco remains to be cut down.

Buyrs Visit Southern Sellers

Buyers are visiting the southern sellers, nd pleading with them to hang their to- acco fa apart in the sheds. It is so rge that it hangs down from one ringer o another, and much air will be eeded. Southern crops have brought as igh as 7 cents, it is reported, and the ost of he two-price contracts hovered t 20 cents or above. There is perhaps a hird of the tobacco bought to date in he sout that was written on the books at fifteen to nineteen cents straight.

Haskins, Soulman, Grundy, and Spitzner continue to be the main operators in the movement to date.

The pool and Bekkedal renew their trials and tribulations when the appealed hearing comes up before the Supreme Court on September 22.

John Holtan and Lars Lien are riding hard among the farmers this year, with words of cheer and advice to the growers.—Badger.

Fire Causes a $100,000 Tobacco Loss

East Hartford, Conn., Sept. 8.—Fire of unknown origin, but supposed by many to be accidental, destroyed three tobacco sheds near Silver Lane with their valuable contents, owned by the American Sumatra Tobacco Co., about 8 o'clock this evening, causing a loss of nearly $120,000, as estimated by William F. Kahn, eastern general manager of the company, and Superintendent Edward T. Sanford of the company's Silver Lane plantation. It was swift in its progress and in twenty minutes after the flames were first seen, little was left besides high beds of embers and smouldering prostrate bents and sills. Sheds on each side of those burned were saved by the quick work of Chief Frank Meunier of the East Hartford Fire Department and his men.

Several hundred automobiles—one estimate is 450—sped to the scene, choking traffic. Many of these were from Charter Oak Park and were drawn by the lurid glare which spread far into the sky and was visible for many miles. From the Bulkeley Bridge to the Silver Lane corner the highway was jammed. In places on the boulevard machines were attempting to travel three abreast. East Hartford policemen and volunteer traffic directors had their hands full for an hour in the effort to preserve control.

Silver Lane Sheds Burned

The sheds burned were Nos. 2, 3 and 4 in the series of eleven which the Silver Lane plantation has about 400 yards south of Silver street and near Tobacco avenue. Shed No. 1, at the west end of the row, was saved, as was Shed No. 5, east of No. 4, by the protective work of the firemen. All of these buildings have spruce frames with hard pine boards and sheathing.

Second priming shade grown was the main contents. This is a very valuable picking, worth perhaps about $3.50 or $4 a pound. The sheds were valued by Mr. Kahn at $700 an acre. One was a five acre structure and two held ten acres each. Mr. Kahn's figures make the valuation about $18,000. The tobacco was worth, Mr. Kahn calculates, about $100,000. It was the best crop in several years. Most of it was harvested some time ago. Some was ready to be "taken down" at the first "damp."

Superintendent Sanford said that the fire was not due to the use of charcoal in curing the drying leaves, as it was a considerable time since charcoal had been used in any of the sheds. He is inclined to ascribe the origin to some accidental cause.

Mr. Kahn believes that the fire may have been originated by some intruders who carelessly dropped a spark or a cigar butt. The lumber in tobacco sheds is often highly inflammable, being well seasoned pine and spruce with open spaces in the bents and tiers and sometimes a draft toward the peak, and a blaze once started is difficult to fight.

Mr. Kahn's recollection is that the sheds were reasonably covered by insurance and that this had been placed by the officers in New York City, where the company has a large office, who attend to this detail, among many others. He was unable to tell what the insurance was.

The company has grown this year about 2,500 acres of shade and about 1,000 of tobacco in the open, in the Connecticut Valley, Mr. Kahn estimated. The twenty-five acres burned last night were but a "drop in the bucket," compared with its shade-grown crop.

The fire left a broad low belt across the tobacco field for about 600 feet, a glowing rosy line reaching in points twenty feet high. It left also a faint odor of tobacco. Beyond the sheds are fields of tent tobacco, which seemed last night to be undamaged.

The Silver Lane plantation employs about 140 hands, about half of whom live in East Hartford. The rest stay in Hartford. Of those living in East Hartford a large fraction is colored and came originally from Georgia.

The Market as Seen by a Close Observer

Due to the holiday last week, a great many of the large manufacturers, as well as the smaller ones, temporarily shut down, which gave them an opportunity for the first time in many months to take up inventory.

The feeling among most of the manufacturers at the present time is that there will be a great demand within the next thirty days for all the cigars they have on hand, and it would not be at all surprising to see an oversold condition in the cigar manufacturing industry in the very near future.

Prices Steadily Rising

The tendency of prices in the leaf market, both domestic and foreign, has been steadily upward, and this cycle has not seemed to reach any downward curve up to the present time, as far as 1923 is concerned. With the contracting for the new Wisconsin, as well as Connecticut broadleaf and Havana seed at what manufacturers consider ruinous prices, there does not seem to be a possibility of there being a weakening in the leaf market for quite some time. However, in the final analysis the law of supply and demand will settle the question, irrespective of prices the packers pay the farmers, for there is no law in leaf tobacco circles, or in cigar manufacturing circles, either, that a legitimate return on the investment is required when merchandise is bought or manufactured on a speculative basis.

There is no doubt but there will be an acute shortage within the next six months of desirable binder tobaccos, and the floating supply of clean, filler tobaccos is practically nil. However, the policy of hand-to-mouth buying which has existed for the past six months should in a way eliminate the speculation, which was unwarranted in the 1923 crops. There seems to be no indication of any let-down on prices as regards the old tobacco, either in packers' or manufacturers' hands, but every period of inflation must have its definite end. A prognostication at this time that the Fall of 1924 will see a lower market may seem rash, but is based rather on an abundance of 1923 crops rather than any clairvoyance of the writer.

There seems to be a decided shortage in light colored wrapper tobaccos, and both Sumatra and shade of the 1922 crops have been moving more than freely.—Market Observer.

Federal Crop Report

Washington, D. C., Sept. 11.—Tobacco is affected by wildfire in a number of states and the mosaic disease is reported to be spreading in Maryland, according to the Bureau of Agricultural Economics of the Department of Agriculture. The crop is being harvested, though it is late on the whole, and a considerable part is in danger from early frost. The condition as a rule is good.

Pennsylvania tobacco has shown some improvement but still needs rain. The crop is very uneven and about two weeks late. Cutting and curing of tobacco continues in Maryland and Delaware. Yields are excellent except when crop was hurt by the tobacco worm. Much of the crop is late. Wildfire and mosaic disease are reported to be spreading. The crop has improved rapidly of late in Virginia and has made rapid growth. Too much rain in spots and wildfire has caused some damage. Many fields are late and are in danger of early frosts. The prospect is for a heavy yield of all types in Kentucky though there is some wildfire and rust mostly in the dark districts. The crop has been harvested in South Carolina and considerable quantities are being housed in Tennessee and North Carolina. The crop has made favorable progress in Wisconsin and Indiana.—Lamm.

Says Growers Would Do Better Out of Pool

Johnson City, Tenn., Sept. 8.—Evan S. Rees, proprietor of the Washington County Warehouse in this city, has just returned home from an extensive trip through the largest tobacco-growing centers of Kentucky. He visited Louisville, Shelbyville, Frankfort, Midway, Lexington, Danville, Mt. Sterling, Winchester, Cynthiana, Paris and points close to Cincinnati and at these points he talked with growers, tobacco dealers and merchants and tried to inform himself of the true tobacco situation, that he might be in a position to be of service to the farmers of east Tennessee.

Mr. Rees said in speaking of the crops: "I never saw a better or more uniform crop in my life. I saw crop after crop, from 10 to 50 acres, that was all of one size, uniform in color and being cut perfectly ripe. The crop has made a wonderful growth during August and I am of the opinion that there is the biggest and best crop that has ever been raised. Of course, weather conditions must govern the curing of the crop and since this is, in a way, a wet weather crop, there

EXCLUSIVE TERRITORY OPEN TO JOBBERS

will be a great tendency to house-burn if the weather turns off warm and foggy, but so far with 50 per cent of the crop cut, there has been no evidence of house-burn or moulding.

"I talked with many members of the so-called co-operative movement and found, contrary to the propaganda being spread over this section, that there is a great deal of dissatisfaction and unrest among the members. They have received a little more than half as much for their last crop as east Tennessee growers received for theirs and no prospect of getting more until their entire holdings of the co-operators are sold, about 65,000,000 pounds, which must be sold at about 50 cents to equal our prices after taking out the large fees, storage, insurance, redrying expenses and large salaries to the numberless officers and organizers.

"I was told by some of these farmers that selling fees amounted to anywhere from $1.50 to $2 per 100 pounds, which is quite different from the small fees they have to pay in this section of from 75 cents to $1.10 per hundred and the farmer received all of his money and disposed of it at one time and at green weight, and for more money than the Kentucky farmer is getting for his well classed and redried crop. I asked one farmer how he paid his bills and he said he didn't—that the merchants had to carry him, or if he needed money for his taxes and clothes for his family, he was compelled to go to the bank and borrow his own money on his receipt and pay 6 per cent or 8 per cent for it. Several farmers told me that they had been forced into the pool last year by threats and as a consequence had quit growing tobacco and taken a job as day laborers in the town of Lexington. One merchant told me that they were simply carrying the load to enable the pool people to speculate on the tobacco crop and that it was hurting bad, as collections were fearful and that he was unable to pay his past due bills.

"For quite a time I have been trying to learn just why the officials of the Kentucky pool were so anxious to tie up the crop grown in this section. There is not over 75,000,000 pounds grown in east Tennessee, southwest Virginia and western North Carolina, which is less than 5 per cent of the entire Burley crop. Why were they so anxious to spend a lot of money, sending in paid speakers and organizers? I have known Jim Stone and Ralph Barker (the head officials of the co-operation who draw over $40,000 per year of the good farmers' money) all my life and personally they are good fellows and I like them, but who ever heard of their being philanthropists or Moses leading any section of the country or people out of darkness, until the mean crop of 1920 came along and nearly cleaned every warehouseman and tobacco dealer? Then they saw the light, of large salaries, after that great organizer, Mr. Sapiro from California, came to Kentucky.

"And I have come to the conclusion that there are wonderful possibilities of east Tennessee becoming a great tobacco growing section and there is a movement on foot right now in Kentucky to cut our next year's crop and since the co-ops control its membership, the tobacco industry of this section will be set back 20 years. All the efforts of the Chamber of Commerce of Johnson City, the Burley Boosters of Greeneville and East Tennessee Tobacco Association of Knoxville, who have spent $23,000 alone, will be in vain. The merchants of Greene and Washington Counties will suffer for the need of a ready money crop; the bankers' large balances will shrink to comparatively nothing and the farmer who has gotten on his feet through growing tobacco during the past six years, by selling for more money than the Kentucky crop averaged or the pool received, will go back into debt and their families will suffer. East Tennessee has been on a boom, not altogether because of the $5,000,000 tobacco money coming into the section, but that has played a part and it will be a crime to throw anything in the way of this expansion and I would advise the merchants and bankers as well as the farmers of this section to go as I have done, to the sections of Kentucky where you are unheralded and unadvertised for days before you arrive and make your own personal investigation.

"I understand that it was stated before one of the dinner clubs, by one of the speakers that the committee that went to Kentucky came back unanimous in favor of the organization. The only two I have talked with—Ed Mathes and Squire Grant Moore, two of the largest growers in the county—told me positively that they were never in favor of it, nor would they sign up their crops. They are good growers and handlers and have always gotten more for their tobacco than the pool and were contented.

"I am not afraid of being misunderstood in taking the position I have in this matter. Every grower in this section knows I have worked hard for their interests; I have contended for everything that goes to make for their prosperity and am for any organization that will be for their betterment, but I can't see this high-salaried Kentucky organization. We have plenty of men in this county capable of leadership and the tobacco industry is plenty large enough to take care of its own affairs. We cannot grow hemp or wheat as a big money crop—nor do we feed hogs as they do in Kentucky, therefore, to my mind it will be positively unfair to foist on the grower of tobacco in this section an organization that we know absolutely nothing about and which will eventually mean the discontinuance of their growing their only ready money crop, for the benefit only of the large growers in Kentucky, the paid organizers and the high-salaried officials. I saw the high-handed Night Rider troubles of Kentucky when an attempt was made to cut the Kentucky crop a few years ago. And this condition will surely prevail when the citizens of this east Tennessee county are told they must not grow tobacco. As late as this spring this condition prevailed in Macon County, Kentucky, when plant beds were scraped clean and farmers were threatened because they desired to grow tobacco and pay their debts.

"I feel it's a little early to make any prediction as to prices. I know we have a very large crop in Kentucky and about 65,000,000 pounds in the hands of the pool of last year's crop, which they say must be sold at very high prices before the manufacturers can look at the new crop, so our crop on the loose leaf floors should sell as well as the sales on the South Carolina and eastern North Carolina, which are at most satisfactory prices. There is one thing conclusive if the farmers of this section will stay out they will be able to sell their tobacco quick and at good prices. So now is the time to think. Better be safe than sorry."

Speakers Laud the Pool System

MADISONVILLE, Ky., Sept. 8.—In the old-fashioned camp meeting way, with a basket-dinner on the ground, more than 1,000 "believers" heard six speakers expound the gospel of co-operative marketing of tobacco at the barbecue given here today by Hopkins County members of the Dark Tobacco Growers' Co-operative Association, as part of the sign-up campaign in the stemming district.

The speakers were Clifton Rodes, chief of the field service of the association; Judge "Bunk" Gardner, Mayfield; R. E. Cooper, director of warehouses; Geoffrey Morgan, secretary of the Kentucky Farm Bureau Federation; Prof. W. S. Anderson, College of Agriculture, Lexington, and Robert Hall, organizer for the association.

Local leaders made brief talks.

Mr. Rodes' statement that "there are no problems of organization and management that we cannot solve, with the aid and assistance of our members," was cheered.

Judge Gardner outlined the story of the tobacco industry and the part played by co-operative marketing in stabilizing prices. He warned of the activity of interests inimical to the farmer and urged continual vigilance against propaganda by those who wish a return to the system of dumping tobacco on the market.

Mr. Cooper declared that less than one-half of one per cent of the tobacco pledged to the association was dumped on loose-leaf floors.

Mr. Cooper also pointed out, and was cheered by the crowd, that over Black Patch as a whole, the price ceived by the outside growers was than that received by the member gro

Mr. Morgan pointed out the simil between the farmer producing tob and the manufacturer of steel and sh that only by employing expert sale and selling through a single outlet c the farmer hope to meet on equal t the organized tobacco interests.

Professor Anderson outlined the s ices of the College of Agriculture to tobacco grower.

Childs Purchases Unsold St of Laks Cigars

Frank E. Childs & Bro., Inc., o Front street, New York, agents for Germinal Cigar & Cigarette Factory Inc., of Manila, announce the acquisi of the entire unsold stock of Gern brands from the Laks Cigar Co., o John street, New York.

Stock Comprises Recent Arrival

The stock acquired, amounting 1,100,000 cigars, all of which are re arrivals, consists of: Perfectos, 1/ banded, Germinal and Flor de Leg brands; Vencedores, 1/20th banded, minal and Flor de Legarda brands; tains, 1/10th, in bundles of six, Ge nal brands; Londres, 1/10th, one bu Germinal and Flor de Legarda bran

This addition to their large holdi and shipments in transit, due to ar shortly, enables them to fill all or promptly. Frank E. Childs & Bro., have also on hand, available for im diate delivery: Germinal brand Ch pions, 1/20th banded, Grandes, 1/1 ten in bundle, and Captains, 1/10th, s in bundle.

Tobacco Co-op. Associatio

RALEIGH, N. C., Sept. 10.—There nearly 250,000 tobacco co-ops in United States, according to member gains recently reported among the ganized growers of the Carolinas, ginia, Kentucky and other states.

On June 1 there were 240,000 mem of the five big tobacco associations, cluding those of the Virginia-Caro growers, the dark and burley gro of Kentucky, Tennessee, Ohio, West ginia and Indiana, and the smaller ganizations of Wisconsin and Conn cut. Since that date the tobacco gro of the Carolinas and Virginia h added over 1,500 members to their ganization. The burley growers of K tucky have climbed from 85,000 to 90 members, and other associations h continued their steady growth.

A new high record for deliveries the 1923 crop to the Carolina-Virg association was established last w when the South Carolina and East Belts together added 7,500,000 pounds the receipts of the Co-operative flo Several of the co-operative markets eastern Carolina last week recorded largest single day's receipts in their tory. Among these were Kinston, w received 160,000 pounds of tobacco Friday; Richlands, which went as h as 80,000 pounds in one day; Smithfi Ayden and Fremont ran at times fr 50,000 to 60,000 pounds.

A. V. Bobbitt, association wareho manager for eastern North Carolina, ports that first cash advances by the sociation are now averaging over 50 cent of the prices being paid on most the auction floors, and states that n members are signing with the associat at many points.

Every tobacco grower who started s against the tobacco association in Summer of 1923 is now under an inju tion of the court, according to Col. W. Joyner, its attorney at Raleigh headqu ters, who recently stated that the as ciation has employed local counsel many points and will protect all lo members against contract breakers, prompt legal action.—S. D. FRISSELL.

Western Business Brisk

W. B. Shaw, of Theyskens & Sha leaf merchants, 136 Front street, is present in the western territory, where is booking many good orders.

The Second International Tobacco Show

The National Exposition Co., which anaged the Tobacco Show in New ork last winter, is starting a very ac- ve campaign to make the second show en bigger and better. The managers port that a considerable number of ncerns have signed for spaces, and nong them are the following:

.H. Duys & Co., Inc.; Bobrow Bros.; ax Gans Sons, Inc.; Frau & Pena; urlach Bros., Inc.; Porto Rican To- .cco Agency; Hamburger Bros. & Co., c.; Isidore Cohen; *United States To- cco Journal;* Cullman Bros., Inc.; In- rnational Cigar Machinery Co.; Himoff)bacco Machinery Co.; Rochester Fold- g Box Co.; Connecticut Valley To- cco Association; Cardwell Machine).; Josephson Bros.; Miller, DuBrul & :ters Mfg. Co.; Philippine Tobacco gency; Adolph Frankau; Haywood, rasser & Voight; World Match Co.; ter J. Schweitzer, Inc.; C. J. Waxel- um; F. E. Richardson & Co.; Selgas Co.; Griffin Tob. Co.; Alfred Orlik; ad Machinery Co.; Master Pouch To- cco Co.; TOBACCO.

In addition to the foregoing, which are tually signed up, officials of the Na- nal Exposition Co. say that a large mber of spaces have been definitely re- ved, and contracts are pending with ny other concerns which will take up ore than fifty per cent of the remain- g spaces, which strongly indicates that ery available foot of show space will occupied, in the big 71st Armory, nen the next Exposition takes place, nuary 28 to February 2, 1924.

Among the newcomers this year are au & Pena, of Philadelphia, and the ow management states that at least e other Philadelphia cigar concerns ve definitely put themselves on record, ying that they will contract for spaces nen next called upon in Philadelphia.

Considering the success of the last)bacco Show, despite its smallness, ves every indication that the next To- cco Show will be a *big success.*

The National Exposition Co. officials ates that they feel so confident of the ccess of the coming Tobacco Exposi- n that they are going to a big expense d are putting their entire organization hind the show, and they assure us that fore the end of the present month they ll be able to announce many new big hibitors.

Urged to Fire Heavily

HOPKINSVILLE, Ky., Sept. 8.—Members the Dark Tobacco Growers' Co-opera- e Association are being urged to fire eir tobacco heavily this year. The fir- g season is now getting well under ay.

Dark fired tobacco, to be at its best ust be fired until thoroughly dried out. ven the main stalk of the plant should absolutely dry, and the leaves take on e rich reddish tinge that comes only om an abundance of smoke and long- ntinued heat. The dealers agree with e association officials that tobacco eavily fired in proper manner will com- and a decidedly better price than that hich is poorly cured. So it is a matter dollars and cents to the growers to the work properly and thoroughly.

Demonstrations in the proper methods firing tobacco will be held in all the unties in the dark fired territory and so in the fired sections of the Stem- ing District. Thoroughly experienced en will be in charge of these firing monstrations, which will be held in the rns of association members, and to hich all the tobacco growers of those ighborhoods will be invited. These monstrations are being held to impress on the growers the importance of roper firing and how it will make their op incomes larger.

Damaged by Blackfire

Reports from the crop show that in any sections it has been damaged by ackfire. The rainy season is held re- ponsible for the blight, which will re- uce the amount of the crop materially. he rains have also damaged the crop by rowning it out in a number of places.

The membership drive in the district est of the Tennessee river, where Clif- ton Rodes, Director of Field Service Division of the Association is in personal charge, is proceeding at a lively clip. To help arouse enthusiasm and bring the people together to discuss the tobacco problem and the solution offered through the association, big barbecues are planned to be held in Henry and Weakley Counties in Tennessee, and in Graves, Fulton, Ballard and Marshall Counties in Kentucky.

Mr. Rodes has expressed much satisfaction with the progress being made and as evidence of what is being done cited that Hickman County is already signed 95 per cent strong and Carlisle County is a close second with 90 per cent. Other counties in that section are coming strong and promise to be among the contenders for highest honors.

A part of the campaign in the western district is the taking of an accurate tobacco census for the entire district. This is to be made by personal visits through the country and listing of the exact number of acres of tobacco each man has grown. This will give highly valuable information of especial advantage to the Sales Department of the association.—*Press Service Bureau.*

New Rochester Folding Box Representative

ROCHESTER, N. Y., Sept. 11.—The Rochester Folding Box Co. makes this announcement:

"William A. Reckeweg, formerly Purchasing Agent for Bayuk Bros., Philadelphia, has severed his connection with that concern to handle our account in and about Philadelphia. He has an office in the Drexel Building, Philadelphia, and is prepared to give the requirements of the cigar manufacturers in that general locality his personal attention."

Of course, it is hardly necessary to say that the items which the Rochester Folding Box Co. is prepared to furnish the cigar manufacturers are shell and slide packs and display containers.

Porto Rican Grower Here

Balazar Mendoza, a prominent Porto Rican grower, is in New York for an extended visit, during which he expects to make a close study of the prevailing conditions in the market. Mr. Mendoza is enthusiastic over the progress of the Porto Rican tobacco industry and optimistic regarding its future.

Otis Smith

Otis Smith, president of the George W. Helme Snuff Co., 111 Fifth avenue, died Monday of last week at Battle Creek, Mich., following a five weeks' illness. He was born in Louisiana, Mo., about sixty years ago. He had spent many years in the tobacco business, mostly with the American Tobacco Co. He made his home in this city in the Apthorp Apartments, Broadway and Seventy-ninth street. Services were held September 4, in St. Paul's Methodist Episcopal Church, West End avenue and Eighty-sixth street, New York.

Twentieth
ANNIVERSARY

A Unique Record

Not another cigarette that was popular when Fatima was introduced, over twenty years ago, has a big national sale today.

Fatima has out-distanced them all, maintaining its sales-leadership over all other brands at or above its price. This record marks it as the most skillful blend in cigarette history.

Today Fatima is everywhere recognized as the one cigarette of really exceptional quality at a reasonable price.

FATIMA

LIGGETT & MYERS TOBACCO CO.

They Need More Light

About all it needs to make this county he greatest of all in this State, in the roduction and sale of tobacco, is more nowledge on the part of the numerous rowers of the crop.

There are hundreds and hundreds of hese Horry tobacco growers. Hundreds nd hundreds more will come in from ear to year as the people, more and nore, have to turn to the soil and the nost likely money crop, under present onditions regarding cotton which will revail, no doubt, for a number of years o come.

Examination of the finished crops as hey are brought here for sale will conince any one. There is a woeful lack of nowledge on the part of a great maority of the men and women who prouce these crops.

As to the mistakes that may have been nade in planting, cultivating and gatherng in the crop, it is difficult to say from n examination of the leaves on the varehouse floor. One can only have his pinion as to what caused certain signs o appear on the leaves and which caused he product to take a lower grade than t otherwise would have taken. Of ourse the picking of the leaves while too reen, or leaving them in the field until ver-ripened, may show as plainly to he experienced tobacco man as would reat holes in the leaves eaten out by vorms. There may be a way to tell hat suckers had been allowed to take ossession of the leaves. There may be igns of too much or too little rain while he crop was maturing, and there may e signs of starvation of the plant showng a lack of fertilization.

It is in the grading and tying of the eaves that the plainest signs of ignorance appear. There are some men raising toacco this year without any knowledge or training of any kind in the matter of grading and tying the crop for market, judging by a sight which can be seen any day on the market here.

One day last week a member of the co-operative association brought his tobacco to the warehouse in such condition that as the force had very little to do that day, they tore up the bunches into which it had been tied and separated it into the grades, then re-tied it. This pile had been simply gathered up in handfuls and tied up without any regard to grades whatever. Of course it is impossible for the limited force at the cooperative warehouses to tear up and retie all of the many crops that are coming in. This could not be expected. On the auction floors nothing of the sort is ever done. One of the ways of making money out of tobacco, without having anything to do with the raising of it is to buy the piles on the warehouse floor with all of the grades flung together into one heap, then re-handle and re-grade this along with other piles bought the same day and when it is again sold, by the buyer, it brings a better price because the higher grades have been separated from the lower, and by that means it can bring all it is worth.

If I were a tobacco grower I would read and study the entire subject of the planting, cultivation, gathering, and grading into proper grades. The better ways of handling each situation that arises in the course of the growth of my crop, would be employed by me. I would experiment every year. This is the plan being followed now by many of the growers who are making good in tobacco growing.—*Conway (S. C.) Herald.*

Italy's Tobacco Trade

WASHINGTON, D. C., Sept. 10.—Italy is a large consumer of American dark leaf tobacco, and the Government Monopoly maintains a special purchasing organization in the United States; it being provided by law that all purchases be made at the source of production by authorized agents of the government, according to a report to the Department of Commerce from Commercial Attache McLean at Rome. Both the consumption and the production of tobacco in Italy have increased, but the rate of increase has been greater in the case of consumption, and imports have consequently risen. In 1922, 22,377 tons of tobacco were imported as compared with 18,790 tons in 1914, and of this total the United States supplied 18,272 tons. Whereas, in 1913 the local production was only about 10,000 tons, for the current year it is now estimated by Italian authorities at about 33,000 tons. The increase is most marked in the case of light tobacco for cigarettes, the production of which has risen from 1,730 tons to 11,700 tons, while the production of tobacco of the Kentucky and similar types has increased from 5,330 tons to 17,300 tons, and the production of other types of tobacco from 2,861 tons to 4,000 tons. The production of cigarette tobacco has probably already reached its maximum, while that of Kentucky may, according to a well-known authority, reach a total of 24,000 tons. The increase in the consumption is confined to cigarette tobacco; and, that of the strong cigar tobacco is tending to decline in proportion. It is probable that imports of American tobacco have reached their maximum, and if the local production of dark tobacco continues to increase imports will tend to decrease. Italy's imports of manufactured tobacco are decidedly small and owing to the abundance of cigarette tobacco the possibility of building up an export trade in cigarettes is being considered. The United States normally supplies only an insignificant quantity of manufactured tobacco to Italy.—LAMM.

Owensboro Outlook

OWENSBORO, Ky., Sept. 8.—Rains and cloudy weather during the week have checked tobacco cutting and there has been little put in the houses. The same weather conditions have been somewhat hurtful on much that had been housed, by causing it to houseburn. However, should next week prove a dry, favorable one the greater part of the tobacco now standing will probably be cut.—J. S. PHELON.

Off to Florida

John L. Fielding, of Cullman Bros., Inc., is scheduled to depart for Florida and other southern points this week to further the interests of his organization in that section.

Getting Customers to Make Frequent Visits

By WILLIAM H. FRANKLIN

suppose it is in the nature of things ıen to do more or less visiting among favorite tobacco stores rather than ıing all their visiting and all their to one particular store," said a ssful middle western tobacco re- "But that doesn't stop me from g to get as much of the trade of all y customers as I possibly can.

etting the utmost possible amount of rade of all of my customers re- s itself in the last analysis into a ɔsition of getting these customers to my store almost exclusively. The times I can get a man into my the more of his trade I will get he less time he will have for visit- ther stores and giving them part of rade.

o this thing of getting as much trade ɔssible from all of my customers is r a matter of getting the customers isit my store constantly and fre- tly. And I flatter myself that I am successful in doing this.

low do I do it? How do I get my ɔmers to make frequent repeat visits y store?

ll tell just how I do it and the tell- will undoubtedly prove to be of in- t and profit to other tobacco retailers are seeking to get just as big a of the total tobacco trade of all of patrons as they can possibly get.

fy first step is to make all the men come into the store feel that they mighty welcome and that we are ty glad to see them. This is a com- ively easy sort of an atmosphere to e in any tobacco store. All that is ed is genial salespeople who make ds readily and who are good mixers.

he second step is to so arrange the that there will be so many things terest in the store to all the patrons they cannot keep away.

is along this particular line that people tell me our store is especially interesting. Certain it is that we have gone out of our way to provide as many things of interest as possible about our store.

"For instance, consider our baseball scores. We not only have a board on which the daily games are chalked up but we also have another board on which the total scores of each team from day to day through the week are chalked up. There are quite a large number of men in most cities nowadays who are greatly interested in these day-to-day scores of the teams in the main leagues and so we find that this feature is successful in drawing back numbers of men to our store day after day during the baseball season. All of which, of course, means that we get the major portion of the tobacco trade of these men because they have comparatively little time for visiting other tobacco stores when they are coming to our establishment every day.

"Also we have our baseball score boards so arranged in our store that the men who want to look at the scores and, perhaps, study them, can do so without being jostled around or feel that they are getting in the way of patrons. This means that quite a large amount of space is devoted to our score boards and to the open space in front of them, but we feel that this space is put to the best cause to which we could put it.

"We also have posted up on a board in a prominent position in our store all the time cards of the local steam, interurban and bus lines. This feature is always productive of a great amount of attention and we know for a fact that many of our customers come into our store just to refer to these time tables. This means that these customers are making repeat visits to the store and that they have just that much less opportunity for visiting the stores of our competitors, which means that our competitors are getting just that much less business from these customers of ours.

"Another plan that we work to a frazzle in our store is in saving magazines and newspapers for our patrons.

"Every tobacco store that handles newspapers and magazines has some patrons who buy certain publications regularly. We always watch for these individuals and when we find that a man is in the habit of buying some certain weekly publication from us, for instance, each week we say something like this to him:

" 'There's quite a run on these magazines now. They may get sold out before you come in here next week. Suppose we save you a copy each week, then you will be sure of it even if you can't get in the store at the night time to get it.'

"This sort of a suggestion nearly always makes a hit with the customer and he tells us to go ahead and save the magazine for him. This then means that this customer has a regular weekly connection with this store which is in his mind every week and which brings him to our store without fail every week. In other words, we are making sure of frequent repeat visits from this customer and are, therefore, assuring ourselves of more regular business from him.

"At our store, too, we make a point of not handling subscriptions. Of course it is only semi-occasionally that a man asks us to send in a subscription to a magazine for him. But when he does so we give this sort of an answer to him:

" 'Sorry, but we don't handle subscriptions. But if you want us to save the magazine for you each time that it comes out we'll be glad to do so. We're saving this publication for quite a number of our regular customers now.'

"In most cases we can talk the man out of his idea of sending in a subscription for the publication and can get him to let us save the magazine for him each publication date.

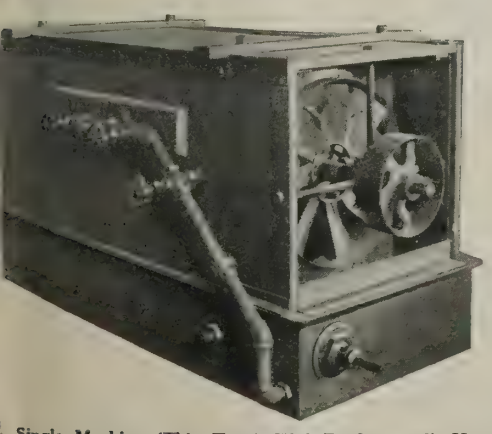
"We figure that if we handled subscriptions we would be hurting ourselves, for we would be cutting down the number of reasons why the man who wanted to subscribe for the publication should visit our store. And we don't want to do that—what we want to do is to increase the number of reasons why he should visit our establishment.

"Our third step in increasing the frequency of our regular customers' visits is by impressing customers with the fact that they are missed when they don't show up for a few days.

"Whenever a regular customer doesn't appear for a few days or for a week and then does show up, we always greet him about like this:

" 'Hello, Bill, where have you been? There was a fellow in here looking for you the other night.'

"This kind of a greeting accomplishes two things—in the first place, it makes the customer realize that he is quite a factor in our store and that his absence has been realized by us and that he has been missed. Also, by telling him that someone has been inquiring for him it makes him feel that he has missed something by not showing up as per his usual custom. All of which has the effect of bringing this customer back again pretty steadily for quite a long time before, for some reason or other, he once more disappears for a short time.



"We are constantly on the lookout for new methods of bringing regular customers back frequently to our store. We handle dance tickets, basket ball tickets, football tickets, etc., for regular customers just for this reason. We gladly allow regular customers to place advertising cards in our show windows when they want to do so. And we encourage men and young men to stand in our store and gossip and use our store as a meeting place when they have engagements with other young men.

"The bulk of the average tobacco store's business comes from its regular customers. And the more frequently the store can bring these regular customers back to the establishment the more business the store will do and the more money it will make.

"And here's hoping that the suggestions contained in all this help other retail tobacco dealers in increasing the frequency of their regular customers' visits."

A. N. SHEPARD & SON
Growers and Packers of Connecticut Shade Primed and Broadleaf
HARTFORD, CONN.

Mr. D. P. Gosline, July 14th, 1923.
6 Northampton St., Boston, Mass.

Dear Sir:

We have your favor of the 8th inst. and in reply to same would advise that we have used your large humidifier with the Duct System during our last packing season. It has proved satisfactory in every sense of the word. Our tobacco was kept in proper shape during the process of assorting and packing.

We were also very well pleased with the temperature feature, as we were able to regulate the temprature of our rooms from this humidifier except on extra cold days when coils were naturally used in addition.

The smaller humidifier, which we used in our bulk room, gave also pleasing results, and we are sincere when we state that of all the humidifier systems we have investigated, we believe yours gives the best results.

Yours very truly,
(Signed) A. N. SHEPARD & SON,
By G. W. Stewart.

Cigar Manufacturers Hold Interesting Meeting

York, Pa., Sept. 11.—The York County Cigar Manufacturers Association at its meeting yesterday announced that C. S. LaMotte had been awarded the prize of $10 for the best written statement of the merits of the short filler five-cent cigar. Mr. LaMotte is the president of the First National Bank of Red Lion. The committee which picked the winning essay was composed of C. M. Ehehalt, Arthur S. Zeigler and Robert E. Glenn. Mr. LaMotte generously turned the prize money back into the treasury of the county cigar manufacturers' association.

The article prepared by Mr. LaMotte is as follows:

"More than 100 years ago York County, Pennsylvania, began to farm, cure and manufacture tobacco into cigars, developing the industry to a point that has become a science and to such a successful standard that today one-sixth of all the cigars made and smoked in the United States are made in this county.

"Many minor reasons could be advanced as to why this wonderful development, but it is the principal one to which we wish to call your attention.

"Seven-eighths of the millions of cigars made in York County are of cut filler and retailed for five cents. Experience has proven that in the manufacture of cut filler cigars more value is given the purchaser for the reason that the tobacco is shredded and fluffed up, the dirt fanned out of it and cleaned to a polish. Furthermore, three to four different kinds of tobacco are blended together making a high-class smoke equal to and above the average higher-priced cigar in long filler. In other words, it is impossible to manufacture a long filler cigar with the blends to anywhere equal the cut filler for the price.

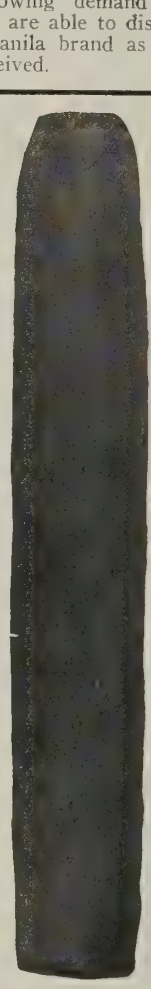
"This letter is addressed to you for the reason that it is the general opinion that the long filler is the better cigar and to correct this mistaken idea we make the above explanation. You need not stretch your imagination to be convinced of the merits herein set forth and if inquired into of practical manufacturers you will find they will substantiate all we have said. A cut filler will repeat itself for the price every time in competition with the long filler cigar."

The association continued the committee on the essay award for the purpose of formulating a letter, which will be placed in the packages of cigars, advertising the short filler five-cent cigar.

It was agreed to call the attention of Congressman S. F. Gladfelter, of the York-Adams county district, at an early date to the fact that the importation of Manila cigars had exceeded the quota by twenty-eight million. The matter was brought up by J. Frank Strayer.

On motion of J. C. Witmer notices will be posted in the factories prohibiting canvassing and soliciting. W. H. Toomey, York, spoke on the credit system.

Vice-president Perry A. Tschopp presided. These members were present: Charles C. Meads, Perry A. Tschopp, Daniel Spangler, Clayton O. Meads, Horace A. Rost, Paul Reichard, Herbert M. Smith, Stewart S. Shindler, William H. Toomey, T. E. Brooks, M. S. Downs, William C. Frutiger, T. E. Miller, Earl Rost, Frank Snyder, Sterling Knisely, Quay Minnich, J. C. Winters, Charles F. Roseman, C. S. LaMotte, John Keller, Allen C. Frey, Stewart F. LaMotte, David E. Wolf, J. Frank Strayer, Harry Wolf, E. B. Strickler, Charles F. Laucks, Charles Tieman, Latimer Sechrist, L. M. Sentz, Roger Snyder, Roy Snyder, and William H. Myers.



Alhambras Gain in Favor

Legal Lore

When You Get a Letter or With a Rubber Stamp Signa

I would have said that I had about every legal subject that co sibly touch the business life of a man, no matter what his line, b comes a New York trade paper w inquiry, on which I have never before:—

Have you in your files an a covering the subject of the "L ity of the Use of the Rubber St —that is, when a rubber stamp nature of a firm or person is sta on the back of a check or any legal document? Perhaps if have not an article exactly this line, you may have one v touches on rubber or steel st from some angle.

To the best of my recollection never written anything on the though it is a live one and of mu portance. The main thing ab signature, or a special form of si not written by the maker's hand, intent. Anything is a signature writer means it to be. I can ma mark, as many persons do, and i is evidence that I intended it to signature and to bind me, it v considered a signature. The wors about taking any paper bearing a stamp signature is that if the q arises you will have to prove that affixed by the man whose signa purports to be, or by somebody w knowledge or consent, and with the that it should constitute his sig This is not always easy.

Many business men use rubber to endorse checks. Usually in such it is easy to prove the existence custom, but in some cases it may so easy. A written signature pro self in a way, because it is individu two persons have the same sig But a rubber stamp, whether it is simile signature or just the printed proves nothing at all. One ma stamp it on paper just as easily other, and you may at any time b fronted with the necessity of provin it was affixed by the right man w right intent.

If you can prove that, the sig will be as good and as binding as a ten one. As a matter of fact, the l upheld printed names, which are ev personal than a name stamped w rubber stamp; also lithographe natures, it being evident in all cases that the signature was use the intent that it should be binding.

I remember one case in whic holder was trying to collect a note was more than six years old, an sequently outlawed. He got arou outlawry by pleading that the ma it had made a new promise, with six years, to pay the note, which so much longer to run. It seems th alleged new promise was in writin was not signed personally by the of the note. It bore a rubber signature, affixed by a stenographe it was shown that the maker ke stamp to save himself work and th stenographer used it regularly. court held that the maker of the no legally signed the new promise. case establishes the legality of a stamp signature pretty thorough think.

But in another case the rubber signature was thrown out. In tha a man had bought some goods. was sent with them, and the stamped it with his name and the d purchase. Later he repudiated the chase and among other grounds sai he hadn't signed any complete men dum of the transaction, as requir the Sales Act. The seller pointed rubber stamped name, but the cour that was not sufficient, as there w evidence that the name was used *signature*. You see, it all centers question of intent. I can use a r stamp of my name for many other poses than as a signature. If I sta on my handkerchief, I don't use it

Odds and Ends Determine the Profits

By MAX MARX

odds and ends to be found in amounts and kinds in almost all stores, determine the profits of ness, and in too many cases de- the losses. The tobacconist must of each lot of merchandise before realize his full profits.

handise should not be kept in stock han six months or nine to twelve at the most. When kept in stock han that it is bordering on a loss store, when the space in the store interest on the money invested sidered. It is necessary for the nist to know exactly how long icle of merchandise has been on lves or in the showcases. One uist did this by having a large ok, in which he recorded the date ch shipment or box of merchan- s received or put on the shelves. shipment would be received be- of the old lot would be sold. As the new shipment arrived, its s entered on the book. Then the nist marked the date of the for- pment on those articles of mer- that were still left from the ot. This was marked with the The month was near enough, so reviated the months as follows: nh, ap, my, je, jy, ag, s, o, n, d." s the last figure in the year to e the year. For instance if the had been placed in stock in June and was priced at 35c., it would ked as follows: "je35c.3." The were instructed to sell the special merchandise before the others. way no odds and ends were cre- carelessness and the tobacconist ell in a glance how old the mer- e was.

sult from Various Causes

and ends are created in many t ways. It may be that the to- st ordered too much of a certain and necessarily had extra on hand. ing careful to protect it from the t wear that comes from ordinary e the tobacconist finds that the rs are dirty and show shelf-wear Rather than have dissatisfied cus- the tobacconist merely sets them nd it is not long before they are as odds and ends. He has set s profits on that merchandise. ay be that one or two defective of this merchandise, not reported tobacconist but yet creating dis- l customers for that article, have ed the sale of the rest of the lot acconist has. The rest of the lot ds and ends.

It may be that in being placed on the shelves a certain article of merchandise, ordinarily rather slow in selling, has been misplaced or set in an out-of-the-way place. It is not long before these become odds and ends for the tobacconist.

Found When House-Cleaning

Many times when the tobacconist cleans house in his store, several articles of merchandise are unearthed. "Where did they come from?" is the first question. "Don't know" or "They were here when I bought the place ten or fifteen years ago," is the common reply. These enter the class of odds and ends.

Possibly the tobacconist has made an unwise purchase, and rather than sell the merchandise at a slight loss to get it off the shelves for better merchandise, he will let it stay on the shelves unsold, making a complete and a larger loss This enters the class of odds and ends.

In some instances the tobacconist purchases a better brand of that certain article of merchandise, thus destroying the sale on the remains of the previous lot of goods. These enter the class of odds and ends.

There are many ways by which the tobacconist acquires his odds and ends, but the biggest question is, "How can he turn them into profits or at least into money?"

One tobacconist will meet this problem by having an "Oddment Sale" or an "Odds and Ends Sale" once each year, in which he will offer the odds and ends at reduced prices. To advertise the sale well, he will throw in some merchandise (that is good and fresh) at a slightly reduced price. He may actually lose on the sale when it comes to figuring the cost of the merchandise sold and the actual selling price, but in reality it is a gain for him. Had he not had the sale, the merchandise would still be on his shelves occupying valuable room and not realizing any money at all for the tobacconist. He expresses it well when he says, "It's just like picking up that much money out of the gutter."

Displaying Odds and Ends

One tobacconist will place a neat table near the front door where everybody will have to pass it. He will not call it such before the public, but it is his odds and ends table. The minute any article of merchandise is in the odds and ends class, he will place it on this table, priced either at its regular price or at a slightly lower figure, and it is not long before the article will be sold for actual money.

One tobacconist will place the odds and ends merchandise in a prominent place in the showcases or on the shelves and place emphasis upon it while talking to the different customers. This usually will move the odds and ends to his cash register.

One tobacconist will move his odds and ends by doing them up into grab-bag packages and selling them in that way.

If the tobacconist will only keep a close and careful watch over his merchandise, there is no reason for many odds and ends to accumulate or at least for them to last very long as odds and ends. Odds and ends, turned to the cash register, will wipe out many a loss and will create a profit or make a larger one.

Bakelite and Radio Exhibit at Chemical Exposition

How the radio is finding a use for many of the rare metals will be shown at the composite radio exhibit at the Chemical Exposition which opens at the Grand Central Palace, New York, on September 17. A number of well-known firms have contributed products of their manufacture which deal directly or indirectly with the construction or operation of the radio. Thorium, tellurium, selenium, tantalum, molybdenum—all metals rarely getting into commerce on a broad scale—will be demonstrated. Thorium of the Lindsay Light Co., used in radio tubes; tellurium and selenium of the Raritan Copper Works; tantalum and molybdenum of the Fansteel Products Co., among others, are to be exhibited.

In addition to the metals, carborundum crystals of the Carborundum Co., synthetic resins of the Bakelite Co., hard rubber radio parts of the Luzerne Rubber Co. and the American Hard Rubber Co., extremely fine precision instruments for electrical work of the Cambridge & Paul Instrument Co., and a number of other important features of the radio constructions will be demonstrated. Alundum tubes for use in measuring high temperatures, particularly in furnaces for drawing tungsten tube wire, will also form part of the exhibit.

Better Boxing and Crating

More than a 50 per cent reduction in the amount of freight claims for loss and damage was made in 1922 compared to 1921. Instead of the $96,700,000 paid out in 1921, only $48,050,000 was paid during 1922. The Forest Products Laboratory of the United States Department of Agriculture gets credit for a share of these savings due to their work in improving methods of boxing and crating. The educational work in introducing the better practices was stimulated by the American Railway Association, which conducts a bulletin service giving causes of losses and how they may be corrected or minimized.

Newspaper Ads That Get the Busines

By Frank H. Williams

A middle western tobacco merchant decided that a little newspaper advertising would be a good thing for his business, provided he could get enough novelty and punch into his advertisements to make the readers sit up and take notice and feel like patronizing his store as the result of reading the ads. So the merchant spent a considerable length of time thinking over various things that he might put into his ads, but without being satisfied with any of the ideas thus evolved. Finally, however, he hit on a good plan and, as the result, ran an advertisement reading like this:

$10 for You If You Write an Ad for the Smith Tobacco Store

"We don't know just what to say about our store that will bring more business to the store. We are tobacco merchants, rather than ad writers. So, we have decided to offer a prize of $10 to the person who writes the best ad for this establishment—not over 200 words in length—and who sends the ad to us by Tuesday of next week.

"Get busy and win this $10.

"Smith Tobacco Store, Main and Martin streets."

How It Worked Out

On the face of it this looked as though it would be a good stunt for the store, as it would be sure to create a lot of comment and thus give the store a lot of word-of-mouth advertising.

But the outcome of the stunt was considerably different from what the proprietor of the store had figured.

As the result of putting in this advertisement about fifteen different ads were submitted, most of these being submitted by regular customers of the store. The proprietor, upon getting this many ads, was delighted and he spent a lot of time and thought in picking out the best ad and in awarding the prize. Then, when the prize was finally awarded and the prize-winning ad was published, the proprietor thought that his business would be helped and his enterprise would be widely commended.

But something entirely different happened. The fourteen ad writers who had submitted ideas in the contest and who had not won the prize, became sore. They charged favoritism. They said the proprietor of the store didn't know a good advertisement when he saw it, and several of the number, after telling the proprietor just what they thought of him, left the store and never returned.

In other words, this method of newspaper advertising proved to be more of a liability for the store than an asset, and it was all due to the fact that the proprietor had failed entirely to discover some method of pacifying the non-prize winners.

The Better Way

How much better was the plan evolved by another middle western tobacco store which also went in for some ne advertising. This store advertis it would pay $1 for each advert written for it by a patron. The to be between 150 and 200 wo length, and in the opening pa was to use words which were n only of the letters appearing in th of the store.

Of course, the preparation of vertisement conforming to these tions called for considerable effo ingenuity on the part of the write cut down the number of people ting ads, and made it possible proprietor of the store to carry announced intention of purchasing each ad that was submitted and p it in the advertising space he ha tracted for in the local papers.

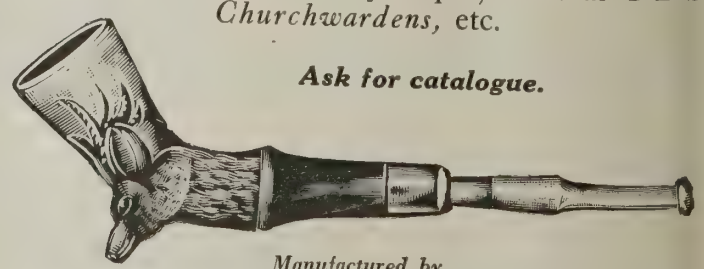
As each ad was printed, it carr name and address of the person w written it. And the result of the thing was that about ten differe were printed by the store each w the regular advertising space, and person whose ad was used was n firm friend of the store, and there no sore spots anywhere as the re the stunt. Also, the proposition w from being too expensive for the st stand.

This stunt created a lot of attent the territory where the store was lo and was, unquestionably, very effec building up business for the est ment.

Method Adaptable to Other Stores

Surely this same sort of a stunt be used with equally good resul other tobacco stores which are lo for new and rather unique ideas t into their newspaper advertising.

And, it is the uniqueness and ne of the copy used by the tobacco st its newspaper advertising which, i last analysis, determines the effecti of the advertising. No one cares to advertisements that are deadly dul uninteresting. No matter how impo the tobacco merchant may think it let the public know that his tobacco of superior quality, the public wil pay much attention to a merely ord dissertation on the quality of the s goods. It takes more punch and snap to get the folks to sit up and notice and immediately act on the a tisement's suggestion that they go t store and purchase the advertised g



Generally, too, the average folks can be expected to patronize the store, dislike hifaluting language a too great insistence on grammatical rectness. What they want is somet that sounds more like the way that themselves and other people talk.

For instance, a high-brow adver ment couched in some such languag the following will hardly make muc an impression or build up much busi for the store:

CLAY PIPES

of every description with Hardrubber and Celluloid Stems, also *Common* Clay Pipes, such as *T D'S, Churchwardens,* etc.

Ask for catalogue.

Manufactured by

American Clay Pipe Works, Inc.

239 4th Ave., New York Factory, Brooklyn, N. Y.

Where Quality Predominates

periority in blend, in manufacture in fragrance are the outstanding cteristics of the cigars and tobaccos by this establishment.

e cater to a discriminating clientele. in and purchase some of our goods scertain for yourself the correctness se assertions."

, if the store puts over an adver- ent reading as follows, it will be sure to get some results from it:

ay, Step Up a Little Closer—

e want to whisper something in alabaster ear, whatever that is. is is just between us and the town —understand? The Smith Tobacco at the corner of This and That is having a heavy run on Oo La igarettes. Yea, the boys sure are g 'em fast. Seems as if all the wise are hep to the fact that these es are the best ever. And, oh, what r price the store's selling 'em at! in the world can they do it? ip around to the store and grab of these smokes before they're gone. s all. A word to the wise is plenty, know."

is sort of an advertisement would l much more to the average man in treet than any high-brow collection rammatical perfection, because the ge man in the street isn't as much rned with grammar in the things he as he is in getting a "punch" out

Sign of Good Fellowship

e fact of the matter is that there is ably no line of retailing where a free easy style in newspaper advertising over so well as with retail tobac- ts. People rather expect dignity in n when advertisements deal with bonds, diamonds, Oriental rugs and hat sort of thing. But the sign of obacco store is the sign of good fel- hip, absence of high-browism and all sort of thing. So the tobacco store h puts up its newspaper advertise- in a language that its present pa- and its prospective patrons can un- tand, is the store that will get the out of such advertising.

fact, to get right down to brass on the proposition of newspaper ad- sing for the tobacco store, the man- in which the ads are put up is much important in getting business in the run than the things that are said in ads, unless there is something really aordinary to say in the way of an- ncing special sales, the opening of a store, the opening of an addition to establishment or something of that

ake *your* newspaper advertising bring lot of new business by following out suggestions contained in this article.

Before and After

certain man who was a tramp sat in shelter of a little cliff that shielded from the chill of autumn winds and in his pockets for a few grains of acco wherewith to fill the bowl of his eputable pipe. Two small stones near hand supported tin cans whose outer faces were black with smoke from the beneath, and in one of the cans there coffee and in the other a savory stew t perfumed all the air. With his pipe ght, the man leaned back against the l of the cliff and smiled in complete tentment.

Tobacco, food, an appetite and liberty," murmured. "What more can mortal ?"

One year later the man passed that way ain, but he was no longer a tramp. had come up in the world and was a spector. A patient burro carried his of tools and his supplies of food. The n made camp in the ice of the cliff and about the business of preparing supper. ere was food in abundance, and the was sweet and warm. Having eaten nerous pouch, folded a blanket and sat on it with his back against the wall of cliff. After a little he moved uneasily his improvised seat.

"What a life!" said he. "I wish to aven I had a decently comfortable air out here."

Another year passed, and now the man od before a nickeled basin in a Pullman r and studied his reflection in the mirror above. With countless thousands of dollars in bank and other thousands daily adding to the total of his wealth, he was traveling in quest of entertainment. For the first time in his life, to employ his own phrase, he was riding the cushions. At present he was shaving, and in a little while would make his way back to the dining car and consume a generous breakfast.

"It's a darned strange thing to me," said the man, as he lathered his chin for the second time, "that these infernal dressing rooms can't be made a little more convenient."—*Baltimore Sun.*

Salient Features of the Chemical Exposition

Name:—Ninth National Exposition of Chemical Industries.

Time:—September 17 to 22, inclusive. Open 12:00 Noon and closes 10:00 P. M. each day.

Place:—Grand Central Palace, New York. Entrance on Lexington Ave. between 46th and 47th Sts.

Products Shown.—Chemicals, chemical equipment, instruments, containers, General industrial machinery, furnaces, tanks, ceramics, technical and industrial books, dyestuffs, metals, valves, evaporators, filter presses, fertilizers, mills, laboratory equipment and supplies, perfume materials, chemical stoneware, lacquers, medicinal products, belting, porcelain ware, industrial opportunities and raw materials for the chemical industry, asbestos, fire prevention devices, educational materials showing progress of American chemical industry, and a thousand others.

Under Conduct of International Exposition Co., Managed by Charles F. Roth and Fred W. Payne. Advisory committee composed of representatives of chemical societies, chemical and equipment manufacturers.

Number of Exhibits—About 400.

Times Previously Held.—Eight. Seven in New York. Once in Chicago. All under present management.

Products Permitted to be Shown.—Of American manufacture only unless by special permission of Advisory Committee in certain cases. Canadian products generally expected and admitted as American.

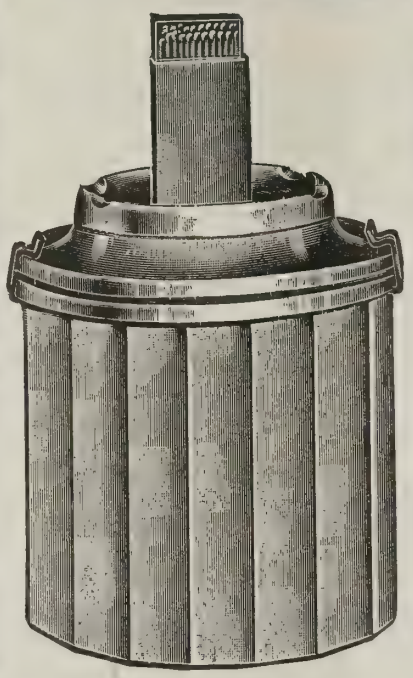
Admission.—By ticket. Tickets distributed through exhibitors without charge. Admission fee at door fifty cents plus tax.

Attendance.—Average about 100,000 for eight years. Highest 127,000 in 1921. Lowest 63,000 in 1915. In 1922, 125,000.

Moving Pictures.—Progress of chemical and general industrial films shown in special auditorium in Grand Central Palace without charge.

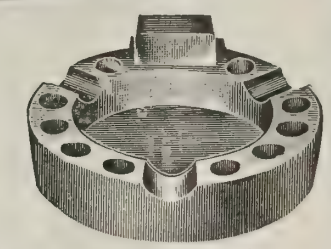
Society Meetings in Conjunction.—American Ceramic Society, September 19, at 2:30 P. M.. in Grand Central Palace; Technical Association of the Pulp and Paper Industry, September 20, at 2:30 P. M. in Grand Central Palace; Salesmen's Association of American Chemical Industry, annual meeting and banquet, 12:30 and 7:00 P. M. September 20, at Hotel Commodore; Technical Photographic and Microscopical Society, September 21, at 2:30 P. M. (members only), at Grand Central Palace.

Students' Course in Chemical Engineering (new feature 1923).—Series of lectures on practical phases of chemical engineering practice and materials in conjunction with demonstrations by equipment and machinery in exhibits. Lectures daily during Exposition in Grand Central Palace by leading authorities in various fields from 10:00 A. M. to 12:00 Noon. Estimated daily attendance of 250. Prof. W. T. Read, Yale University in charge.



Certificates of Merit.—Given by Exposition Management to firms showing products in noteworthy manner. (New features 1923).

Object.—To unite under a single roof the new chemical, chemical equipment and allied products of industrial development of the past year, where they may be seen by the prospective buyer, and where they will be of educational value to the laity and technical minds of other industries.



Next Exposition—To be held in 1925.

Chicago Trade Notes

CHICAGO, Sept. 8.—Tennyson is a new brand of cigars just introduced to the Windy City smokers by the Sanders & Watson Cigar Co., the wholesale house at 158 West Lake street. The Tennyson is packed in tins. It is a Mazer product from the Mazer Cigar Co., of Detroit. Large display ads. are now running in the daily newspapers. A ten-cent size of Tennyson, packed in glass jars, is also being put on the market here by Sanders & Watson.

Joseph Moos, a former north side retailer, is now behind the counter at the Fort Dearborn Hotel stand of H. M. Schermerhorn, Inc.

Jack Rosenberg, of Eduardo Gonzales & Co., Tampa, has left for a tour of the Middle West. His first stop is St. Louis, where he sells all the best dealers.

Jazie's Smoke Shop has opened at 3859 Cottage Grove avenue. A full line of popular brands is carried here.

New Fatima cigarette signs appear on the billboards. The signs show a very attractive picture of a garden scene, showing the diners enjoying the Fatima blend.

Manuel Garcia, of Perfecto Garcia & Bro., Tampa, paid the Chicago office a visit a few days ago.

Pleased with Optimo Sales

Lyman Baum, who spent two weeks here, has returned to the New York office of the Optimo factory. Mr. Baum called on the Chicago trade during his stay, and enjoyed seeing how well Optimo cigars sell here.

Gordon Nussbaum, who covers the middle west for Berriman Bros., is out on a trip booking orders for holiday trade.

Get Good Share of Trade

Kraus & Co., of Baltimore, get some good business out of Chicago. Their In-B-Tween, Say So, La Teresa and Flor de Moss cigars are sold in many stores.

New paper window signs of El Verso cigars are now shown on the windows. Steele-Wedeles Co. reports a heavy demand on the El Verso cigar.

To Ensure Uniformity

"Mother Earth is not dependable," says Sam Paley, of the Congress Cigar Co., to the smoker, in his newspaper ads. He tells them that to produce La Palina cigars always uniform, he keeps on hand three and a half million dollars' worth of tobacco to insure its quality.

A Leading Brand

Robert Burns cigars in all sizes are moving very fast these days. Robert Burns has for years been one of the leading brands here.

Right Up in Front

Johnnie Walker cigarettes are right up in the front. The Falk Tobacco Co.'s sales force have secured a 100 per cent distribution on Johnnie Walker cigarettes.

In Forward Movement

Walter Woolfson, sales manager of Ryan & Raphael Cigar Co., keeps very busy these days. The opening campaign on Personality cigars is now in full swing. Mr. Wolfson is assisting the sales force in the introduction. Other big sellers with this firm are the Lucius from Coral-Wodiska, and Cressida from the Gato Cigar Co.

Keeping Up the Good Work

Sam Meyer, chief aide to Herb Mesick, of Cuesta, Rey & Co., has returned fro Detroit, where he placed Cuesta-R cigars all over the Motor City. He w remain here for some time working t local trade through Ruhstrat-Christi Co., who distribute Cuesta-Rey Chicago.

Extra for Small Packings

It appears that the general increase boxes of 25 cigars for holiday use th years will be $5. Factory men who ha been here the last few days are all char ing $5 extra this year.

Visible Signs

Over the entrance of many of th Schulte doors are neat glass signs fe turing Camel cigarettes, while over th United doors are signs of Wrigley's gun

The local factory of Wenglar & Mar dell is very busy these days, turning ou the well-known Tom Palmer cigar. It i one of the leading clear Havana seller on this market.

Eddie Kirsch has a well-equipped stan at 64 W. Randolph St. He features onl the very best of cigars and has a larg box business, both in Chicago and out of-town cities.

Discontinuing Favorita Size

The General Cigar Co. is discontinu ing the 2-for-25-cent size of Van Dyck now known as Favoritas. The presen stock on hand is being offered to th trade to sell at 10 cents. All future ef forts on Van Dyck will be put on the 2 for-25-cent Banker size.

To Aid Personality Campaign

Doc Rosobro came in after a three months' tour of the east and middle west for the New York Tampa Cigar Co. He will remain here for a time to help the Ryan & Raphael Cigar Co. put over the introductory campaign on Personality cigars.

The Schermerhorn stores display Rey de Rey in the 10-cent triangular shape. made in Tampa by the New York Tampa Cigar Co.

Seidenberg Activities

Wm. J. Seidenberg, head of the Wm. J. Seidenberg Corp., of New York and Tampa, is to spend two weeks here at the Chicago branch, outlining and getting under way a comprehensive Fall campaign on Pancho Arango, Virginia Lee and other Seidenberg cigars, with his general sales manager, Harry L. Harris. The outlook is quite promising. The sales force is being increased and new accounts are being opened. Mrs Charles D. Altschul, for two years with the Hotel Sherman box trade department, has joined Seidenberg forces. Harry Marx, who has a classy cigar store at 302 South Clark street, has added six sizes of Pancho Arango. E. C. Keyes, the well-known Cleveland (O.) dealer, now features Pancho Arango; a recent shipment from the Tampa bonded factory, contained eight sizes. Joannes Bros., large wholesale grocers of Green Bay, Wis., have closed to distribute the S. P. V. Havana wrapped seconds, made by the bonded Tampa Seidenberg factory.—H. L. H.

Better See Chemical Show This Month

The next Chemical Exposition following the one which will be held this year at the Grand Central Palace, New York, during the week of September 17 to 22, inclusive, will be in 1925. This year's exposition offers the last opportunity to see the chemical, equipment and machinery exhibits for a period of two years.

Typical Tobacco Habit "Cure" Exposed

Fake cures for the tobacco habit have filled the pockets of swindlers. Recently a concern was engaged in selling through the mails a cure which, it was claimed, would prove successful whether administered to a person with or without his or her knowledge. Business was solicited through this advertisement:

"Tobacco habit easily cured.

"A New Yorker of wide experience has written a book telling how the tobacco habit may be easily and completely banished in three days with delightful benefit. The author will mail his book free on request.

"The health improves wonderfully after the nicotine poison is out of the system. Calmness, tranquil sleep, clear eyes, normal appetite, good digestion, vigor, strong memory and gain in efficiency are among the many benefits reported. Get rid of that nervous feeling; no more need of pipe, cigar, cigarette, snuff or chewing tobacco to pacify that irritating desire. A genuine opportunity; write for free book; show others this genuine advertisement."

To those who answered this advertisement was mailed a pamphlet entitled "How to speedily and perfectly conquer the tobacco smoking and chewing habits; also the snuff habit," and a mass of other circular matter. This reading material was calculated to induce the reader to believe that he should not rely upon his own will power to stop the habit, but should purchase the treatments. A good deal of space was devoted to the dire results, some of which would frighten the most hardened skeptic. Here are some examples:

"The reason why tobacco will be shut off by law is that it is a race poison. It does untold injury to millions who get into its clutches.

Alarming Pictures Sent

"Tobacco kills off many lads. It kills middle aged men and it kills off many elderly men. So beware!" Pictures were sent, one of which was of a man in the midst of his family suddenly gone insane. This picture was headed. "He was an inveterate cigarette smoker." Another picture showed a deathbed scene under which was imprinted "Why he died forty years too soon."

Post Office inspectors looked into the case. The cure was ordered and turned over to Government chemists for analysis. These experts testified that the representations about the harmful effects directly attributable to the immoderate use of tobacco were false. The experts declared that the claim that "if a comparatively small quantity of tobacco were swallowed by a person there would probably be terrible agony followed by death," was entirely false. The experts pointed out that tobacco is an antiseptic and therefore cannot aid in the spread of germs.

Five dollars was charged for the tobacco cure. In return the purchaser received a package containing several boxes of different colored pills along with a leaflet of directions. These directions emphasize that he "must use no tobacco after he has taken the first tablet." Government chemists testified that the treatment did not stop the craving or desire for tobacco, and unless the patient himself stops the use of tobacco the cure was worthless. Therefore the patient practically "paid $5 to be told to stop using tobacco." The scheme was stopped by a fraud order.—*New York Herald.*

Tobacco Production in South Africa

WASHINGTON, D. C., Sept. 8.—The steady growth of tobacco production in South Africa during the past ten years has directed attention to the possibilities of the Union becoming a factor in the world's markets. The full amount of tobacco which can be consumed within South Africa is now being produced, reports Consul C. J. Pisar, Cape Town.

The area under cultivation in South Africa at the present time is 26,000 acres and a variety of types is grown in the different provinces. In the Transvaal a light and medium tobacco of the Virginia type is produced; in the south-central part of the Cape province a medium to heavy type of Virginia is grown and in Natal a medium dark variety is produced and used in the manufacture of cigars and a cheap grade of pipe tobacco. In the western part of the Cape province Turkish tobacco, such as Dubeck and Soulouk, is grown, although the production of 750,000 pounds does not meet the demand.

The total production of all tobacco grown in South Africa has been as follows: 11,644,000 pounds in 1920; 16,620,000 pounds in 1921 and 13,000,000 pounds in 1922. Frost and fire have done considerable damage to the 1923 crop, which is estimated at 20 per cent below that of last year. The Nyasaland export production amounted to 6,320,808 pounds.

South African manufacturers have been using an increasing quantity of the production in that section and also in Rhodesia and a decreasing amount of American tobacco. In 1916 the raw tobacco consumed consisted of 8,000,000 pounds of South African and 466,020 pounds of imported tobacco. In 1920 there was used 12,500,000 pounds of South African, 1,500,000 pounds of Rhodesian and only 211,307 pounds of imported tobacco. In 1921 there was a slight gain in the raw imported tobacco, the quantity being 217,638 pounds, of which only 91,161 came from the United States. During the same year 2,378,603 pounds of Rhodesian tobacco were brought into South Africa.

In 1920 there were sixty-six tobacco manufacturing plants in the South African Union, employing 2,662 persons. Probably the largest tobacco and cigarette manufacturers are the United Tobacco Co., Ltd., and the Westminster Tobacco Co., which are subsidiaries of the British-American Tobacco Co., of England. There are three co-operative tobacco-growing societies in the Union. The largest is the Rustenberg Farmers' Co-operative Society, which handles between 3,000,000 and 4,000,000 pounds of tobacco annually.

NEW YORK, THURSDAY, SEPTEMBER 13, 1923

THINK WHILE YOU SMOKE

As oil is to machinery, tobacco may be to the human brain. Apparently, if he smokes, a man has less friction in his mental processes. Giving solace, a cigar, pipe or cigarette often serves to cool the temper. Preventing irritation and assisting clarity of thought, smoking causes a man's mind to be calm and more capable. Functioning smoothly, it can be operated at a higher rate of speed. Effort is facilitated. Concentration isn't so difficult and tiresome. The helpfulness of tobacco to men who have lots of thinking to do surely has been, is and will be demonstrated in thousands of ways. In practically every profession, trade, occupation or calling today the most dependable and successful men are smokers.

Smoking aids the thinker to plan special achievements or solve problems of every day life. Since the time of Milton, smoking has been associated with profound thinking. The men who thought out and developed many useful inventions, in the past two centuries, were smokers.

If men who smoked had not thought to bring into existence and use a multiplicity of new methods, devices and improvements, possibly the swiftest if not the only forms of transportation and distant communication at present would be represented by oars, sails, animals and human heels.

How much would our boasted civilization amount to now, if what was discovered, originated, brought out, bettered, applied and achieved by smokers should be subtracted in entirety?

The Franklin press, the lightning rod, the submarine, the postage stamp, the cotton gin, the steamboat, the developed locomotive, photography, the telegraph, the sewing machine, the monkey wrench, anaesthetics, the reaper, stenography, the speculum, vulcanized rubber, sugar refining, the alarm clock, the revolver, the cylinder printing press, the threshing machine, nitro-glycerine, drilling for oil, iron hulls for vessels, multiple looms, the screw propeller, kerosene, the breech loading rifle, the typewriter, gasoline, the machine gun, the oceanic cable, the Pullman coach, the Bessemer steel process, the air brake, the telephone, oil pipe lines, the steel rail, electric lights, dynamos, structural steel, the elevator, half-tone engraving, application of electrical power, the trolley car, wire fencing, the bicycle, ball bearings, the linotype, pneumatic tires, shoe-making machinery, the adding machine, the cash register, the turbine engine, the open hearth steel process, time locks, the Ferris wheel, the Eiffel tower, the dictaphone, the phonograph, the range finder, the motor boat, the automobile, aluminum ware, utilization of electric heat, reinforced concrete, automatic firearms, the block system, X-rays, wireless telegraphy, the aeroplane, vacuum cleaners, tungsten filaments, caterpillar tractors, vanadium steel, T N T, gas masks and radio telephony are a few of the outstanding discoveries, inventions, originations and developments of men who smoked and thought of what they wanted to produce or do.

Edison, Steinmetz and Marconi, the three wizards in the utilization of electricity, are tireless consumers of cigars. They smoked, almost incessantly, when they sought the answer to perplexing questions. Formed amid clouds of tobacco smoke, their intense thoughts went forth to enlighten and electrify the world.

One physicist may be engaged in dissecting an infinitesimal peculiarity of an atom, another may concentrate his attention on a distant star so stupendous that its approximate diameter in miles must be given in figures incomprehensible to the average person, yet neither the minuteness nor the immensity of what they are studying determinedly will prevent these scientists from being devotees of tobacco. Absorbed in labor or deep in speculation, they may forget to eat at meal times. But each will fill a faithful old pipe or light a fresh cigar rather frequently. Though they are racking their brains in making intricate calculations, though they are deaf to outside suggestions, they are urged, subconsciously perhaps, to smoke continually. One effect of tobacco is to counteract weariness. So a thinker may smoke and remain at work longer and more satisfactorily.

Pasteur, Lister, Koch, Finlay, Gorgas, Agramonte, Reed and Heiser are cognomens of famous smokers, names of gallant soldiers in wars against disease, doctors who made wider the gates of medical knowledge, benefactors who obtained for humanity many pounds of prevention where formerly there wasn't an ounce of cure. These men, conspicuous for achievements in the domain of medicine, confronted death again and again while they thought to discover the causes, sources and processes of infection. They established new truths. They investigated and isolated dangerous germs. They identified and labeled destructive microbes. They showed how plagues are spread. They indicated how a pestilence could be prevented. Because of the studious endeavors of devoted doctors who were addicted to tobacco, millions of people are more healthy and safe today. Yellow fever, the erstwhile scourge of the tropics, has ceased to threaten countries and regions that have been taught how to obtain protection.

Most doctors smoke but not entirely because smoking is just a habit. How tobacco can confer aid and benefit is well known to those who are best informed concerning the body and mind of man.

To achieve success and remain successful, financiers have to think quickly and clearly. As a matter of fact, hundreds of our prominent monied men are smokers. Usually, when a banker is called upon to make a weighty decision, his first act will be to light a cigar.

The captains of industry, the prime movers of vast enterprises, generally are cognizant of assistance obtainable from tobacco in hours of stress and strain. The big railroad builders and operators such as Vanderbilt, Drew, "Tom" Scott, G. M. Dodge, Stanford, Huntington, Gould, Adams, Garrett, Jim Hill, Van Horne, Shaughnessy, Cassatt, Fish, Ripley, Flagler, Plant, Spencer, Villard, Harriman, Rogers, Brown, Shonts, Underwood, Willard and Earling could have given testimony relative to the value and virtue of tobacco. "Cigars good enough for a railroad president to smoke," was high praise for any brand in the old days.

Philosophers warmly recommended tobacco. Spenser, Darwin, Huxley, Wallace, Emerson, Carlyle, Schopenhauer, Walt Whitman and Thoreau beyond question were profound thinkers. And each made an oft filled pipe his constant companion. Einstein, whose theory is so deep that only twelve men in the world can get to the bottom of it, like other philosophers, must confess that he is fondly attached to a pipe. developed his theory while smoking.

Whether one quotes Conan Doyle or Kipl it can be inferred that tobacco is a necessity men who write the great books.

While he was at work on his "incompar statue" of The Thinker, Rodin, the sculptor, a pipe in his mouth.

By a supposed authority it has been intima that no man ever committed a crime while sm ing a pipe.

And there is monumental evidence to pr that men, by taking thought while smoking, h laid a foundation for great and enduring g not only for themselves but for their fellow as well.

Searching history for two centuries back, tractors of tobacco will have a hard time in tempting to prove that smoking diminishes impedes thinking.

"CLEAN UP" TIMELY STEP IN FIGHTING TOBACCO FLEA

The tobacco "flea," or flea beetle, which fests the cigar-wrapper district of north Florida and southern Georgia, feeds upon tobacco plants and makes small punctures in leaves which detract greatly from the value wrapper tobacco. The damage caused by pest varies in different seasons, but in 19 when the flea beetle infestation in certain tions was unusually severe, the average dam sustained by the tobacco crop in one county estimated by the United States Department Agriculture at $250 per acre, or approxima 15 per cent of its value.

Owing to the small size and the activity this insect, the large number of individuals, its resistance to poisons and parasites, it i difficult pest to control. However, as the beetle goes through the Winter in its adult fo Wintering in protected places in and aro tobacco fields, a general clean-up during the Fall and Winter will destroy many of them materially lessen the danger from the pest r year. Workers in the Department of Agri ture who have studied the habits of the have taken beetles in piles of dead leaves, we pine needles, and practically everything wh would afford protection in cold weather. Wh a tobacco shade is bordered by ditch banks, fe rows, and the like, the department advises bu ing as wide a strip as possible around the fi Care should be taken to select a cold day w the beetles are inactive, and when there is eno wind to cause a good, sweeping fire.

The most important control measure at present time is the clean-up work, but ot measures will be found effective as the sea comes around. Locate plant beds at some tance from tobacco fields and protect them fr the beetles; practice frequent and thoro cultivation of the tobacco crop; destroy weed and around the fields; and destroy tobacco st immediately after harvesting the crop. In Spring, if tobacco is attacked in the fields over-wintered beetles, control as quickly as p sible by frequent applications of poison. Li applications of Paris green give best results, department has found, and may also be usec check the heavier infestations by later broods

A COME-ON

The head of a large tobacco company i skilful advertiser and evidently believes in value of first impressions. A newspaper m who occasionally has to call on him relates t he is always offered a cigar. He says. bears the brand of a well-known ten-cent br sold by the company, but it is always a mig fine smoke. I liked the cigars so much that o I bought a box. But the contents turned out be just plain ten centers."

The gift cigars, apparently, were "come-or —*Wall Street Journal.*

orld's Tobacco Comes From (Pinar del Rio Prov.) Western Cuba

The "Weed Divine" Soothes the Nerves of Men of Affairs the World Over — All Kinds of Growers Produce the Widely Sought Leaf — Profits in Growing Tobacco Are Proportionate to the Care Expended in Its Cultivation—Facts Tersely Told.

By ALVIN FOX, B. Sc.Phd.
Agricultural Botanist, in The Cuba Review

INAR DEL RIO tobacco soothes the nerves of men of affairs the world over. There are all kinds of tobacco-growers, from the rich "veguero" with scores of acres of the finest Vuelta Abajo wrapper, grown under cheese-, to the poor thatched-hut dweller, with his patch that produces nothing but cheap

ofits in growing tobacco are proportionate e care expended in its cultivation. The denizen of the low country may get $50 f his acre, while the rich "Vega" of the g upland region may bring its owner 0 an acre.

e finest tobacco lands in Pinar del Rio are e south side of the range of mountains that d through the province from east to west, ay between the Gulf of Mexico and the bean Sea, in a well-watered, rolling coun- full of natural beauty and possessed of a te as mild and sweet as the fragrance of the whose raw material grows there. The soil ocolate-colored, from two to ten feet, and ts peculiar qualities from the volcanoes that were active there.

growing Vuelta Abajo tobacco, seed is from the first growth of strong and sturdy s and placed in pots of virgin soil near the . When the seedlings reach a proper state evelopment, they are transplanted in the . Fertilizer is selected by chemical analysis th the soil and the tobacco whose flavor it sired to reproduce. A mulch of from two ree inches of partly decomposed hay is put the ground to keep down the weeds and to de vegetable matter as plant food.

cutting the tobacco great care is taken that ll have reached the proper degree of ripe- Green tobacco produces harsh, acrid e; that which is over-ripe does not work up in making the cigars; that which the sun " has cooked to a turn" produces a mild, smooth, cool and fragrant smoke.

In curing, the leaves are suspended on poles which are put in racks, first in the sun and then in the curing barns. In the latter they hang for several weeks, their color changing from the green of the growing plant to the brown of the finished cigar.

When this stage of the curing process is completed, the leaves are put into heaps and left to "sweat" for several days. After that they are placed in bales of about 100 pounds each and shipped to the storage warehouse. There they ferment and undergo a further curing. This process continues from one to two years, according to the grade of the leaves, before they are regarded as fit to be rolled into cigars.

From storage the tobacco goes to the cigar factory. Here the bales are opened up and sprayed with clear water and allowed to stand until each leaf becomes moist and pliable. After

Stringing Choice Wrapper Leaves on Pole to Go into Curing Shed

Growing Tobacco Under Cheesecloth

Examining Choice Tobacco Leaves

this the leaves intended for fillers are placed in hogsheads for further curing, which requires from two to six weeks, depending on the grade of the tobacco.

The wrapper leaves are selected with great care. The cheese-cloth under which they were grown kept out insect enemies and protected them from heavy rains. Any leaf that has a hole through it is retired to the humbler rank of filler material.

The cigar-makers are employed on piece-work basis, getting an agreed sum for every hundred cigars made. Each man is given an allotment of tobacco sufficient to make a given number of finished "smokes." Hundreds of these workmen occupy a single room.

Money in Circulation in Cuba

A recent report from the United States Commercial Commissioner at Habana deals with this subject as follows:

Cuban Treasury Department officials estimate United States gold coin in Cuba at $2,000,000 to $2,500,000, and United States paper money at more than $100,000,000. The amount of American silver in the form of dollars in the island is considered negligible, while American fractional silver is reported to be in circulation to the extent of approximately $100,000.

Recently there has been some discussion as to whether nickel coins in circulation in Cuba are in excess of the requirements of business. These coins are in great part Cuban. In 1919, $300,000 in 10-cent pieces and $200,000 in 5-cent pieces were imported from the United States, and in the latter part of 1920 another importation of 5-cent pieces amounting to $150,0 made. At the present time it is conside Treasury officials that $300,000 is a hig mate for the amount of United States nicl bronze coins in Cuba.

At the date of the latest coinage of money (1921) the total amount of Cuban pieces, including 5-cent, 2-cent, and 1-cent which had been coined was $1,449,560. reports show that of this amount $570, held in the Treasury and in the banks. leaves a remainder of $879,369 as the amo Cuban nickel coins in circulation. If to added the estimated amount of American and bronze pieces in Cuban circulation, of $1,179,396 is arrived at, which is cons by Treasury officials to be a satisfactory es of the quantity of this class of coins r actual circulation in Cuba. It is maintain this sum, which is at the rate of $0.41 per is not in excess of Cuban needs.

Over-Supply of Small Coins in Hat

However, owing to difficulty in se proper distribution of small coins, report been made of a surplus of this class of r especially in the city of Habana. The Ur Tobacco Manufacturers has appealed t Treasury Department for permission t change the nickel small coins, which are re in large quantities by the cigar stands, f Government stamps required in the sale of and cigarettes. The Treasury Departm

Cuban Tobacco Vega in Pinar del Rio

Picking Tobacco Leaves

reply maintains that there is no surplus of coins requiring special action.

From the interior of the island request come for increased supplies of fractional to meet the demand of the laborers in the harvesting. As the Government has no a priation for transporting coins to the inte meet local demands, it has not been able to ply with requests to make monthly shipme small coins to sugar mills. Until recent supply of fractional coins in the interio tended to flow steadily to Habana becau administrative methods whereby remittan sums received by the Government for taxes toms, etc., were made by shipping to Haba actual money received by local collectors. flow of small coins to Habana has been ch by a decree dated February 16, 1923, by of which Governmental collections may b posited in local branches of the Habana and remittances made by means of drafts.

The Cuban Treasurer-General has issu statement suggesting that American frac money be segregated with a view to arra for its exchange for other money with the U States Treasury. He favors the prohibiti the importation of American silver, nick bronze coins by persons entering Cuba in e of $5 for each person. In order to force th of Cuban silver, he advocates prohibiting th portation of American $1 bills.

The Cigarette Barometer

ıong the many barometers of good and bad not the least important is the consumption garettes. And in regard to present pros- the verdict of that barometer is very em- . During July taxes were paid on 5,839,- 47 cigarettes, an increase over July of last of almost 600,000,000.

eph S. McCoy, Government actuary, whose to figure out the probable yield of taxes year to year, has asserted that the monthly tte consumption is one of his principal s. As a check on this he uses the sale of tte papers. When people are flush, he they buy and smoke more cigarettes; when hard times they cut down the purchase of made cigarettes. An increase in the sale arette papers combined with a falling off sale of cigarettes, therefore, would be a ıger of the arrival of tightening times. s are not so good an indicator. Smokers ise them presumably do their economizing ın the grander luxuries.

arette consumption as a business barom- ıowever, has the disadvantage of increasing lume year by year, almost regardless of ss conditions. The only important excep- ɔ this steady increase in recent years was when cigarette sales fell below those in 1919 or 1918. But though 1921 by al- any other measurement was a worse busi- ear than 1920, in it cigarette sales in- d substantially compared with 1920.

rate of increase in consumption has been shing. In 1913 the monthly average sales arettes sales was 1,296,308,000. In 1914 915 there were slight increases; in 1916 the ly average sales jumped to 2,107,525,000, 7 to 2,944,272,000, in 1918 to 3,888,075,- n 1919 to 4,426,649,000, and in 1922 to 752,000. So far in the present year month- sumption has run well over 5.000,000,000. letermining from cigarette sales, therefore, er times are better or worse than "normal" it is first necessary to discount the usual increase in cigarette consumption from year to year. In the language of the economists, it is necessary first to determine the "secular trend" of cigarette sales and then find how the sales in each year or month vary from that trend.

While cigarette sales have been increasing enormously in the last twenty years, and more particularly in the last ten years, the consumption of cigars, pipe tobacco and chewing tobacco has been relatively stationary. Persons who have imagined that the cigarette has merely displaced other forms of tobacco will be astonished to learn that even in the consumption of chewing tobacco there has been no sharp falling off in the last twenty years.

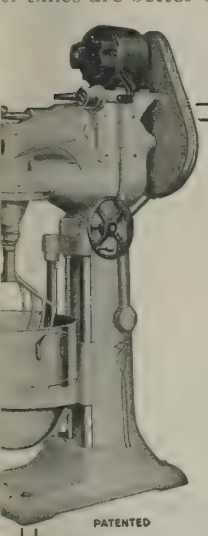
A number of factors account for the tremendous growth in cigarette smoking: the distribution of cigarettes to the soldiers during the war, the vast increase in cigarette advertising, the rapid increase of the habit among women and the ability of the cigarette to fit itself into odd and hurried moments, as compared with the more leisurely cigar. At the present rate of consumption two cigarettes are smoked every day for every man, woman and child in the United States, or six cigarettes a day for every man of voting age.—*New York Herald.*

Enthusiasm

Professor Martin Hartman of Leipsic, Germany, took too ludicrous a view of tobacco smoking to give his argument much weight when the anti-alcoholic congress, meeting recently in Copenhagen, transmitted its findings to anti-tobacco organizations in this country. The professor blandly states that Lord Carnavon, who died of an illness contracted in the Valley of the Kings, would have lived had he not been a tobacco smoker.

No one has yet come out and contended that tobacco smoking is a general tonic for the system, yet the professor's statement is so far reaching that it occasions nothing but mirth. Had he said Carnavon's life might have been extended had he abstained from the use of nicotine his statement might have carried weight. But as it was reported, it was just as far fetched as if some tobacco advocate were to assert that nicotine is an instrument of longevity. Enthusiasm is a great thing but when carried to excess it becomes foolish.—*Michigan City (Ind.) News.*

On Making Mistakes



We made a mistake in last week's issue of the *Sentinel.* A good subscriber told us about it. The same day there was a letter in our post-office box that didn't belong to us. We called for 8 over the telephone and got 198. We asked for a spool of No. 50 thread and when we got home it was No. 60. The train was reported thirty minutes late. We arrived at the depot twenty minutes after the train was gone. We got our milk bill and there was a mistake of 10 cents in our favor. We felt sick and the doctor said we were eating too much meat. We hadn't tasted meat for two months. The garage man said the jitney was missing because it needed a new timer. We cleaned a spark plug and it runs fine ever since. Yes, we made a mistake in last week's issue of the paper.—*Glen Elder (Kans.) Sentinel.*

Times Do Change

President Coolidge's fourteen-year-old son is working on a tobacco farm for $3.50 a day, which is probably more than his father ever received for a week's work as a farm hand.—*Urbana (O.) Democrat.*

Something for Your Old Dudeen

Tobacco crop is good in some sections, so you can put that in your pipe and smoke it.—*Mattoon (Ill.) Courier-Gazette.*

Some Tobacco Industry Developments

Recent activity in the tobacco group which resulted in the last few days in a sharp jump in P. Lorillard and advance of Philip Morris to a new high on the movement is construed to mean that plans affecting the tobacco industry, which have been under discussion for some months, are taking more definite shape. It is not likely that any announcement of importance will be made in the immediate future, but it seems certain the stage has been reached where the formation of new concerns through the consolidation of old ones is much more of a probability than a mere possibility. These changes possibly will involve not only domestic companies, but some of the more important ones abroad.—*Wall Street Journal.*

United's Increased Dividend

Decision of United Cigar Stores Co. of America directors to increase dividend rate on junior shares to $3 quarterly, compared with previous distribution of $2 quarterly, was prompted by improved earning outlook.

It is expected in the current year net will exceed by $1,000,000 that of 1922 when balance after taxes was $4,359,000, equivalent after preferred dividends to $12.30 a share on the 328,653 common shares. This would mean that in the neighborhood of $15 will be earned on the common shares in 1923.

Though prices on many articles are 25 per cent below peak of 1920 unit, volume of turnover shows substantial increases. On one of its leading brands of cigarettes sales in units are running 50 per cent ahead of a year ago.

United Cigar Stores is developing its business in the so-called by-products. Candy sales are running 20 per cent ahead of 1922, while toilet articles sales tripled within a year.

Expansion plans are going steadily forward. Fifteen important locations for stores have been obtained recently in the west and on the coast.—*Wall Street Journal.*

NEW YORK, 44 Whitehall Street—The American Bluefriesveem, Inc.

BASLE, 104 Voltastrasse — Blaufriesveem Limited, late Hediger & Co., Basle.

Manila Exports

Philippine cigar exports for the second quarter of this year were little over 50 per cent of those for the first quarter. Large stocks on hand depressed prices, but an improvement is expected as stocks are gradually exhausted. Leaf tobacco has been firm in price, the bulk of exports going to Europe, says a Manila letter to the *Wall Street Journal.* The larger cigar factories are pleading with the unions to raise the wage scale in the smaller establishments to the level of those prevailing in the larger shops, and this may lead to walkouts in the near future.

Willing in Keystone State

James Willing, of the American Malaya Trading Co., who makes his headquarters at Montreal, spent the early part of the week at his New York office, 136 Water street, and thence proceeded to Pennsylvania to look up his clients in that territory.

Havana Tobacco Market Continues Quite Acti

Remedios and Vuelta Abajo Arriving in Large Quantitie Partly Sold Already and Partly To Be Sold—So America Reported Buying for Future Shipment.

HAVANA, Cuba, Sept. 6.—During the past week our market was quite active. The tobaccos from Remedios and Vuelta Abajo continue arriving in large quantities, partly sold already and partly to be sold. Also the quantities shipped increased a good deal. There are rumors that large quantities of Remedios upper grades were sold to South America for future shipment—that is, as soon as the tobacco is well cured and ready to be shipped. Some houses have already sewed up large quantities, and are just waiting for shipping instructions.

Packing Still Going On

In the country buying in bales continues and prices are rather firm. There are many packings still going on in the Remedios section. Also in Vuelta Abajo very large sales were made, in the country as well as in the City of Havana. The "trust" and Mark A. Pollack have bought some of the finest packings in the country, and also in Havana large quantities of *low* grades were sold to cigarette factories, especially to Trinidad Hermanos, who bought seven thousand bales for their factory. The main sellers were Ml. A. Suarez, Manuel Abella, Cano y Hermano, Antonio Gonzalez, et als.

Gerald Smith has secured for stripping purposes large lots of good 3rd Capaduras and unassorted Remedios tobaccos. Kaffenburgh & Son also added large quantities to their stock for the same purpose.

American Buyers in Market

Of foreign buyers new arrivals respectively can be mentioned, Corral, Wodiska & Co., Tampa, and R. Sic of B. Rosenbluth, New York.

Leslie Pantin & Son are receiving c large quantities of tobacco, being pl in their several "depositos," especiall the large storage rooms of the Upn factory, which this firm rented for season.

Stripping Plants Busy

Most of the stripping plants are w ing with full force, having enough bacco to keep them busy for sev months to come.

The well-known Caibarien firm Lopez & Ca. has sold practically ev thing except a few lots. Don Ern Mier, the head of the firm, liked quality of the tobacco all right, but not agree entirely with the high cos the tobacco, and for this reason was sa fied to sell right at the beginning wit small profit, in this way pleasing numerous clients.

Increased Trucking Rates

Owing to the shorter crop of toba the truckmen in Havana, who have t far charged 12 cents per bale, and cents per barrel for cartage, have as for a raise; that is, 16 and 18 cents, spectively. After a meeting held by Association of Tobacco Dealers, b parties came to an understanding, m ing the new rate 14 and 17 cents. T shows again, that our tobacco deal more than any other trade in Cuba, p tects the laborers, who really deserve Without exaggeration, our tobacco tr can be proud of the good and quick se ice of our truckmen and of the good ganization hardly to be found in any ot tropical country.—GALLO.

Uniform Cost Accounting Methods

WASHINGTON, D. C., Sept. 10.—A pamphlet dealing with the acceptance and installation of uniform methods of cost accounting by the members of a trade association has just been issued by the Fabricated Production Department of the Chamber of Commerce of the United States. The pamphlet is designed to "be of assistance to the officers and members of those trade associations which have undertaken to secure the numerous and important advantages of such uniform methods."

Most Effective Means

The discussion starts with the premise that the technical methods or systems have been devised and that having gone thus far a new problem presents itself, namely, the problem of finding the most effective means of securing the installation of the uniform cost methods.

The pamphlet is divided into two distinct but co-ordinate parts, as follows: "The Association's Problems"; "The Member's Problems."

The first part is devoted to the ways and means by which the trade association's service to its members may be made the most effective. It deals with such matters as the organization of an association cost bureau and cost councils, and provisions for keeping the memb informed of developments generally.

The second part is designed to be direct and substantial value to the pr dent, the general manager, the audi and other executive heads of the vari member companies. It suggests some the preliminary steps that may well taken in order to make sure that association's uniform cost account methods are put into use most effective

Tobacco Survey Making Goo Progress

WASHINGTON, D. C., Sept. 12.—T survey which the Tobacco Section of Department of Commerce is making connection with the tobacco situat both at home and abroad, is progressi satisfactorily, according to T. L. Hugh chief of the section.

It is understood that very few sugg tions were received from the trade Mr. Hughes to the questionnaire wh he is sending to foreign agents. So weeks ago Mr. Hughes sent the pr posed questionnaire to the trade a asked if they had any particular sugg tions to make. A few were received b it was generally believed that the qu tionnaire was so comprehensive that th was no need for additional informati —LAMM.

New Orleans News

EW ORLEANS, La., Sept. 8.—The busi- of the New South Cigar & Tobacco has grown to such dimensions that have found themselves compelled to up their present quarters in Girod et, where further expansion of a factory character could not be made ccount of prior leases. They have n over the large establishment to be quished in a few days by the C. C. er people, and will move into their quarters about October 1. This is ur-story brick structure, at 605-607 nne street, where they will have am- space to accommodate their business les being a more centrally located The company has taken hold of the ibution of the Lawrence Barrett, by D. Emil Klein Co., Inc., New , and Charles Denby, a product of Fendrich factory at Evansville, Ind. S. DeBen, vice-president of the cent Cigar & Tobacco Co., the dean gar and tobacco jobbers in this ter- y, has left for New York and the for two weeks' recreation and rest. Joseph Newman and George Walsh, he P. Lorillard Co., representing iel and New Currency brands in favor with the cigar consuming pub- f New Orleans, were callers on the cent Cigar & Tobacco Co. the newly distributors.

Back from Europe

an M. Gonzales, Camp street manu- rer of La Coya and El Mismo, pure na fillers, has returned to New Or- with his family from a European undertaken last May. Spain, his e state, was covered by auto, for purpose he took along his car, after Mr. Gonzales and wife, with their daughters, journeyed through Eng- France and Switzerland, reaching York September 3 from Havre on *avoie*.

orge Mayer, of Phil D. Mayer & who was stricken with illness while tendance at the T. M. A. conven- in Washington, D. C., is to return October 15, having sufficiently re- ed from his illness to undergo the ie of the journey. Mr. Mayer is ted to be very much better and is recuperating at a New Jersey sea- esort.

J. Kurzweg, secretary and treasurer Consolidated Co., Inc., of Plaque- La., left during the week on an ded business trip to St. Louis, Phila- ia and New York.

Holiday Packages

eral of the New Orleans cigar fac- are now putting up Christmas ges for which they have already ed orders. As a rule, cigars of that eing intended for gifts, in most in- s, are of the better kind in work- ip and quality and packed away in ome containers. Among those en- in this work for Yuletide at present e mentioned Manuel Trelles & Co., & Babin, A. Falk & Son, Gonzalez es special packages *de luxe* for distributors, the Crescent Cigar & co Co., Havanola Cigar Co., Inc., acturers of Hav-A-Real Havana Phil D. Mayer & Son, who were in former times to put up Christmas ges, have abandoned the practice. are so busily engaged on El Cubo, nain seller, that, for the time being, absorbing all their attention.

Leo Taussig, representing Taussig Bros., leaf tobacco dealers of Chicago, is in the city now.

Slogan on Trucks

Trelles & Co. have had the Tobacco Merchants' Association slogan, "After all nothing satisfies like a good cigar," painted on all of their delivery trucks, city and suburban.

N. B. Tuero is opening a lot of satisfactory accounts in the Louisiana parishes and along the Gulf Coast for the products of his factory.

Ferd. Falk, of A. Falk & Son, now on a business tour of Georgia, Florida and Alabama, is turning in very satisfactory reports to the factory. The firm contemplates moving into their new building at Bienville and Decatur streets, about the middle of the month. They have practically made a new building of their recent purchase, but extensive alterations and innovations of the interior of the structure have yet to be made, which, when finished, will provide them with the most modern factory in this city. They will have 25,000 square feet of floor space, two of the four floors of the buildings to be devoted to the storage of leaf tobacco, and two to the manufacture of cigars.

The sympathy of a host of friends is being extended Manasse Karger, secretary and treasurer of the Peoples' Tobacco Co., who has just lost his father, Samuel Karger, aged 75 years. Mr. Karger was a member of the Elks, the Knights of Khorassan and the Knights of Pythias, delegations from which associations followed the remains to the grave.

"Keep Moving"

A cigar bearing the catchy title of "Keep Moving" is a new brand being handled by Max L. Block, the energetic Houston, Tex., representative of M. Trelles & Co. It is a five-cent seller and reports credit it with being some cigar. Mr. Block has just returned from a business trip to San Antonio, in the interest of the New Orleans factory. He opened a number of new accounts. The J. H. Williams Tobacco Co., a prominent distributor at 314 North Flores street, was included among the number. The products of the Trelles factory are meeting with a ready sale in the Lone Stare State, Mr. Block reports.

At the entrance to the Prince Theatre, in Houston, Texas, a much frequented place of amusement, Miss S. E. Dozie holds sway over a very attractive cigar and tobacco stand, which she has just established.

The Court House Pharmacy, large retailers of cigars and tobacco in Houston, Texas, have added another store at Comfort and McKinney avenues to their chain of stores in the Bayou City. This is their third unit. Charles Fontana, an experienced man in the business, is manager of the cigar departments of all three of the Court House drug stores.

C. T. Smith has opened a cigar stand in the Prince Building, Houston, Texas, and reports a satisfactory measure of the trade. He is an experienced cigar salesman.

Jesse Falk, wholesale leaf tobacco merchant of Chicago, who has relatives in New Orleans prominently identified with the cigar industry, was a recent visitor here. He called upon A. Falk & Son during his stay. Mr. Falk visited his local distributors, Falk & Babin, in Caromdelet Walk, which was the prime motive for coming here. He returned to Chicago upon completion of his mission. Falk & Babin, finding their present quarters inadequate for their business, have

practically concluded negotiations which will put their establishment in a more central part of the city, beginning October 1. They are now making arrangements to move. They report very satisfactory increase in business.

Charles A. Dreux, of Valloft & Dreux, returning from a trip to western Lousiana and eastern Texas, announces that he has taken on additional territory at Beaumont, Port Arthur and Orange, Texas, for Ruy Lopez. Ralph Faulkner, representing the factory, accompanied him.

Peter Guth, a city salesman of the C. C. Snider Cigar & Tobacco Co., which has gone into liquidation, so far as affects this territory, has aligned himself with the corps of salesmen of Valloft & Dreux, and is said to be doing very creditable work.

The Pasbach-Voice Lithographing Co., Inc., of Brooklyn, has opened offices at 2125 Calliope street, this city, with W. J. Geary in charge.

A representative of the Lloyd Leaf Tobacco Co., of Ocala, Fla., was in the city recently looking up a location for a future branch headquarters here where the firm contemplates opening offices. He made a survey of the trade and appeared satisfied with what he discovered in the way of prospective business.

Miller & Kern, of Shreveport, have been made distributors of the Muriel and New Current brands of cigars, heretofore handled by the C. C. Snider people.

The Harrison Bros. Cigar Co., of Shreveport, has been appointed distributor for the Hava-Tampa brand of cigars, and the Modlin Cook Co., Inc., jobber for the Bayuk brands.

U. S. Court Rules Agains Cash Register Co.

A decision in favor of Remingt Arms Co., Inc., has just been handed do by Judge Hugh M. Morris of the Uni States District Court at Wilmingt Del., in the patent infringement suit the National Cash Register Co. of D ton, Ohio, against the Remington Co.

This suit was filed by the National C immediately after the Remington ca register was placed on the market ab two years ago, and alleged infringem by the sale of that machine of three p ents owned by the National Co. In t present decision the Court found two the patents invalid and the third not fringed.

This is the third decision which h been handed down in this case. The fi decision was by Judge Morris, deny the plaintiff's motion for a prelimina injunction, on July 29, 1922. The seco was the decision of the United Sta Circuit Court of Appeals at Philadelph confirming the first decision of Jud Morris.

The suit came on for trial as a wh in Wilmington, Del., during May of t year—the trial consuming an entire we Final arguments were heard by Jud Morris, July 9, 1923.

This decision is of considerable int est in that it clears up any possible m understanding of the relative merit of t claims of the two respective compani

Tampa Tidings

TAMPA, Fla., Sept. 8.—Harry Rinaldo has connected with the Tampa Cigar Co.'s sales force and will cover the Pacific Coast.

G. W. Shaw, United States bonded warehouse store keeper, at the V. Guerra, Diaz & Co. factory, has been promoted to the "Booze" squad of the customs service. He is succeeded at V. Guerra, Diaz & Co. by C. B. Holly.

Louis Canton is visiting Tampa en route to New York from Havana.

Ed. Berriman has returned from the tobacco fields of Cuba.

Celestino Lopez of Arguelles, Lopez & Bros., arrived today from New York. He is optimistic regarding the coming season's business.

The cigarmakers have made a demand on the manufacturers for restoration of the 1918 "Cartabon," which means an increase of about 20 per cent on cost of labor.

Isidoro Randazzo Dies

Isidoro Randazzo, aged 48 years, died Sunday night at his residence, No. 1034 Ninth avenue. Funeral services will be conducted at the Sacred Heart Church Monday afternoon at 4 o'clock. Interment will take place at the St. Louis Catholic Cemetery under the direction of Primo Lord, mortician. The deceased has been a resident of Tampa for 30 years, and for a number of years had been foreman of the Salvador Rodriguez cigar factory. Besides his wife he is survived by three sons, Pablo, Adolfo and Alfonso Randazzo; two daughters, Mrs. Prudencio Caval and Miss Carmola Randazzo, and one brother, Filipo Randazzo.

Key West Key Notes

Mi Favorita Factory Closed

KEY WEST, Fla., Sept. 8.—Interest this week centers about the closing of Mi Favorita cigar factory. It came as a surprise that this factory would be closed, as when the factory was taken over by purchase from Park & Tilford by the Shulte Cigar Stores Co. it was thought that the production of this factory would increase, in view of the number of cigar stores operated by the Shulte interests over the country. The report that the factory would close was verified at the office of the factory, where it was said that the business would be liquidated and the factory closed. From others it was learned that the same brands as are at present manufactured here will in future be manufactured in New York. A. W. Arnold, who has been manager of Mi Favorita factory, returned Tuesday from New York where he went to confer with the new owners of the factory. When en route home, Mr. Arnold visited his daughter, Mrs. Carl Witzig, who, with Mr. Witzig are now making their home in Miami.

Cigar Production Shows Increase

There was a slight increase in the number of cigars made here during August, compared with the July output. July's report from the office of the stamp deputy collector here shows that in July 3,715,999 cigars were made, and the report for August shows a production of 4,024,834. The revenue paid for stamps during last month amounted to $32,543.76. Of the several classes of cigars made during August, class C led. Of this grade there were 2,653,933 made. Class A numbered 827,400, class B 272,951, class D 263,750 and class E 6,800.

Greater Activity Predicted

All the factories are working well, and as one manufacturer said this week, "Within the next couple of weeks business will be brisker than it has been in many years."

Cigar makers are needed in several of the factories, and signs to this effect are yet appearing on the doors of some of the factories, although Monday saw a number of new cigar makers seated. With the receipt of holiday orders, which are coming in early this year, indications point to a successful season for the trade.

Several of the large factories maintain that the demand for cigars cannot be supplied unless the cigar makers are to be had. There is work here for several hundred good cigar makers, and by the middle of October this number will be increased.

The E. H. Gato Cigar Co. increased the force, and this was also done at Thompson & Co.'s factory. The Cortez factory is working a full house. Reports from the Havana American are to the effect that this factory also increased the force this week.

There was a rumor current on the streets this week that two large factories would locate here within a short time. One was said to have selected the building where the Ruy Lopez factory was formerly located. Nothing definite could be learned of this intended increase in the ranks of the cigar manufacturing industry here.

Tobacco Culture in Georgia

The tobacco market at Blackshear just a short distance from Waycross on the Coast Line Railroad, paid to growers of the product in the first week over four hundred thousand dollars. This is an enormous sum to spend in any community but it was made by the farmer and went direct to his hands.

We can well imagine the conditions created by such an outlay at this time among the men that most need it, and most entitled to it, the farmers themselves. This is one of the many cash crops that this country can well afford to look into.

The people of the northern part of the county closest to the established tobacco markets of South Georgia have been studying the proposition and have visited the markets at Hahira and Tifton for the purpose of getting the first hand information. They are enthused over the prospect, for it is well known that Thomas County has an abundance of tobacco lands and the sort that is grown now, for use in cigarettes, is always in demand and generally brings a very fine price.

The result of this cash crop has knocked cotton sky-high in some sections and there is more profit than there ever was from cotton. Imagine paying out two hundred and fifty thousand dollars into the hands of the farmers of Thomas County in one week for one crop. It would be a big incentive to make his crop a success and at the same time would prove advantageous in the development of the diversified problem that is projected for Thomas County, dairy cows, hogs, poultry, peanuts, truck and tobacco.

Working to this end in a gradual but sane way will prove most beneficial and will bring untold thousands of dollars directly into the hands of the producers. —*Thomasville (Ga.) Times-Enterprise.*

New Bern Sales

NEW BERN, N. C.—Aug. 29.—Between 30,000 and 40,000 pounds of tobacco were sold on the floors of the Planters warehouse, the city's only independent house, on the opening break today, bringing an average of approximately 23 cents. Observers said it was a better break than had been expected. The quality of the weed was only fair, as is generally the case at the opening.

CAUTION

THE LA ROSA DE PARIS CIGARS are not genuine unless our name (Starlight Bros.) is printed on the labels attached to the inside of the box. Every box bears our name in order to protect smokers against unscrupulous sellers who are trying to supplant the well-known LA ROSA DE PARIS CIGARS by inferior goods.

Detroit Dealers Preparing for Holiday Trade

Anticipate an Unusually Good Season—Old Stocks Being Pushed to the Front to Make Room for Fresh Supplies of Merchandise—Manufacturers Ready to Meet Demands.

DETROIT, Mich., Sept. 9.—There is every evidence that dealers are beginning to make ready for one of the best holiday seasons enjoyed in many years. Old stocks of off brands are being pushed to the front to close out. Dealers in general are house-cleaning and getting humidors all cleaned out to receive holiday merchandise.

The old, so called, "war baby" stuff will be less in evidence this year than at any time during the past five years. Dealers' stocks are in better shape now than ever before. Manufacturers, likewise, are all set to meet the demand. Many orders for holiday packing have already been received by local plants.

Featuring Bayuk Brands

Howard Peel, advertising manager of Bayuk Cigars, Inc., Michigan branch, returned from a trip up-state this week, where he has been conducting an advertising campaign on Map-o-Cuba and Havana Ribbon cigars. Both of these brands are going well in all sections of the state, Mr. Peel reports; here in Detroit they are well established.

M. Goebel, Bayuk Cigars, Inc., is back on the job again, after a week's fishing vacation at the lakes.

D. M. Frame, of Stephano Bros., Chicago, spent a few days in the motor city recently.

Fast Movers

William Burke, formerly with Bayuk Bros., is now covering Wayne and Oakland Counties for Charles F. Becker, succeeding Robert Emmet Moriarity, who is now with the Fields Cigar Corp. Mr. Burke is doing well in his new connection and says Webster, Robert Emmet, Blackstone, Cuesta-Ray, R. B. and Havana Sticks Cigars, are fast moving brands.

Mr. Slader, Western Representative for Perfecto Garcia & Bros., Tampa, Fla., spent a few days in our city last week.

Isaiah Rosenthal, manufacturer of R. B. cigars, was a recent visitor to Detroit, accompanied by his general representative, Henry Lichtig, calling on his distributor, Charles J. Becker. This house has opened over four thousand accounts in Detroit in the short time it has had the agency and reports a seventy-five per cent repeat business coming in.

Mike Meyers, R.B. ace, spent the week end at Niagara Falls. He was back on the job Monday, but he didn't look the same.

Are Well Placed

Bert Johnson, of the Bert Johnson Cigar Co., spent a week in New York recently. Tilford cigars, jobbed in Detroit by the Bert Johnson Cigar Co., are going in a fine way. This popular brand enjoys a wide distribution among drug stores and the better cigar stands and clubs throughout the city.

E. P. (Fred) Oakes, western representative for the E. H. Gato Cigar Co., Key West, Fla., was a visitor this week.

William Lakin, sales-manager for Waitt & Bond, Newark, N. J., was a visitor this week, calling on his distributor, Charles F. Becker. Blackstone cigars are going stronger in this market now than at any time in the history of the brand. A heavy billboard advertising campaign, backed up by the aggressive sales force of Charles F. Becker, have put this brand well in the lead in its class.—JIM.

Meets Old Friends

Joseph Cullman, Sr., has returned from his Canadian trip, after meeting many old friends and making more new ones.

GREATER PRODUCTION AT LESS COST

San Francisco News

San Francisco, Cal., Sept. 5.—Just as the factories were beginning to operate more freely, even the little ones beginning to place new orders for leaf supplies, the demand for higher wages and the consequent walk-out looks like a discouraging occurrence. However, the strike has not spread. The Petri Cigar Co., the largest plant affected, report that they now have 25 men again at work, and as their trade is well stocked, they figure that they will be able for some time to fill all pressing orders. With their new machinery and fine equipment they will be able under present conditions to turn out a half million Van Camps per month to fill in short sizes. As for the Toscani situation, they say they are not at all worried, for they have a stock of twelve million with which to supply the trade for some time to come.

Cimino, Cortini & Co. are likewise in no cramped position, as they were accumulating stock in anticipation of a holiday rush. Mr. Cimino has shown how little they are concerned over the situation by the fact that he has gone on his annual leaf-buying trip to Havana.

It would look as if people were settling down early for a heavy fall business, as the first day of September saw about as big a jam of automobiles on Market street, from end to end, as has ever occurred on ordinary business days; and the sidewalk crowds were more than could well be accounted for.

E. Goss, of E. Goss & Co., is one of those who believe there is a sure thing ahead. He says it cannot go wrong with the busy season coming on, for the whole summer has been a period of gain.

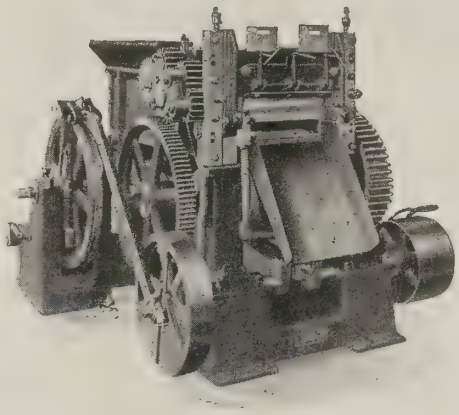
And when there is business in the air, it can be seen by the way the tobacco jobbers begin to move; for business is as exciting to them as forbidden Old Scotch.

Sol. Eisenberg, representing the interests of Leo Hirsch, New York leaf merchant, has been making the rounds of the city.

Joe Hanly, the cigar broker of Kansas City, Mo., has been visiting his distributors, E. Goss & Co., in the interest of the American Export Tampa nickel brand.

A. Dallman, the Wm. Demuth & Co. pipe representative, has stocked up the trade and departed for a visit to the eastern factory, expecting to return in October.

R. W. Hickey has been up from Los Angeles putting over the Comoy pipe on the willing dealers of San Francisco.



The H. Sutliff Pipe Shop has definitely announced that it will move November 1 to 580 Market street, a block below its present location. The concern will have there a smaller store room, but larger factory space above.

The local factories are already preparing holiday packages. The Petri Co. has some beautiful put-ups in cans of 25, with truly splendid decorative effect. E. Goss & Co. are also beginning work on holiday sizes. The general tone of business pick-up is really felt.

Sells Tampa Cigars

L. E. Craddock makes a living selling Tampa made cigars. He has built up a good business representing certain factories there and takes the entire output of one and distributes them over several states. His company is called the L. E. Craddock Sales Co., and the home office is in Pensacola. He likes to live here and throughout his travels never loses an opportunity to boost Pensacola, as all good Pensacolans do.—*Pensacola (Fla.) Journal.*

Connecticut Notes

HARTFORD, Sept. 10.—The tobacco fields rough the Valley are now about all eared of the crop grown the past sea- n, with the exceptions of a few scatter- g patches which are still growing and ing left to cut at a later date.

The crop has been harvested under od weather conditions, not only for the ork of cutting but for the tobacco when the sheds, being mild and warm, favor- g a quick cure, and the air sufficiently y to absorb the moisture in the sheds, d it is not thought that there is any ole sweat" thus far. Several of the owers in the Broadleaf section fortified emselves with a supply of charcoal, in se of bad weather, but have not used y as yet. All through the season from e time that the seed beds were sown, nditions have been more or less favor- le to the crop, and the growers have ken every known means to carry the op through, from the very first, by raying seedbeds, and it would now ap- ar that "wildfire" was checked at the ginning of the season, as it did not de- lop in the fields to any marked extent.

The most serious setback that the crop d was during the latter part of June ring the transplanting season, when it as very hot; many fields were badly rned which required them to be reset; is set the growers back a few days, but persistent work they finally got the lds started; rains came at needed pe- ds during the summer and these reset lds made wonderful progress. They e now ready to be harvested as a full own crop.

No serious storms or hail hurt the crop any great extent, and today fully 90 r cent of the entire crop of the Valley safely housed. The earlier cut is well ng with the curing.

The leaf is now where it can be judged to the colors and quality, and both are e best that have been seen in the Valley r many years. The cured leaf shows much better bodied product, more elas- ity and more weight; and it is safe say that the crop of the Valley is ab- lutely the best one that has been pro- ced here for at least 10 years.

Growers found in harvesting that it ok more shed room to hang the present op than in former years, and all of the ailable shed room that could be se- red was snapped up quickly. In fact, me had to build additions to their eds.

Expensive to Grow

Growers have also found that this crop s been an expensive one to grow all e way through. The fertilizers used re high, and the labor needed com- anded big wages, and during the cut- g period wages were the highest own in the Valley, and it is stated by reliable source that some growers paid high as $7 per day and included board ring the harvesting period. But the erage wage was $5 to $6 per day with- t board.

School children had no trouble in find- g a job at wages from $2 to $4 per day d all the tobacco growing towns in this inity postponed the opening of the hools from one to two weeks so that e children could continue to work in the fields. The work for the smaller boys are on plantations where shade is grown. There they pick the leaves, while the girls sew them on the lath. In the stalk cut tobacco, boys are employed to hand the tobacco to the stringer and drive the teams to and from the sheds. Nearly 400 children were thus employed on tobacco farms in the vicinity of Rockville and Ellington, Conn., and have been a big factor in the harvesting of the crop.

Many a business man in this section can recall his boyhood days when they were spent "down on the farm" during the tobacco harvesting season.

Many of the growers are now taking a vacation and with some a trip to Canada seems to be popular, while others go to the shore, where only the water is wet.

About the Profits To Be Made in Meerschaums

Before the war all good tobacconists knew the profit in meerschaums, but when the World War and the Turko-Greek war cut off the supplies, meerschaums were gradually pushed back, till finally they are hidden at the back of the store where no customer ever suspected their presence, so that this excellent source of profit became neglected.

Now, with the return of the Anglo-Austrian Bank into the meerschaum mines, adequate supplies are again coming into market, and at prices not higher than the normal advance in all other articles.

Some may not realize that one sale of a meerschaum pipe at $12 brings as much profit as 200 customers buying each a package of cigarettes; or 170 customers buying each a 10-cent cigar.

Considered from the point of money invested, meerschaums also are a good proposition. For $200 a very fine assortment of pipes can be purchased, which, properly displayed, are sure to win the customer and get the profits. A dealer can have a stock mounted with genuine amber that will not even change color, but remain bright and very attractive in every way.

Once a dealer has a satisfied meerschaum customer, he can count on his business for tobacco and other wants indefinitely. The National Importing Co., Inc., 2-6 Elm street, New York, can supply on request a list of manufacturers who carry the new Anglo-Bank meerschaum.

Jugo-Slavia Tobacco Harvest

WASHINGTON, D. C., Sept. 4—Tobacco harvest in Jugo-Slavia this year is expected to show considerable improvement over the comparatively poor showing of last year, according to a statement released by the Government Tobacco Monopoly Administration. The 1922 crop amounted to 21,520,000 lbs., which was below the requirements of the country and necessitated the importation from Holland of commoner tobacco in addition to the finer qualities usually imported. The crop this year is estimated at 45,000,000 lbs. and, it is said, the Government Monopoly will pay 200, and in some cases 300%, in increased prices. The acreage planted this year is almost double the acreage planted last year and beneficial rainfall gives hope of a very satisfactory crop.

Tobacco Is the Leading Industry in Virginia

RICHMOND, Va., Sept. 8.—The tobacco industry, in all its forms and branches, has long been regarded as the leading factor in the business of Richmond.

And Richmond, in the heart of a splendid tobacco section, is looked upon as one of the great and influential tobacco centers in this country.

Practically every phase of the tobacco business is represented in Richmond, where, in capital invested, the number of sales and the great stream of money which it causes to flow through the banks of this and other cities, the industry probably means more than any other one to the great prosperity and rapid growth of the city.

Tobacco plays the leading part in Richmond's industrial life for, according to the latest census figures, the industry, ranks second in Virginia as its products form nearly 12 per cent of the aggregate value of all production in the State.

Largely Grown in Virginia

Tobacco is largely grown in Virginia and much of it is of fine quality. The 1922 crop was approximately 170,000,000 pounds and brought the growers some $42,000,000. Only three times in the history of tobacco growing in Virginia has this vast sum been surpassed, and these years came during and immediately following the recent war when prices were highest.

The fact that the Indians were found smoking tobacco in their long pipes has given rise to the suggestion that the plant may first have grown as a weed, but it is claimed that it has never been found growing anywhere except where it was planted and cultivated.

There are several grades or kinds of tobacco and practically all of them are grown in Virginia. The sun-cure tobacco is used for chewing, smoking and scrap and some of it is exported. The flue-cured is used for cigarettes, for chewing, largely for smoking and a quantity of it is exported, especially to Great Britain. Nearly all of the dark hard-fired tobacco is exported, except a certain perce which is used for snuff.

The famous sun-cured tobacco con Richmond from Caroline, Louisa and tiguous counties. In earlier days thi practically the only tobacco chewe many of Virginia's leading men.

Home of the Cigarette

Richmond is the home of the ciga Virginia stands second among the S in the manufacture of cigarettes, an great bulk of her output is made in city. It is estimated that there 60,000,000,000 cigarettes made in country each year and perhaps a of these, or 20,000,000,000, are ma Richmond. The increase in populari the cigarette is shown by the fact th 1905—just eighteen years ago—there only 4,000,000,000 made each year.

Virginia stands fourth in the man ture of cigars, and the P. Whi Branch of the P. Lorillard Co., he said to be the largest in the world.

Chewing and smoking tobacco man tured in Richmond amounts to from 000,000 to 15,000,000 pounds each yea

Much Leaf Handled Here

There is a great volume of leaf tob handled in Richmond. The Bri American Tobacco Company has headquarters and extensive wareh in Richmond, and the Export Com handles all the leaf tobacco for British-American. The resident aging director of the Imperial, Lesli Reed, is a resident of Richmond, and concern has large interests here.

There are a number of tobacco mission firms here to serve dealers growers, and Richmond's storage ities are extensive. Public and pr warehouses here carry from 40,000,0 50,000,000 pounds. There is mainta on this market a public inspector, an services are an important factor in sale and handling of tobacco.

Senator Smith in Danvil

DANVILLE, Va., Sept. 10.—Senator D. Smith, of South Carolina, organ of the "farm bloc" in Congress, will n

address here Thursday in the city ernacle. He is coming to discuss co- rative marketing, and the amount of olicity which is being given to his en- gement indicates that this is the pre- son rally of members of the Co- rative Marketing Association, and a ngthening of ranks on the eve of the season. Senator Smith has been king addresses throughout the tobacco s and has been drawing large audi- es. He is not noted for his conserva- remarks.

The Japanese Situation

DANVILLE, Va., Sept. 11.—The possible ct of the Japanese earthquake on the and for cigarette tobacco by that na- has been discussed here with interest. Sidney W. Minor, of Dibrell Bros., was in Tokio last May, says that ar no news has come from Tokio rela- to the large stocks of tobacco held e by the government, which holds a opoly on the tobacco in Japan. Col. or says that the tobacco stocks are in large, one-story brick and steel ehouses, similar in type to eastern dings. He believes that if these build- were shaken down by the earth- ce most of the leaf can be salvaged, if fire has swept the warehouses, then likely that there will be a keen de- d for native types of tobacco most in the manufacture of cigarettes. n is increasing its consumption of rettes, the upward trend being noted e the government banned the use of m.

Danville Man Safe

nquiries among tobacco men reveal no men of this section are in the stated area. There was considerable anxiety for a few days for J. Pinckney Harrison, who landed in Yokohama 24 hours before the earth quake en route to Shanghai to represent the Universal Leaf Tobacco Co. Mr. Harrison did not break his journey at the Japanese port and he has cabled from Shanghai to his parents here saying that he was safe and beyond the danger zone.—TETLEY.

Danville Market to Have Quadruple Sales

DANVILLE, Va., Sept. 10.—The Danville tobacco market will open on September 25, with four sales running. There is some belief that the crop has been injured during the past few days by copious rains accompanying a succession of thunderstorms, though this damage is not general. Farmers are busy cutting and curing and it is reported that good color is being secured. The market here will open with six warehouses running.

The Co-operative Marketing Association has not announced the date on which it will begin to receive deliveries here. This will not be until the South Carolina season has been completed.—TETLEY.

New Bern Sales

NEW BERN, N. C., Sept. 8.—Tobacco sold on the auction market here last week, 55,054 pounds; average, $17.65 per hundred pounds; total value, $9,717.22. Amount sold this week, 73,610 pounds; average, $16.41 per hundred; total value, $12,082.16. Total sales for the season, 128,664 pounds; average, $17.09 per hundred pounds; aggregate value, $21,799.38. —NEW BERN TOBACCO CO.

Big Sales at Greenville

GREENVILLE, N. C., Sept. 8.—Quite unexpectedly to the warehousemen and buyers, there was a big increase in the offerings of tobacco on the market this week. Monday, Tuesday and Wednesday showed no unusual movement, the sales gradually increasing in volume. But Thursday there was much more on the floors, and Friday came within a few pounds of 650,000, making the sales for the week over 1,500,000 pounds, and to date for the market, near 2,250,000 pounds, averaging about $22. To finish Friday, the sales ran a few minutes over time, double sales being run on the last floor.

The principal offerings have been tips and lugs. These have varied in quality from practically worthless, bringing as low as $3 and some of better quality bringing as high as $30. There has been some increase in the offerings of better grades, but they continue light. These have ranged as high as $60, but the average has been below that figure. Some few farmers appear to be selling their entire crops. There seems to be now a "market-early" sentiment growing. Big sales are expected within the next few weeks.

Curing is finally over and attention is now given to grading, rain having something to do with hindering other work. With good weather, sales would become lighter, as fodder harvesting and cotton picking would claim the time of the farmers.

No Deliveries at Co-operative House

The co-op house is not yet ready for receiving tobacco, and none has come in here. Some deliveries have been made to the Ayden warehouse, ten miles sou of here. While there is some feeling b tween the Co-ops and non-Co-ops some sections, there has been little fr tion or clashes. On the opening day that following of the Washington m ket, twenty-five miles east of here, t farmers had a "Co-op scrap," and the was a lively time for a while, with pro pects of several others participati However, it passed off with hon about even and things have since be quiet on the "frontiers."

Landlord Kills Tenant

But yesterday, in this county, ne Shelmerdine, twelve miles southeast here, a Co-op dispute had a fatal endi It seems a landlord was a strong Co-H He had a negro tenant who was n The landlord, of course, put his share the tobacco into the Co-op. The neg tenant was not a Co-op and preferr selling his share on the open mark This did not meet the approval of t landlord, who persisted in his Co-op a vocacy until trouble followed, resulti in the landlord shooting the negro tena who died shortly.

There is much feeling in some secti and trouble may result when least e pected. At Pine Tops, Edgecom County, the Co-ops are not in high fav That is the town in which a warehou man, last season, bought a lot of Co tobacco and resold it on the open marke realizing *ten cents per pound profit*, o what the poor, dear farmer got. Char Manning, of this place, who is with Co-ops, was sent there, but the atm phere was so decidedly anti-Co-op th he has gone to the Ayden house wh he hopes to find it more congenia Co-op.—KING.

To Investigate Foreign Market for Burley

LEXINGTON, Ky., Sept. 8.—Possibilities the development of a foreign market r Burley tobacco will be investigated the Burley Tobacco Growers' Co-erative Association, and if conditions arrant it a sales force will be sent into rtain countries of Europe to present e merits of Burley tobacco to those vernments which have a state monop-y of the tobacco business, according the decision of the board of directors the Burley association, in session here is week.

President and General Manager James Stone reported to the board that on a cent visit to New York he found the nufacturers friendly and that he then oked into the situation as regards a ssible foreign market for Burley to-cco. He said that some of the new untries of Europe, such as Poland and echo-Slovakia, and others which had vernment tobacco monopolies, might come Burley customers if the matter re properly presented to them by com-ent salesmen.

Director Elliott Northcott, of West rginia, moved that the executive com-ttee be instructed to investigate the uation and given power to act, which s unanimously done by the board.

Chief of the Field Service Division illiam Collins reported the addition of 00 growers to the membership the past nth, and a total membership of more n 90,000 in the states of Kentucky, Indiana, Ohio, West Virginia, Tennessee and Missouri.

Heavy Auction Sales at Wilson

WILSON, N. C., Sept. 7.—All roads and by-paths now lead to good old Wilson, the Big Tobacco Town. Today the zenith of the season's sale thus far was reached, when, according to the supervisor of sales, 8,821 *piles* of tobacco was on the floors of the six mammoth warehouses; and, when the sales closed for the day at five o'clock, prices were just as stiff as they were when they opened at 9 A. M. Everybody was happy—not a single "tag" turned. Some grades sold as high as $60 per hundred. Everything moved, as it always does on Wilson's tobacco sales, like clock work. Calculating these 8,821 piles of tobacco at an average weight of 110 pounds each, they total 970,000 pounds, which, when added to the aggregate reported last night by Mr. Johnson, the efficient supervisor, who always issues his reports on Thursday, makes a grand total of 4,037,000 pounds sold on the Wilson market since the opening August 28. The average of $22.57 aggregates nearly a million dollars paid out here to tobacco farmers during the nine sales days.

Similar reports of heavy sales and good prices come to us from all over the tobacco auction towns of eastern North Carolina. The man who invented that cash over the counter system is deserving of the highest praise.—MCFARLAND.

LEAF TOBACCO BROKERS

815-817 West Main St., LOUISVILLE, KY. 18-20 E. Pratt St., BALTIMORE, MD.

— WE ARE BUYERS OF —

Burley, Aircured, Green River, Fired Dark, Maryland, Virginia and Seed Leaf Tobaccos.

On all markets. We air dry and steam dry on most of the loose markets, and have the latest improved Philadelphia Textile Steam Dryer in our Louisville Factory for handling Leaf and Strips. Orders and correspondence respectfully solicited.

Paducah Prospects

PADUCAH, Ky., Sept. 8.—There has been very little activity in the loose tobacco market during the past week. There continues much inquiry for lugs and common and medium leaf, and the association has made some sales of both, but the number of hogsheads sold has not been made public. There is very little stock of any sort left in the independent dealers' hands. What little business we have is through the association. They have sold practically all of their common lugs, but still have considerable stock of medium and good lugs, also low, common and medium leaf. Their prices for medium to good lugs run from 7 to 12 cents, and for common to medium leaf 12 to 25 cents.

The weather during the past week has been unfavorable on the growing crop. Too much rain and damp weather, which has interfered with cutting, is also causing further damage from black fire. This disease seems to be worse in some localities than others. In some cases it has spread very rapidly during the past week and a large part of the crop will be cut and housed before it is ripe, which means to make a commoner grade and also means less weight, but there are sections where there is practically no damage from black fire, and still opportunities for making a large per cent of good, useful tobacco; but the crop cannot stand a continuation of rainy weather and make the good quality that we had hoped for. It is hard to estimate the damage to the crop from black fire, and also hard to estimate the quality of the crop, but the indications are that we are going to have a badly mixed and defective crop, but I think with this we are going to have a fair per cent of very useful tobacco, but it will take several weeks to determine what the quality and probable yield will be. The acreage is large and the growth of the tobacco is very much larger than the average and the yield will be above the average regardless of disease or damage. Indications are that the crop will contain a large percentage of low grades and lugs on account of the black fire and other defects. The rainy weather is bringing more worms and they have been doing more damage during the past week than heretofore. Farmers are spraying the plants with poison, but it rains and washes it off about as fast as it is put on. Conditions could not be less favorable for the maturing and developing of the crop than they are at present. A week or ten days' warm clear weather would be the salvation of the crop.—W. B. KENNEDY.

Co-ops Activity at Clarksville

CLARKSVILLE, Tenn., Sept. 8.—Although no contracts were signed on the ground, reports of district contact locals in Cheatham County, made at the meeting of the county central local at Cheap Hill last Saturday, were most encouraging as to the prospects for a good sign-up when the campaign is formally launched. Active local operations were reported from practically every district. The Cheap Hill meeting was attended by 250 or more people, the affair being a combined community picnic and central local meeting, the session having been changed from Ashland City, the county seat, at the request of Cheap Hill citizens.

Much encouragement to the association members resulted from the talk by V. A. Bradley, of Robertson County, assistant commissioner of agriculture for Tennessee, whose theme was co-operative marketing. Mr. Bradley said among other things that agriculture is just starting to do what industry did years ago, organize to put its products on a commodity basis. He predicted a bright future for co-operative marketing, and particularly for the tobacco end of the game.

Mr. Bradley is scheduled to speak here at the meeting of the Montgomery County central contact local on the fourth Saturday in September.

Laurin Edmondson, local assistant in the Field Service Department, reports that the district locals in Montgomery County continue to hold enthusiastic meetings and that a number of contracts have been signed at these meetings.—PRESS SERVICE BUREAU.

Polish Farmers May Grow

WASHINGTON, D. C., Sept. 1.—The Department of Commerce has received word that previous rulings whereby farmers in Poland were authorized to grow tobacco if they would secure their seedlings from the Government only and would sell their entire crop to the state at a price fixed by the latter, have been modified. The Ministry of Finance now provides that tobacco grown under permits, while it may not be sold or given away to private consumers, may be retained by the grower for his own personal use and is not subject to compulsory purchase by the Government. The area for this purpose is not to exceed 10 square meters for each planter.—LAMM.

Pennsylvania Tobacco Market in "Healthy" Shape

More Activity and Business Than Since First of Year—Many Prospective Buyers Seek Large Quantities—Jobbers Doing Considerable Buying—Interesting Cigar Data.

LANCASTER, Pa., Sept. 10.—The Lancaster tobacco market is in excellent shape at the present time, and is showing more activity and business than at any time since January 1. The waning summer months do not find weaker buying as the new crop goes into the sheds, and inquiries for samples, as well as actual sales of goods, are many.

A steady stream of requests is continually pouring into Lancaster, packers report, and many of the interested buyers state that they are in the market for comparatively large quantities of Pennsylvania. Particular interest is being displayed in binder goods, and the majority of the requests for samples are for that grade. Low grades are also finding sale and, on the whole, the condition of the market is what the trade designates as very "healthy."

Jobbers in Evidence

A large percentage of the buyers are jobbers from every section of the country who need the Pennsylvania for their manufacturing customers. The fact of cigar leaf being in demand in this quarter is a reflection, no doubt, of the stimulus given to the small manufacturing interests for the Christmas trade. The increase in business for these smaller cigarmakers makes itself felt almost at once in the quickened flow of small orders from the jobbing trade and, while it is a question as to how long the available supply of this class of tobacco will last, it is quite certain that there will not be a shortage.

Cigar Figures Compared

Figures from the local revenue office on the sale of tax stamps for the month of August indicate a continued falling-off of Lancaster's output of cigars in all classes except the Class B article, which retails at eight cents or two for fifteen cents. Following are the figures of production, showing the relation of business this year ago with that of today:

Cigars	Aug., 1922	Aug., 1923
Class A	7,289,660	3,383,860
Class B	6,365,900	6,588,120
Class C	3,639,410	3,600,780
Class D	3,110	100

A slight increase in the production of Class B cigars may be noted while the output in Class C has dropped somewhat. These two classes, however, show materially the same figures for the two years while it is the higher priced and the cheap cigars that show the effects of the mild revolution being wrought in the cigar industry. The low priced Class A article has exhibited a drop of about 50 per cent during the twelvemonth, while the expensive Class D cigar has suffered even more. The gross revenue receipts on cigars and tobacco show a drop of $21,835.83 from August, 1922, to August, 1923.

Human nature is popularly supposed to run to the extremes and to show a desire for nothing near the average, but this is undeserved satire if the data on cigar consumption is to be taken as an indication of preference in smoking.

Numerous Transactions Take Place

Numerous sales during the past several weeks have resulted from the stimulated interest in Lancaster grown cigar leaf. Amos Cooper, of Landisville, sold a quantity of high grade 1922 tobacco to Charles Cole, of Lancaster. The amount of this sale ran about 500 cases, but the price was not made public.

Binders have been the chief source of interest and are being shipped from nearly every packing establishment in the city and county. Some merchants, however, no longer have any of this grade of tobacco and a few of the orders have been forced to go a-begging. L. H. Nolt, of Lancaster, has sold over 300 cases of binder tobacco during the past two weeks.

New Warehouse in Prospect

The purchase of a large tract of land from B. F. Davis and Louis Spencer by John L. Reist, a Lancaster packer, presages a new tobacco warehouse for this section. The land is located at the corner of North Water and West Liberty streets and is a plot 123 feet by 90 feet in size. It is said that Mr. Reist contemplates the erection of a large warehouse on this site in the near future which will add materially to the packing facilities of the city. Mr. Reist is well known in local tobacco circles and has been packing cigarleaf for a number of years. His operations hitherto have been limited to about five or six hundred cases a year, but it is more than likely that he will handle a considerably larger quantity of tobacco in the future.—KEYSTONE.

Baltimore Market

BALTIMORE, Md., Sept. 6.—Gieske & Niemann, leaf tobacco merchants, referring to the hogshead leaf tobacco transactions, say:

MARYLAND.—We have to report for the past week, receipts of 1,790 hogsheads, with sales of 1,634 hogsheads. All grades in demand.

OHIO.—Nothing to report.

Association Data

The Leaf Tobacco Association of Baltimore City issues these statistics for the week ending Sept. 5:

MOST GOOD MILD CIGARS

Contain Porto Rican Tobacco

At last Porto Rican Tobacco is being accorded its proper position by Cigar Makers and Smokers alike. No longer is it necessary for the Manufacturer of a good, mild Cigar to deceive the public by advertising it as a "Mild Havana."

Numerous publicity campaigns are helping to acquaint the Smoker with the fact that an all Porto Rican Cigar or one in which the Tobacco from that Island is blended with other tobacco, makes the ideal smoke—mild yet fragrant; free-burning and rich in body but not heavy. In fact, it is claimed that a Porto Rican Cigar can be partially smoked, relighted and finished the following day with practically the same satisfaction.

The Porto Rican Government

Has established in this country a Tobacco Guarantee Agency which is conducting an intensive educational campaign to both Manufacturer and Consumer.

Cigar Manufacturers can now tell the origin of Leaf or Scraps sold as Porto Rican by examining the Guarantee Stamp affixed to every barrel or bale.

WHITE: Guarantees it to be pure Porto Rican Tobacco.
BLUE: That it is only part Porto Rican Tobacco.
PINK: That it contains no Porto Rican Tobacco.

MARSHALL FIELD

NO OTHER CIGAR IN AMERICA LIKE IT
IT IS DIFFERENT
THERE ARE REASONS FOR IT

The manufacturer has devoted his life in the science of tobacco curing, and the art of blending. The objectionable properties which tobacco contains are eliminated, such as Rosin Gum which makes tobacco strong, and the natural Ammonia which makes tobacco sharp and bitey. It is then ripened, mellowed, and blended.

All Marshall Field Cigars are

Very, Very Mild Regardless of Color

Distinctive Quality

Liked by all who smoke them

Marshall Field wrapped with finest Vorstenlanden Java.

Philadelphia Enjoyed An "Elongated" Holida

Cigar Production During the Week Was Curtailed As Resu of Lengthened Lay Off—Retail Trade Making Some Gai —Country Jobbing Business Better Than Local.

PHILADELPHIA, Sept. 11.—The Labor Day Celebration continued during several days of the week, by many of the higher-paid hands in the Philadelphia factories, with the result that production was to that extent held back; now, however, that the vacation season is over, there is considerable speeding up of output. The gain which the big makers have been able to secure has been at the expense, to some extent, of the smaller ones, for the reason that there has been no substantial increase in the number of city hands and larger employment in one place means that the available supply must be drawn from another. However, since business more and more is becoming concentrated in the plants of the big producers, the realignment of forces is only in harmony with shifting trade conditions. A comparatively small number of accessions have come from the country districts nearby, but this is not a large element in the situation and has only slightly relieved the existing shortage.

Retail Business Picking Up Speed

Immediately following the holiday of a week ago the retail trade found some falling off in business, but towards the close of the week the loss was recouped, and the start of the present week indicates that the gain will be continuous. Sales in the stores of the centrally located dealers are not yet quite up to the mark of their expectations but the tendency of the buying is unmistakable, and there is no apprehension on the part of any of them that the prosperous days so long anticipated are on the eve of arrival. Jobbers report country trade as much better than the local. The leaf market is on the whole in a very satisfactory condition in view of the exceedingly high prices which maintained all along the line. All of the local cigar manufacturing establishments are now working at nearly the peak of possibilities and they look for a long continuance of the present very active market for boxes. It is believed that this year there will be an increased demand on the part of manufacturers for 40ths.

A "Bomb Business"

A bomb exploded at an early morning hour during the week in front of the cigar store of Reba Schwartz, 471 North 9th street, damaging the property to a considerable extent and causing consternation in the neighborhood. No serious injury, however, was done to any of the residents. Fragments of the bomb and pieces of lead wire were found by detectives and it is hoped will serve as a clue to the identity of the perpetrators.

Return of Adolf Loeb, president of K. Straus & Co., Third and Vine streets, who for the past three months has been sojourning in Europe, is anticipated by the headquarters by the middle of September. When last heard from Mr. Loeb was visiting in Czecho-Slovakia. Herbert Rheinstone is touring New York State. George Kauffman, of the firm, has returned from a visit to the Baltimore trade.

Increasing Forces

Increased employment forces have been made at the factory of F. C. Shieble Co., 2331 North Eighth street, for the production of Clytus, on which the firm is concentrating production under the supervision of Durban Acker, who for many years was connected with the importing grocery firm of Finley Acker Co., and who took over the Shieble business upon severing his connection with that firm over four years ago.

Branching Out

For the first time Dependo, the brand of long manufacture but recently added to the Associated Cigar Manufacturing Co., 1039 Race street, which formerly was made by the Smith Cigar Co., of Reading, whose factory is now controlled by the Associated Co., is to be introduced for the first time in its business history of over forty years the trade in the middle west. This mon the Associated Co. is to place on sales force a representative who w specialize in the middle western states the sales of Pependo and Reyoma. Th long enjoyed a patronage in that sectio Reyoma heretofore has been confined the Chicago, Cleveland, Detroit and oth Great Lake sections, but is to have territorial sales expanded throughou other western states.

A New Packing

There is being placed on the market new package of 44 cigars in cans pack one-twentieths and in the Invincible sha with an attractive lithographed receptac for this new shape. It is being market through the 44 Sales Corporation of t Consolidated Cigar Corporation, and d tributed from headquarters at 11th Wharton streets. The new Invincil shape has been on the market but tv months but so popular has been its i troduction that production cannot keep with demand and there has been added the factory forces additional hands speed up the filling of orders. This we the 44 Sales Corporation is introduci a new window display for Adlon, co sisting of three pieces, the center a lif like figure of a man smoking an Adlo with its two side pieces of an ash tr on which rests a cigar and a large lif like box of Adlons on a table. All a in easel style and can be used as a s window feature or in combination wi Adlon cigars. It is in fourteen colo five by three feet. H. T. Walsh, w for many years has been connected wi the sales force of the 44 Corporation, h resigned from the organization, followi a nervous breakdown. C. W. Kee formerly with the General Cigar Co., a lately with the Congress Cigar Co., h taken over the duties of Walsh and w cover the main line territory.

Concentrating on Bellfair

With the return of cigarmakers fr the Summer vacation the B. G. Da Co., which recently took over the facto of Sig. C. Mayer, at 306 Cherry stre and remodelled and modernized the bui ing into a factory for the Schulte bran is now concentrating production on Be fair and will increase its force by t addition of another hundred and twent five expert cigarmakers. There are n employed in the factory three hundr workers under the supervision of Lo Stein, who is the local superintende Mr. Stein has returned from a thr weeks' vacation spent in Atlantic City

Starting Fall Campaign

Jacob L. Kraus, vice-president of A tonio Roig & Langsdorf, 317 North 7 street, who has been spending his vac in Maine, returned to his desk last wee The sales force of Roig & Langsdo started out on its Fall itinerary aft Labor Day, to push the sales Girard. E. L. Weil, of the sales organiz tion, will cover New York, Pennsylvan and Michigan territory. So popular h proved the newly introduced Epic, a te cent size in the Blunt Panatella shape the Girard brand, that orders are pilin up beyond the capacity of the plant to f them. It comes packed in fifties and w introduced a month ago. It is arrang in a thirteen top packing, which mak an attractive display box, making it feature of saleable qualities wherever is shown. Simon Dietz, sales manage spent last week as part of his vacati in Atlantic City.

Bayuk Activities

Louis A. Kramer, of Bayuk Cigar Inc., has returned to his desk from automobile trip through New Englan Thad. W. Griffin, Virginia representati of the corporation, is at his home Chester, Va., suffering from a brok ankle sustained by a fall while on h grounds in the Virginia mountains. had to be carried for two miles befo

railroad station could be reached. adquarters were visited last week by Goldbloom, of the Federal Tobacco , a distributor of Bayuk products in Pittsburgh district.

Samuel Magen, long engaged in the ail tobacco business in this city, has ed the store at the southwest corner Tenth and Arch streets.

York County News

ORK,. Pa., Sept. 10.—Charles E. ckinger, son of Mrs. Ellen Block- r, senior member of the firm of C. N. eman & Co., cigar manufacturers, . Lion, died September 4 of uraemic oning. He was stricken the evening re and fell over unconscious in the l at his home. The deceased was 41 rs old and leaves the widow; a sister, . C. N. Foreman, and a foster sister, . Charles Reichard, all of Red Lion. consequence of Mr. Blockinger's h, the Foreman factories in the ty were closed four days.

Filmot Raub, cigar manufacturer, lastown, met with a peculiar accident ntly, as a result of which he sustained adly lacerated right eye. Mr. Raub removing the bung from a barrel n it suddenly shot into the air, strik- his glasses, the fragments of which into his eye. A York eye specialist is attending Mr. Raub states he will lose the sight of the eye.

he employes of the A. C. Frey Cigar of Red Lion, were given an outing ntly at Long Level.

Burley Elections

EXINGTON, Ky., Sept. 9.—The 90,000 wers of Burley tobacco in the states Kentucky, Ohio, Indiana, West Vir- a and Tennessee, who are members of Burley Tobacco Growers' Co- rative Association will go to the polls ne various county seats of these states rday, September 15, and elect dele- s to district conventions, which in will elect directors of the associa- for the ensuing year.

he election will be held between the rs of 8 a. m. and 4 p. m. and grow- need not be present in person or at polls to vote, but may send their bal- to the election officers, who were cted at mass meeting September 1, or l the ballots to these officers.

he election next Saturday is the third be held by the association. In the election, in the Fall of 1921, shortly r the association was organized, a ot was mailed to each member of the ciation. This, however, was found expensive method of holding the elec- and it was not followed in the elec- of 1922, nor this year, but every r who sends for a ballot to the elec- officers, either by mail or through a senger, will receive a ballot.

here are twenty-two directors to elect he district convention which will be Monday, September 17. Except in w of the districts, the present di- ors of the association are likely to be rned unopposed. The twenty-two en will elect the officers, including e directors-at-large, at the first meet- of the new board October 3.

he first year of its operation the Bur- Tobacco Growers' Co-operative As- ation sold for its members about 000,000 pounds of tobacco at an av- e of about 21 cents a pound. The nd year it sold 163,000,000 pounds at dvance estimated at 7 cents a pound the 1921 crop sales, and has on hand t 37,000,000 pounds of the 1922 crop ld, constituting the best grades of the crop. About 80,000,000 pounds, it eported by warehouses and state de- ments, were marketed by growers members of the association in 1922. The previous year these outside growers sold 57,000,000 pounds.

Tennessee and Missouri growers will be represented by a delegate in the new board of directors until such time as the by-laws of the association can be so changed as to permit of the election of a director for each of these states. Four eastern Ohio counties which joined the association this year will not hold elections, as the representation is based on the amount of tobacco delivered in the previous year, each county being permitted to send a delegate for each million pounds or major fraction of a million pounds delivered to the association.—PORTER.

Co-ops to Get Second Payment

HOPKINSVILLE, Ky., Sept. 8.—A second payment of approximately $850,000 will be distributed to the Green River members of the Dark Tobacco Growers' Co-operative Association as soon as the checks can be made up in the headquarters office. This announcement was made following a meeting of the Executive Committee which decided that a payment of this size, 40% of the first distribution, could be made.

The Green River District is the only one which has not received a second distribution of funds this summer. The One Sucker growers received their second allotment on May 15, and payments to the Stemming and Dark Fired Districts followed on July 15 and 30 respectively.

At the last meeting of the Board of Directors, Charles A. Rogers of Owensboro pointed out the need of funds in Daviess County and asked that the question of a second payment be considered. The Board then referred the matter to the Executive Committee with power to act. There are approximately 10,000 members of the Pool in the Green River District.

"Turkish" Tobacco Outlook

WASHINGTON, D. C., Sept. 10.—In a report to the Department of Commerce from Vice Consul Corafa at Athens, he stated that on account of the arrival of refugees, estimated to be about 150,000, from various tobacco producing districts, who have been distributed throughout Greece, Macedonia, the Greek Archipelago, and the Peloponesus tobacco producing districts, the tobacco crop this year is estimated to yield about 183,115,350 pounds. This is an increase in production of more than 70,000,000 pounds over the highest yield ever before reached. The increase has also been due to favorable weather conditions and advantageous marketing prices. The conditions of the growing crop are excellent, but the success of the crop depends on sufficient rainfall during the next three months.

The production of Greece for 1920, 1921 and 1922 was 69,849,565 pounds, 49,863,240 pounds and 38,936,700 pounds, respectively. It is probable, however, that with the exodus of such a large number of the tobacco growing population from other countries of Southeastern Europe, the production in these respective countries will show a decline for the present year and there will not be as large a crop of the so-called Turkish tobacco as a whole as the report from Greece would indicate.

According to a subsequent report from C. E. Dickerson, clerk to the Trade Commissioner at Athens, the Ministry of National Economy is apprehensive regarding the successful marketing of the present crop of tobacco, and measures are being considered for the protection of the tobacco trade in order to circumvent a crisis in the marketing of tobacco such as obtained in the market for currents during the past season.—LAMM.

What the Uniform Sales Act Is

A correspondent suggests that I write something about the Uniform Sales Act. It is a long and minutely detailed statute covering every phase of the sale of merchandise, having seventy-nine sections. Of course, I could not go very far into it within the limits of an article like this, but may be able to say something which will make the subject more familiar than it was before.

The Uniform Sales Act is one of a group of uniform acts bearing on business which a national organization of commercial men and lawyers is asking all the States to enact in order to make uniform the laws of the different States. The uniform partnership act is another of the group, and the uniform negotiable instruments act is a third.

All business houses who do business in more than one State will understand the enormous benefit that ensues when the law of all those States is uniform. This has not been the case until recent years, and in consequence various questions of law have many times arisen, such as (1) under the laws of what State was the contract really executed; (2) if the contract was made in one State, to be performed in another, and the laws of the States are different, which law governs? These questions arise in connection with all phases of sales: whether there was a legal contract, binding both parties, in the beginning; when delivery took place; what warranty was given; sellers' or buyers' liability in case of breach, measure of damage in case of breach, and a great variety of other questions. Not long ago I had a case involving the legality of a promissory note, in which I was compelled to search the law of four States, one of the parties having lived in each for a time, and the laws of each differing from all the others.

You can see how the situation is simplified by having all the States pass the same law. Naturally, questions will arise under the uniform statute also, but these will be limited to the legal questions arising out of the merits of the transaction. Nobody has to spend time finding out what law applies, and all the questions growing out of such difficulty are eliminated.

The Uniform Sales Act I regard as the most useful of all the uniform statutes, because it affects more transactions. So far as most of the twenty-six States in which it is in force are concerned, it embodies nothing radically new, because most of its provisions embody the weight of opinion as it existed before. Its importance lies in the fact that it represents a complete legal code for buying and selling merchandise, comprehensive enough to answer practically every question of law which can arise in sales transactions.

As I have said there are seventy-nine sections, and I could not even give their headings here. Generally speaking, however, they cover the making of a contract of sale, what the law is when goods sold are destroyed before delivery, definition of express warranty, meaning of the different kinds of warranties, sale by sample, when property in the goods passes to buyer, how to reserve title when you ship the goods, who has the risk of loss during the shipment, creditor's rights against sold goods in seller's possession, passing bills of lading, etc., delivery acceptance, delivery of the wrong quantity, delivering on installments, right to examine the goods, what constitutes acceptance, buyer's liability toward goods which he has rejected, remedies of an unpaid seller, when the right of lien can be exercised, stopping goods in transit, reselling goods after rejection, action for damages when the buyer refuses to take, action for failure to deliver, remedies for breach of warranty, etc. These are the high spots of the act.

One of the most important provisions in it is section 4, which is important enough to reproduce verbatim:

"Section 4. First, A contract to sell or a sale of any goods or choses in action of the value of $500 or upwards shall not be enforceable by action unless the buyer shall accept part of the goods or choses in action so contracted to be sold or sold and actually receive the same, or give something in earnest to bind the contract or in part payment, or unless some note or memorandum in writing of the contract or sale be signed by the party to be charged or his agent in that behalf."

This provision was practically lifted from the old statute of frauds as it is called which in some form is in force in all the States so far as I know. The statute of frauds comes to us from England and covers what contracts, in order to prevent fraud, must be in writing. Contracts for the sale of personal property above a certain amount (this varies in the different States) must be in writing if not partly executed. Taking this provision from the decidedly un-uniform statutes of frauds and putting it in the Uniform Sales Act is one of the most useful things the latter act does.

Section 4, above set forth, is incredibly neglected by business men of all classes. They do not usually look ahead to see what their position will be if the other party attempts to repudiate the contract. Contracts partly executed by delivery and acceptance of the goods, or by partial payment, are usually enforced easily enough, but if there has been no delivery, acceptance or payment, the question is, "was there a sufficient note or memorandum signed by the party to be charged," who is in every case the party who is trying to get out of the contract. Such a note doesn't have to be signed by both parties, but it must contain all the terms of the deal.

The Uniform Sales Act is in force in the following States: Alaska, Arizona, Connecticut, Idaho, Illinois, Iowa, Rhode Island, Tennessee, Wisconsin, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Nebraska, South Dakota, Utah, Wyoming, Nevada, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Vermont.—(*Copyright, 1923, by Elton J. Buckley.*)

Tobacco Comes High

Dr. J. J. Galloway writes from Tampico, Mexico, that Prince Albert tobacco sells for 40 cents a can, while the price in the States is 15 cents the can. Mrs. J. J. Galloway thought she would save money for her husband, who is investigating oil prospects down there for the International Petroleum Company. She purchased a dozen cans at $1.80, carefully wrapped them, paid eighth zone parcel post rates of 50 cents and attached a custom tag (the tag being furnished by the postmaster of Indianapolis) as required by the Mexican law, and started the tobacco on its way. In a few weeks she received word from her husband that the tobacco arrived with custom charges of $5.30 charged against the package. This brought the total cost up to $7.50 for the dozen cans, or $2.70 more than the tobacco would have cost in Mexico.—*Newport (Ind.) Hoosier State.*

Real Democracy

The purchases made by a large, heavy-set woman apparently of some property and social position, in a small Gratiot avenue shop the other day, go to prove that you never can tell. She asked firmly for a package of a well-known brand of chewing tobacco. When the shop dealer was unable to supply it, she unhesitatingly called for another brand, threw it into her shopping basket and started to leave. Then she spied a pile of magazines and asked for a certain radio publication. This, too, was unavailable, so she took a substitute. The tobacco may have been for her husband and the radio magazine for her son, but spectators watched her purchases with interest and surprise.—*Detroit News.*

Returns From the South

F. M. Arguimbau, vice-president of the American Sumatra Tobacco Co., Inc., has returned from Florida, where he has been superintending the packing of tobacco for his corporation.

Wisconsin Tobacco Hit By a Devastating Frost

Growers Suffer from Worst Calamity to Crops in History of State—Direct Financial Loss Estimated at $4,000,000—In Various Sections Tobacco Is Totally Ruined.

EDGERTON, Wis., Sept. 16.—The worst lamity in all the history of agriculture the fair state of Wisconsin struck the bacco and the corn crops in the form two heavy and killing frosts in suc- ssion. The frost of the night of Sep- mber 12 was general and destructive. he thermometer registered as low as 28 egrees, generally, in the southern sec- ons. Many crops in high or sheltered aces escaped, by reason of their loca- on, and by reason of a gentle wind that evailed that night.

On the night of the 13th, however, the ind was absent, and the mercury in the ermometer hit as low as 22 degrees ound Portage in the south, and even wer in many localities in the north, id practically nothing escaped the cold. o date, only a few crops next to Lake oshkonong are known to have escaped

In the north, about 60 per cent of the op was still in the fields, it is popularly timated. Nothing escaped. By far the eater part of the crop will not even salvaged for stemming purposes.

In the south, also, whole localities will se everything. Seventy-five per cent of e southern crop was still in the fields. he writer, the pool officials, and many her operators agree that 35 per cent the entire acreage planted this year ill be a total loss. This estimate of the ate's loss may be a little conservative. Two or three weeks ago, the southern op promised to be the best in the history the state. Now it is a pitiful sight. eorge Gary, state head of the P. Loril- rd Co., makes as a conservative estimate at the loss in money will be about 1,000,000.

Members of the trade are being vamped with requests for advice. Op- ators do not agree as to what may be lvaged. Most of them advise the grow- s to strip off the four or five blackest aves from the top of plants, and let it and a few days, and take a chance and rvest it. Mr. Gary announced that a ivate crop of his, that he is growing, which 21 acres was out in the weather, ill be plowed under.

On the high ground, many of the under aves of plants are still green, but are oroughly chilled, and rather limp. hese crops will be harvested, and at- mpts will be made to cure them out as emming.

The thunder-struck inhabitants are not t out of their daze. Many growers in ane County, particularly, have only had ie profitable crop in three or four years. will about finish them. The local res and banks will be hard hit. Work- s in the warehouse sections realize that hard winter awaits them. The frosts d all the mercilessness of an earth- ake.

At different towns, the factories let off l their men, and they worked long into e night to salvage the crop. The wagon mpany at Stoughton, alone, sent out ur hundred men Thursday, but that ant only about a hundred acres saved t of thousands.

Dane County reports that what was left out after the rush on Thursday will be a total loss. The frost blackened entire plants way down to the ground.

Half of the 25 or 30 per cent of the crop that was previously shedded was washed out, slippery, green tobacco, and the stemming content in it will run very high.

The Janesville *Gazette* quoted one grower as saying:

"Such is the gamble of the farmer. It cost me about a hundred dollars an acre to raise this crop. Just at the finish, 48 hours of weather ruined a whole season's work, and cuts profits into a loss. This is the last tobacco I will ever plant. Dairy cows for me."

That will be about enough of the frost. The writer hates to talk about it any more. Seventy-five per cent of the state's binders have gone by the board, north and south.

There is a large amount of black rot showing up in the sampling of the 1922 crop in cases. It is rather widespread, but the poundage affected in the marked cases is slight.

Sweeney and others are riding hard after the shedded southern, but the farmers have such enhanced ideas of the value of the saved remnant of the crop, that very few crops have been bought. It is rumored that 30 cents has been offered for early shedded southern.

Mr. Rose, of Rose & Wobbe, is in the southern sections today.—BADGER.

Picture of Destruction In Wisconsin

MADISON, Wis., Sept. 15.—I think I have just witnessed the most cruel sight I have ever seen, driving through the tobacco sections the past three days. A crop of tobacco which was considered the *best* binder crop grown within more than 20 years, has been 80 per cent destroyed by the frost. The fields are black; very little of the tobacco can be harvested, and even then, it could only be used for stemming, if indeed it is good for anything at all.

I never saw such a calamity. Some of the early tobacco was harvested, but the amount safely housed is quite limited.

The firms that have a stock of old tobacco will come out well, but the quantity they hold is very small.

The loss from frost in this section is estimated at about $4,000,000—R. T. TANNER.

Cullman's Annual Clambake a Big Success

Some 150 employes of Cullman Bros., Inc., 161 Front street, New York, growers of Connecticut shade, took part in the Annual Clambake held last Saturday on the Cullman farm, at Simsbury, Conn., and participated in a really enjoyable event, in which the harvesting of the wonderful 1923 Connecticut crop was suitably celebrated.

Joseph Cullman, Sr., Joseph Cullman, Jr., Harry Rothschild, and L. F. Muller, of Cullman Bros., Inc., were present, and contributed to the success of the occasion. W. J. Hayes filled the role of "Big Chief."

Among the distinguished guests were: Ben Lichty, president of Otto Eisenlohr & Bros., Inc.; William Waterman, president of Waitt & Bond; Fred B. Griffin, general manager of the Connecticut Valley Tobacco Association; Fred B. Jack, of the Imperial Tobacco Co., of Great Britain and Canada, Ltd.; Henry Buell, of the General Cigar Co., Inc.; Joseph Diaz, president of the Preferred Havana Tobacco Co., and John Rogers, of Otto Eisenlohr & Bros., Inc.

Record Auction Sales at Wilson

(Special Telegram to TOBACCO)

WILSON, N. C., Sept. 18.—The supervisor of sales reports that 1,065,380 pounds of tobacco was sold here yesterday at Wilson's six auction houses; the largest total ever sold here in one day. The average price was $19.91 per hundred.

Today's sales aggregate more than 900,000 pounds.—MCFARLAND.

Broadleaf Prices Set

HARTFORD, Conn., Sept. 18.—The Connecticut Valley Tobacco Association, at a special meeting yesterday, fixed the following prices on the 1922 crop of Broadleaf tobacco.

Frost Hurts Ohio Crop

DAYTON, O., Sept. 14.—Tobacco growers of the Miami Valley sustained a severe loss last night, due to a killing frost, in the opinion of County Farm Agent Cunningham, who is making a tour of inspection. Temperature in Dayton was down to 37 degrees during the night.

Keystone State Trading Brisk

Ray C. Clark, of D. Dreux, Inc., 136 Water street, New York, importers of Sumatra and Java leaf tobacco, is in Pennsylvania this week, and reports that business in that territory is quite brisk.

Old Issues Wanted

Back Numbers of TOBACCO from Volume 1 to Volume 21, both inclusive, are urgently required, and readers possessing old issues which they are willing to dispose of, are requested to communicate with the Circulation Department of TOBACCO at 10 East 39th street, New York, and to state at what price they are willing to part with their copies.

Market Observations

By A. LERT

There was only one requisite in the leaf tobacco business for 1923 that was necessary to ease up the situation which has existed for a great many years in leaf circles, and that was large and healthy crops of tobacco. Up to the 13th of the month every indication was that there would be large and healthy crops in both the states of Ohio and Wisconsin.

The frost in Wisconsin on the 13th and 14th of this month, and the frost in Ohio on the 14th, mean a great deal more than the average freeze in a cigar leaf state. With practically no carry-over in either packers' or manufacturers' hands of either binder or filler tobaccos there is bound to be a skyrocketing of prices and speculation that is unhealthy for all concerned.

What the industry needed more than anything else was not one big crop of tobacco in every state but successive crops which would leave a carry-over and bring prices down to a fairly normal and sane basis.

For cigar purposes Ohio and Wisconsin crops on the whole can be disregarded for the year 1923 as already a good proportion of the crop is being contracted for for stemming purposes and is being stripped accordingly.

Connecticut Crop Safe

The Connecticut crop is safe and finished, and with a large crop, grown and cured under ideal conditions, it may afford some relief to the disaster in Wisconsin. The majority of the Pennsylvania crop, with a few more days, will also be shedded, but it would not surprise the writer to see terrific prices paid in the near future for the better crops.

The Havana situation remains about the same with prices prevailing that make it more than difficult to divide the tobacco into cigars at existing prices and show the manufacturers a profit. Porto Rico is moving freely, and all wrapper tobaccos are being picked over in lieu more or less of unfavorable reports that have been received from time to time regarding the 1923 crops in the Dutch East Indies.

The trade on the whole is looking forward with more than general interest to the offering, at the end of this month, of the new Connecticut by the Association, and due to the limited poundage of the 1922 crop, as well as the scarcity of desirable binder tobaccos it would not be surprising to see within a short period the Connecticut market absolutely bare of Broad Leaf binders.

The cigar business has kept up its rapid strides during the last week or so, but naturally there is a general apprehension throughout the trade as to the possibility of being able to manufacture cigars for a much longer period with replacement values of raw material on hand probably at a decidedly higher level than the stocks being consumed at present.

New York Leaf Dealers Add to Japanese Relief Fund

With characteristic generosity, the New York Leaf Tobacco market lost no time in responding to the Red Cross appeal for Japanese relief, to the tune of

An Unqualified Guarantee!!

American Tob. Co. Gives Freely

The American Tobacco Co., Inc., has ntributed $5,000 to the Japanese Relief nd, it has been announced.

John M. Alvarez

John M. Alvarez, of the old-estab-hed firm of Y. Pendas & Alvarez, ssed away last week at his summer sidence in Sayville, L. I., aged 52. He as the son of Miguel Alvarez, who, me 50 years ago, in company with sidro Pendas, started the firm of Y. ndas & Alvarez, which afterward be-me one of the leading clear Havana gar houses. José, Don and Miguel ndas were his cousins.

Mr. Alvarez, together with the three ns of the elder Pendas, in due course came affiliated with the firm as one of executives and traveling representa-es and was a partner and sales rep-sentative up to the liquidation of the m a few years ago.

Mr. Alvarez was widely known roughout the tobacco industry and pos-sed a host of friends in the trade. He survived by his widow and four chil-n.

Covering the West

W. P. Miller, of the American Su-tra Tobacco Co., Inc., 131 Water eet, New York, is covering the West-n territory with marked success.

The Connecticut Valley Tobacco Crop Excellent

WAKEFIELD, Mass., Sept. 15.—The farmers of the Connecticut Valley have practically finished harvesting the best crop of tobacco for several years. The present crop promises much better quality and yields than previous seasons. Massachusetts expects a crop of 16,530,000 pounds, compared with 11,925,000 pounds last year and the five-year average of 14,467,000 pounds. Connecticut prospects indicate a crop of 48,165,000 pounds, compared with 35,000,000 pounds last year and the five-year average of 40,195,000 pounds. The Connecticut Valley total is 64,695,000 pounds, 38.4 per cent greater than last year's crop and 18.3 per cent above the five-year average. At present good prices are prevailing for the crop.

The prospects in competing areas shown in the table below is for a crop of 185,990,000 pounds, compared with 158,400 pounds last year and the five-year average of 194,670,000 pounds. In those States the crop is 17.4 per cent above last year's, by 4.5 per cent below the five-year average. Outside the New-England States, Ohio and Florida have had the most favorable season.

—V. A. SAUNDERS and C. D. STEVENS, Statisticians for the New England Crop Reporting Service.

*Note:—This forecast, as of September 1, was, of course, made before the devastating frost which visited the Badger state, September 12.

Meyer & Mendelsohn Harvest Record Crop

Meyer & Mendelsohn, of 169 Water street, New York, and 651 Windsor street, Hartford, Conn., widely known throughout the country as expert growers and packers of shade and sun grown tobacco, are harvesting a crop of more than 1,000 acres of Broadleaf and Havana seed.

To a representative of TOBACCO, I. M. Jacoby, vice-president and treasurer of the company, declared that this year's crop is the finest in his experience, and that the tobacco was going into the sheds in as perfect a condition as possible.

On the Meyer & Mendelsohn plantations are shown, unmistakably, what can be accomplished by scientific methods, and the acreage comprises some of the most desirable tobacco land in the Connecticut Valley.

The Meyer & Mendelsohn packing house at Hartford is unsurpassed. In completeness of facilities and in correctness of methods, no tobacco warehouse in Connecticut can make a better showing. Special care, scrupulous cleanliness, up-to-dateness in equipment and procedure, unstinted expenditure to make sure that the tobacco will be exactly "right," every aid that experience can suggest or science provide, beyond question, is there. No growers or packers uphold their reputation more proudly.

The Meyer & Mendelsohn organization gives employment to more than 2,000 people during eight months of the year and is one of the most important factors in the Connecticut Valley tobacco industry.

Harvesting 1923 crop of Broadleaf grown by Meyer & Mendelsohn, Inc., on their Suffield, Conn., plantation

Five Cent Cigar Gets A "Jolt" by Jack Frost

Now that the 5-cent cigar is back—it's going again.

Or Jack Frost will drive it out and up.

This was the verdict of local cigar manufacturers on Friday after reports of recent frost damage to the Wisconsin tobacco crop had been received.

While tobacco prices were rapidly advancing before the frost, the cold spell will send them back to war prices, some manufacturers believe.

Douglas Phillip of the Mi Lola Cigar Company, who returned on Thursday from a trip through the tobacco country, expressed alarm at the damage inflicted on this season's crop by the frost of Wednesday night.

"The crop was only damaged in spots from the frost Wednesday night, however," Mr. Phillip said. "The heavier frost Thursday will make conditions doubly bad. It will undoubtedly have a decided effect on prices of cheaper cigars. The only thing to be thankful for is that part of the crop, at least, has been harvested."

Robert Lindman, manager of the National Tobacco Company, declared that price raising was the only way out for both farmer and manufacturer.

"Tobacco prices are going higher every day," he said. "And the frost will add force to their rise. The situation is especially bad for the farmer. The manufacturer is almost unable to buy tobacco at present high prices."

Charles R. Wurtz, manufacturer of special brand cigars, stated that he believed a great portion of the crop is already harvested and that the frost will have little or no effect on cigar prices.

Fred Weil of the Fred Weil Cigar Company said he believed that the Wisconsin tobacco crop had been practically ruined. Other dealers and manufacturers expressed similar opinions.—Milwaukee *Sentinel*.

Studies Southern Conditions

John L. Fielding, of Cullman Bros., Inc., 161 Front street, New York, has arrived in Tampa, and plans to make a close study of conditions in the South.

Southern Grower Visits Gotham

D. A. Shaw, veteran grower, of Quincy, Fla., was a welcome visitor to the New York leaf tobacco market last week.

A Successful Northern Trip

C. L. Meister, of Arthur Bornholdt & Co., of 139 Front street, New York, is visiting the principal cigar manufacturers in New England and Canada and booking many orders for Sumatra and Java leaf.

The Burley Association Elects Directors

(*Special Telegram to* TOBACCO)

LEXINGTON, Ky., Sept. 17.—District conventions of delegates chosen by the members of the Burley Tobacco Growers' Co-operative Association in elections Saturday, met today in the twenty-two districts of the Burley territory of Kentucky, Ohio, Indiana, West Virginia and Tennessee and elected directors of the association for the ensuing year. The association will handle the coming season the tobacco crops of more than ninety thousand members.

The directors elected today, by districts, were:

First district—Fayette county, Ky., James C. Stone, Lexington.

Second district—Bourbon county, Ky., Ed. Burke, Paris.

Third district—Shelny county, Ky., no election.

Fourth district—Mason county, Ky., James N. Kehoe, Maysville.

Fifth district—Scott county, Ky., R. T. Offut, Georgetown.

Sixth district—State of Ohio, George Loth, Aberdeen.

Seventh district—State of Indiana, W. D. Protsman, Vevay.

Eighth district—Franklin and Woodford counties, Ky., Bedford Macklin, Frankfort.

Ninth district—Carroll, Gallatin and Owen counties, Ky., Perry B. Gaines, Carrollton.

Tenth district—Henry and Trimble counties, Ky., H. K. Bourne, Newcastle.

Eleventh district—Boone, Campbell, Kenton and Grant counties, Ky., Dawson Chambers, Walton, R. F. D.

Twelfth district—Harrison and Pendleton counties, Ky., Rev. J. R. Jones, Cynthiana.

Thirteenth district—Bracken, Nicholas and Robertson counties, Ky., Chambers Perry, Mt. Olivet.

Fourteenth district—Bath, Morgan, Menifee and Montgomery counties, Ky., Clark B. Patterson, Mt. Sterling.

Fifteenth district—Boyd, Carter, Elliott, Fleming, Greenup, Lawrence, Lewis and Rowan counties, Ky., J. H. Housley, Flemingsburgh.

Sixteenth district—Garrard, Jessamine, Lincoln, Pulaski, Wayne and Russell counties, Ky., J. H. Woods, Stanford.

Seventeenth district—Boyle, Mercer and Casey counties, Ky., Bush W. Allin, Harrodsburg.

Eighteenth district—Adair, Anderson, Green, Marion, Taylor and Washington counties, Ky., Judge D. H. Thurman, Springfield.

Nineteenth district—Clark, Jackson, Laurel, Madison, Powell, Rockcastle, Estill, Clay, Lee and Owsley counties, Ky., R. P. Taylor, Winchester.

Twentieth district—Jefferson, Nelson, Spencer, Oldham and Larue counties, Ky., T. B. McMicken, Bloomfield.

Twenty-first district—Barren, Breckinridge, Cumberland, Grayson, Hardin, Hart, Meade, Metcalfe, Monroe, Warren, Ballard, Butler, Caldwell, Daviess, Edmonson, Hancock, Logan, Marshall, Ohio and Todd counties, Ky., J. D. Craddock, Munfordville.

Twenty-second district—State of West Virginia, Hon. Elliott Northcott, Glenwood, W. Va.

Inspects Local Market

Charles Hipple, of Hipple Bros., Philadelphia cigar manufacturers, made a personal inspection of the local leaf market.

Domestic Exports of Leaf Tobacco, Cigarettes and Smoking Tobacco During July, 1923

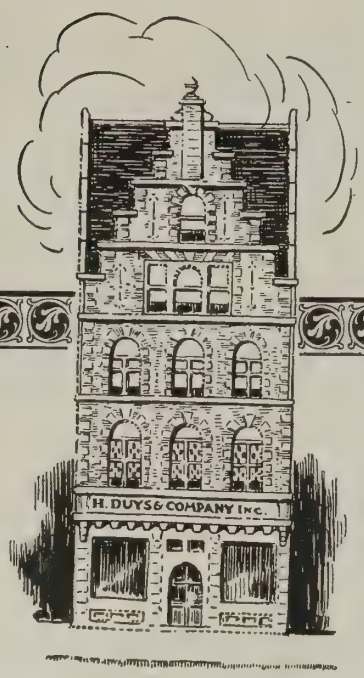
Manila Cigars Popular

Ernest J. Moss, manager of the cigar department of Frank E. Childs & Bro., Inc., of 79 Front street, New York, reports that the Manila cigar business is making wonderful headway. Next week he plans to visit Buffalo, Cleveland, Canton, Toledo, Detroit and Chicago, to spread the gospel of Germinal brands.

Kaltreider Cigar Co. Still in Active Operation

The Kaltreider Cigar Co., of Red Lion, Pa., writes to TOBACCO as follows:



"There has appeared in the York County items of your paper several times articles concerning the fact that the General Cigar Co. has leased the Kaltreider Cigar Factory in Red Lion, that they are putting on cigar makers and each time referring to the Kaltreider Cigar Factory. Now the building in question is one formerly used by D. Frank Kaltreider in the cigar business, but he has been for some time in the cigar box business, and the above will mislead some firms to think that our firm, the Kaltreider Cigar Co., has gone out of business, and we have already received some letters asking us about it. Will you kindly explain this in the York county items in your next issue?"

Bornholdt's Acquisition

Harry N. Davis, son of Fred Davis, of the New York-Tampa Cigar Co., has been appointed to the sales force of Arthur Bornholdt & Co., of 139 Front street, importers of Sumatra and Java leaf. He is to cover the Metropolitan area for his new organization.

Hitting the Western Trail

Jack Marqusee, of Julius Marqusee & Son, Inc., 141 Water street, New York, packers and dealers in all grades of seed leaf tobacco, is touring the West in the interests of his organization.

Why is it that during the past two years one out of every six cigars made in this country has been wrapped either with Sumatra or Java purchased from us?

There's a Reason---

May Change Directorate of Dark Growers' Pool

HOPKINSVILLE, Ky., Sept. 17.—Next Saturday the members of the Dark Tobacco Growers' Co-operative Association will ballot in every county in the Black Patch of Kentucky and Tennessee to elect delegates, who, in turn, will meet the following Monday and name the 23 directors who, with two directors-at-large to be named by them, will handle the association's affairs for the coming year.

For weeks the importance of these elections has been emphasized to the association members, and much interest has been shown in them. Now that the association has passed through its first year, there are naturally a lot of fault finders, but none of the criticism goes so far as to favor the breaking up of the association. On the other hand the sentiment for the continuation of the association, and to make it stronger each year and more beneficial to its members, is generally expressed. But at the same time those who claim to have found mistakes also want to correct them.

For this reason it is believed that there will be some changes made in the directorate, and by them in the list of officers and heads of departments. In the main, the officials this year have made good, but changes in a few of the places are being predicted.

The board of directors will be elected on September 24 by the delegates who are elected on September 22. In turn these directors will hold their first meeting here on October 1, and at that time they will name those who are to be actively in charge of the business. More or less politics is being played in the matter and the situation is an interesting one, but from all indications the association will continue to be in capable hands.

Another thing which has caused much criticism is the salary list. Many people claim the salaries, for the most part, have been too high, and undoubtedly there will be an effort to have these reduced. Some predict that there will be wholesale reductions, while others think the list will remain practically unchanged. These claim that the salaries are not too high if really competent men are to be secured to fill the places, and that these are the only kind which should be employed.

Membership Drive Continues

The membership campaigns in the Stemming district and the dark fire counties of Kentucky and Tennessee west of the Tennessee river, are progressing well. Acting on petitions sent in from every county in the Stemming district the board of directors granted an extension of time for closing the membership books in that district. As originally set the books were to close finally on September 15, so far as the 1923 crop was concerned. But the growers petitioned for more time on the grounds that they had been so busy with their crops and just now were in the midst of the cutting and curing season, and for this reason they had not been able to prosecute the drive as vigorously or thoroughly as they had expected to do. With their crops housed and cured, they said they planned to wage the campaign very actively. So the directors agreed to keep the time open a while longer. The date for closing is yet to be selected and announced. This is the first extension of time granted by the association since it was formed.

Clifton Rodes, chief of the field service division, announced that a total of 6,100 new contracts have been received since the summer membership campaigns were started. This is the number actually received at association headquarters and does not include the several hundred still in possession of the field workers scattered over the district. As yet no membership effort has been made in the dark fired district proper, further than that made by individual members or through the school district locals.

During the past week the association conducted firing demonstrations in a number of counties which produce dark fired tobacco. Experienced men have been sent out on this work and they have held the demonstrations in the barns of member growers in practically every neighborhood. These demonstrations are for the purpose of showing the farmers the best methods for firing their tobacco, and especially to impress upon them the necessity for heavy firing. They are also told how to handle, grade and bulk the tobacco to the best advantage. Buyers agree with association officials that better firing, handling and grading of the tobacco will cause it to grade higher and thus bring the growers a decidedly better price.—M. E. BACON.

Tobacco is Next on List

The Non-Smokers' Protective League makes its bow for recognition. It is organizing for a nationwide fight upon the "demon" tobacco. Encouraged by the success of the prohibition movement in making the country dry, at least on the law books, the nucleus of another army of crusaders has been formed. Dr. Charles G. Pease, the president, announces that the 3,000 enrolled as charter members will at once set to work to secure state and federal laws to prohibit indulgence in the weed. Says this champeen of the new cause:

"We look for a national revulsion against tobacco. We believe that this will come with the unfurling of our standards and a broadcast notice that we are in the field."

He predicts that the prohibition of tobacco will be sudden as was that of liquor. "For years there was waged a consistent campaign against strong drink, and while this seemed to make but small inroads at times, it culminated sharply in national prohibition. A tidal wave of protest against tobacco will inundate the proponents of it and will put our program into effect," he chirps.

So don't take the mild mannered Mr. Pease too lightly for he is quoting history. The first step is to band the non-smokers together; then seek laws making it a misdemeanor to smoke in public. Such an enactment would stamp the practice as being indecent and unmoral as well as illegal. It would be next in order to make it possible to condemn places where smoking is committed as nuisances, so that smoking would have to be done in the cellar.

The new movement is going to strike at the source of supply. Legislation is to be demanded prohibiting the growth, importation and sale of tobacco. Such an enactment as this would curb the smoker quite handily. Though the tippler may "make his own" out of most any decaying fruit or vegetable, tobacco culture could not be attempted in the basement.

So the non-smoker is not primarily interested in keeping his nostrils undefiled but zealously seeks to protect his brothers as well. We need a few more reforms of this sort. It is particularly desirable that those who do not smoke initiate the movement. Prohibition has planted a seed which is flowering abundantly. Every minority is inspired to make illegal that which it does not like or does not do. Personally we have never cared much for cerise neckties. Those who are in favor of a law making it a misdemeanor to wear them will display their esthetic taste and good citizenship by joining in the crusade to do away with them. By the same token the bull necks may organize to initiate laws making it illegal to display the Adam's apple. Certainly there is nothing to be said in favor of this protuberance.

Dr. Pease is both physician and dentist. Apparently he excels in neither, hence his ambition to serve humanity by taking the leadership and incidentally the shekels which come to the organizer.

He has written much against the use of coffee, tea and cocoa. He is opposed to meat eating. Yet he is quite a militant. On making a cross-country tour, he served notice upon Pullman conductors that he would use force, if need be, to restrain fellow passengers from defiling the air with tobacco fumes.

This idea is another good one. When we have prohibition of tobacco, it will become possible for the self-appointed upholders of law, to kidnap and flog offending smokers. Thus will added spice be given to our otherwise drab existence. What with all these reforms and the dramatic, if painful methods which are pursued in their enforcement in these days of "Can't, Cant and Klan," America is becoming a great place in which to live.—*Davenport (Ia.) Times.*

Read Tobacco and Keep Up-to-Date

Couldn't you use an extra $79 a year?

Wait! This means

- 15 Ford payments
- or 2 weeks vacation
- or 2 suits of clothes
- —or a radio set!

You can save $79 a year by rolling your cigarettes from "Bull" Durham.

And yet while you are saving this money, you are having THE smoke of all the world.

Do you know this about "Bull":

There is something in its fine, careful blending and manufacture, with its marvelously fragrant and distinctive flavoring and aroma that makes it a better smoke than any ready-made cigarette?

"Bull" Durham helps pay for his insurance!

Lots of men are writing us how much they save by rolling their own cigarettes. Here's Mr. W. P. Perry of The Perry Co., Detroit.

"For the past ten years I have been smoking "Bull" Durham and never gave a thought to the cost.

"I saw one of your advertisements so I decided to give it a test.

"Cigarettes cost me $9.00 a month against "Bull" Durham at $3.00 per month. This shows that $6.00 a month could be saved.

"At the end of a year I will have saved $72.00 which I will use toward my insurance. For this I am thankful to the American Tobacco Co."

Raise Charity Funds During October

intensive canvass during the month ctober of every trade in New York he purpose of raising funds to elim- the $400,000 deficit in the three and lf million dollar budget of the Fed- on for the Support of Jewish Philan- ic Societies was announced by ur Lehman, President, at a luncheon e Business Men's Council of Fed- on at the Hotel Pennsylvania, Tues- at which sixty councillors and divis- eads under whose direction the can- will be made were present. The ing was called by Percy S. Straus Felix M. Warburg, co-chairmen of Business Man's Council to crystalize s of the trade committees for comb- all the industries of New York in h Jewish business men are engaged.

To Dispense $3,500,000

Ve will be compelled to borrow funds ulfill the obligation we have made to 91 institutions maintained by Fed- on," said Mr. Lehman, "unless the essful business men of New York us raise Federation's deficit before nd of the year. We have contracted ispense three and a half millions. It ot too much to ask $400,000 more n the business men of this city, es- ally at this holiday season when it is itional for Jews all over the world to ore liberal."

To Proceed Calmly

eo Sulzberger, one of the active heads he money raising machinery of Fed- ion pointed out the necessity of rais- the present deficit without the cus- ary excitement and expense of money ing campaigns. A study has been e of the strength of all trades in New k in which Jewish men are prominent hat each might be allotted a quota mensurate with its income.

pecial mention was made of the work mplished by some of the trade com- ees which have been active during the mer. These include the committees king in food products; corrugated er products; clothing trades; cotton ds; underwear; veilings; cloaks and s; insurance; jewelry and optical ds; furs, etc.

Tobacco Trade Makes Good Showing

report from the real estate and to- o trades showed that these have al- dy raised more than fifty per cent of r quotas of $31,000 and $25,000 respec- ly.

ome of the men at the luncheon were hur Lehman, Percy S. Straus, Felix Warburg, Herman W. Block, Manny auss, David A. Ansbacher, E. Van lte, William Schiff; Z. D. Bernstein. ry F. Samstag, Samuel Blooming- e, Ben Erdman and Solomon Lowen- n, Executive Director of Federation.

Smoking on the Increase

Tobacco dealers believe that smoking is on the increase, but the use of the weed is more general in winter than in summer. During the periods of intense heat, the inveterate smoker usually cuts down his allowance, as the warmth from a cigar, pipe or cigarette only adds to one's misery. Cigarettes have had a big spurt of late years and their use is far greater than that of all other forms of tobacco combined. Pipes still have their devotees but in most cases it is only a passing fad. Pipes leave a disagreeable odor in one's apparel and the average society boy steers clear of anything of the kind. The elderly men favor pipes and the college boy usually has a briarwood in his rooms for the study hour. Chewing of tobacco is said to be declining in the cities. Snuff still has its few followers, who chew it in most instances, instead of drawing it up the nostrils as our forefathers did. The five-cent cigars are back, but their return did not appear to create much interest, as the cigarette followers continue to cling to their favorite paper-covered weed. Smoking among women is said to be slowly increasing, but this is rumor only. In the shelter of their boudoirs, it may be true that the fair sex is indulging to a greater extent than in former years, but there is also a stronger chance to the contrary. Bloomington women do not smoke in public and perhaps not a great many indulge in private. At least not many buy their cigarettes of the uptown dealers.—*Bloomington (Ill.) Pantagraph.*

Curtis in Keystone State

H. J. Curtis, of Arthur Bornholdt & Co., 139 Front street, New York, is displaying samples of fancy Sumatra and Java wrappers to the Pennsylvania cigar manufacturers, and, incidentally booking some good orders.

Hug-Proof Cigars

Former Vice-President Tom Marshall, of Indiana, told only half the truth when he remarked, "The thing this country needs most is a good five cent cigar."

If he had said "a good unbreakable cigar for ten cents," he would have come nearer the truth, and he might have had some of the credit which will accrue to James S. Long and Henry Ullman, professors of chemistry at Lehigh University, who, it is announced, have discovered a binder that will stand any rough usage.

It took a whole year of research before the chemists lit upon the process by which tobacco stems could be turned into a protective surface, between the filler and the wrapper without interfer-

entists Attending Convention "Plug" Vacant Spaces in Numerous Cigar Emporiums — Tooth "Carpenters" Brighten Business Which Had Been Dull for Weeks.

CLEVELAND, Ohio, Sept. 15.—Again ling up to its title of the "City of Conntions," Cleveland had with it this ek the convention of the American ntists' Association, ten thousand and ne odd strong. Coming at a time when ngs were quite dull, the convention ped considerably in brightening things some of the local retailers. The hostands were kept especially busy by many smokers among the tooth exctors and other proprietors of torture mbers. Conventions are always a big p, and when they come at a time when stimulus to business is needed, why y're just batting .300, that's all.

The last two weeks seemed sort of "F" weeks for the local trade. Whether was the weather, territory, whether it s, or what, is hard to tell, but the in fact remains that they were dull, y dull weeks, much too dull. Things uld go along much better now. The nmer vacation season is docketed away l the fall season is off to a start. The rt may have been slow, it is true, but powerful cars start slowly, gather up ed as they go along and finish in a irl of speed down the homestretch.

Power Calls

Jesse Powell, famed through his conction with E. A. Kline & Co. and their dalist cigar, called on the Fifth City de during the week. Lots of orders re headed factoryward as a result of . Powell's call on the local dealers.

Pipes

Harry Boston, as well, as fat, and as ial as ever, made the rounds with the ll-known W. D. C. brand of pipes and okers' supplies. All one has to say is t Mr. Boston got just as many orders he always gets, and one has said volues, for he never misses up on anybody —another good reason, because they won't let him. W. D. C. pipes are featured wherever good pipes are sold.

The Frank Line

Al. J. Haupt, representing the S. M. Frank & Co. line of pipes through this way, got in town this week and immediately proceeded to corral lots of big orders for these fine examples of the pipemaker's art. Mr. Haupt is a go-getter type of hustler and the Frank line is never far behind in anything that has to do with pipes.

A Webster Visitor

Art Fields, of the Webster Cigar Co., was a very prominent cigarist who made his headquarters in the city this last week. Websters are growing every day in fast-selling popularity. The A. D. Goodman Co., local distributors of the Webster brand, have their hands full in taking care of all the orders that persist in coming in and seeing that everybody is supplied with a fair share of them.

Much in Evidence

Ben Gottleib, Reiss-Premier Pipe Co. representative, strode into Fifth City pipe circles this week. The Reiss-Premier pipes have long been established through this way and have been maintaining the fine reputation for quality and workmanship established when they were first introduced in this market.

Baer-Wolf Clambake

All the boys at the Baer-Wolf Co. are enjoying a wonderful time at the annual clambake which is taking place this afternoon. Surprises are coming thick and fast, and it is hard to find anyone who will go home without saying he had the best time of his life.

Twin Cities Are Enjoying Good Retail Business

Minneapolis and St. Paul Dealers Stocking Up for Fall and Winter Season—Many Holiday Orders Already Placed—Variety Packings Being Offered by Tampa Factories.

MINNEAPOLIS, Minn., Sept. 15.—Retail cigar business is very good in the Twin Cities and dealers are stocking up for the fall and winter season. Many holiday orders have already been placed with the factories and merchants are going to be well supplied this year to take care of the rush. Boxes of 10 cigars in most all of the popular brands will be on sale and several Tampa clear Havana factories are offering the usual run of *Boite Nature* variety packings. The cigarette houses will have the usual holiday boxes and orders will be booked for these next month.

Well Distributed

Emerson, a Java wrapped cigar, "mild and mellow," is well placed and selling good. The Frank P. Lewis Cigar Co., of Peoria, Ill., manufacture this "perfectly blended" smoke.

Profitable Sidelines

The sale of razors and razor blades in cigar stores is good. Playing cards are also in demand. Cigar dealers are awake to the fact that side lines add to their profits.

Quarter page ads of Chesterfield cigarettes appear in the local newspapers.

"Proof of the Pudding"

El Verso continues to increase in sale. The advertising campaign put on by Diesel-Wemmer Co. has helped to bring this nationally known brand to the front very fast this year.

Forging Ahead

Herbert V. Mesick of Cuesta, Rey & Co., made his usual call and booked a large bunch of holiday orders. Cuesta-Rey is handled by all the better dealers.

Robert Bacon is one of the leaders here. Stone-Ordean-Wells Co., place it with the trade. Al Spellman, of the San Telmo Cigar Co., makers of this brand, was a recent caller here.

Met Deserved Success

Fred Suss was here recently and left with some splendid orders for S. H. Furgatch & Co. Mr. Suss is one of the best known and best liked cigar men that makes this section.

The Nathanson Cigar Co. distributes a number of popular brands. El Verso, Webster, Corina, San Felice and Antonio and Cleopatre are the featured lines.

Double-Header Representative

A noted visitor was Leo Abraham, who represents the Webster Cigar Co. and Jose Escalante Co., of Tampa. Both the Webster and Corina cigars have a large scale here.

In Good Company

The Borlum pipe from Kaufman Bros. & Bondy, is stocked by the better trade.

Moving Rapidly

Mozarts are well displayed and the Minneapolis Drug Co. is sending thousands of Mozart cigars daily to the trade.

Gaining Headway

El Producto gains in popularity, and the Stacy Co. has many window displays in and around the city.

A Cigarette Leader

George Buchingham continues to knock them cold with English Oval cigarettes. This brand of Philip Morris & Co., is one of the best sellers here in the cigarett line.

Efforts Amply Rewarded

El Roi Tan is a cigar brand that ha the call. O. J. Tiffany of the Seidenber Co. is an untiring worker, and his host o friends push El Roi Tan very strong.

To Be in Holiday Dress

Wm. Rosenfeld of Salvador Rodriguez visited the trade. Charles the great i one of the popular clear Havana seller here. As formerly the usual fancy Christmas packings of Charles the Grea will be on sale for the holidays.

Tennyson, a 10 cent smoke in glass jars is distributed by the Thomas-Elsner Co They are made by the Mazer Cigar Co of Detroit.

In Prominent Places

The E. B. Crabtree Co. reports a steady demand for Muriel Cigars. Muriel signs are seen in many of the store windows at present.

A Conspicuous Feature

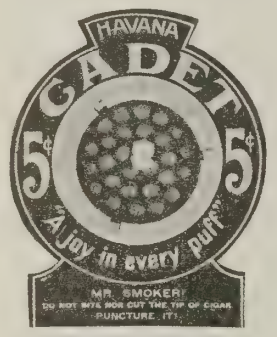
La Palina, the pioneer of Java wrapped cigars, still outsells all other brands. No dealer's stock is complete without a full run of La Palina cigars.

Keeping Up Lively Pace

Harvey Lewis, of the Consolidated Cigar Corp., was a trade visitor. His Harvester brand, long a favorite on the Minneapolis market, is still one of the leading sellers.

In Great Demand

The local General Cigar Co. branch still finds it very hard to supply the demand. The call for Robert Burns, White Owl, Van Dyck and Wm. Penn is still very heavy.

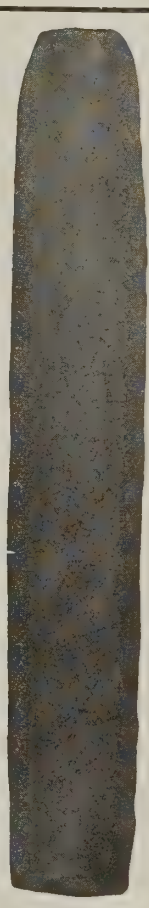


A Popular Favorite

The local United stores are featuring Ricoro cigars to much advantage. Full window displays of Ricoro cigars are shown in these stores.

Westward Bound

E. P. Oakes of the E. H. Gato Cigar Co. is due to arrive in a few days. Mr. Oakes is on his way west.



Jack Rosenberg of Eduardo Gonzalez & Co., Tampa, will be along shortly. Mr. Rosenberg has a star account here with Walter Short, Inc. He is featuring on this trip, Gonzales Fancy Tales, a long, slender, six inch cigar that retails for a dime.—H.

The Tobacco Industry in Hongkong

WASHINGTON, D. C., Sept. 18.—The cigarette manufacturing industry, which had its inception in 1908, has now grown to be one of Hongkong's most important and rapid-growing enterprises, according to American Consul Webber in a report to the Department of Commerce. An idea of its magnitude may be gained from the fact that there is over $12,000,000 of capital employed, which paid a dividend last year of 14 per cent.

The daily output of cigarettes is estimated at 30,000,000, which will probably be increased in the near future to 40 000,000. The annual imports of leaf tobacco, imported for use in the manufacture of cigarettes, amounts to about 1,500,000 pounds, of which about 40 per cent is of American origin and the rest native Chinese tobacco.

The annual exports of cigarettes from Hongkong are valued at approximately $6,000,000 and are sold throughout China and nearby markets in which Chinese are living.

The Nanyang Brothers Tobacco Co., Ltd., of Hongkong, operate the largest cigarette factory in this district, which is equipped with modern machinery obtained from Japan and the United States. This firm produces about 80 different brands of cigarettes, which retail at prices ranging from two cents to 35 cents (Hongkong currency).—LAMM.

Buys Fancy Wrappers

Sidney Fox, of the Nathan Fox Co., Chicago, recently inspected the local leaf market, and purchased a quantity of fancy wrappers for his organization.

ie San Francisco Dealers Celebrate Two Events

thday of the City Greeted With Some Peculiar Phenomena—Jewish New Year Observed by Many in the Trade—Various Indications Point to Better Business Generally.

AN FRANCISCO, Cal., Sept. 11.—It was ifornia's birthday when the moon ped across the face of the sun and d to substitute Moonshine for Cali- nia sunshine. One cigar man claims the sun and the moon had a formal gement to celebrate California's birth- . Another facetiously remarks that -day moon-shine always has been ac- table in California on birthdays. ie that as it may, Monday, Sept. 10 very generally celebrated. And in ition to this, today, Tuesday, Sept. 11, eing celebrated by quite a number he trade; for this is the Jewish New ar, and rather generally celebrated.

. Mirsky & Son report that their re- ers, as a whole are doing a very satis- tory business, and that their jobbing ie for the Summer has been moving dily forward. Their Headline is ving an especially popular seller and Garcia y Vega is growing in popular-

A new coat of paint is brightening up headquarters of D. Rinaldo & Co. twithstanding their enlargements of first of the year, they are now looking ut for more room, as all the floor ce they can possibly spare is now d with goods, waiting to be opened. e latest member of their cigar family, Imporico, is giving an excellent ac- nt of itself.

It isn't only Porto Rico cigars, how- r, that are growing in favor. Julian lmanson is back from a five weeks' cation at the hospital, and says the prise to him is the popularity of his anilla cigars. The Fighting Bobs have n good sellers, but the one gaining at rapid rate is the Alhambra. While he s from the first enjoyed a good high ss trade, he has also discovered that re is right around him an excellent e-cent trade to be developed. Since he gan giving them street-counter display, is buying Gato Keywesters, Coral ys and Muriel Midgets by the thou- nds. And in each case, especially with e Coral Key, counter display has given em a big boost.

Speaking of counter display, C. Cerin- n, proprietor of the Merritt Cigar Store, Oakland, has for some time kept on his unter a special brand of his own, which calls the Merritt, and it has built into seller that means much to his cash box.

In Strong Demand

And P. F. McArdle, manager of the akland Tobacco Co. announces that the ve cent Optimo they received was apped up greedily, and dealers are call- g for more, which they will soon be able supply. The Little Tan is another en- ying the same kind of a demand. The ptimo King, the 15c cigar, has also been creasing surprisingly. Mr. McArdle xpresses his delight at how much of a arket for 15c cigars Oakland is develop- g.

C. C. Greenman at 130 Sutter, San rancisco, expresses appreciation of the alifornia Cigarettes. They are steadily rowing in favor by those who appreciate ood cigarettes.

Handy Packages

A big seller with the General Cigar o., has been the Handy Pack assortment. his is in sizes of ten cigars each to range om 30c to $1.25. Van Dykes, Robert urns and White Owls are included in e packs. The General has secured the oncession in the new Tait restaurant in akland, which is said to be the finest in e city.

A cigar that seems to be going fine with e United Cigar Stores Co. is the Bene- ctor, a two for fifteen product.

Robert J. Blaine, in charge of the cigar epartment of Haas Bros., is making acramento, Stockton, Reno, and sur- ounding territory.

H. H. Lease, who has been in charge of e General Cigar Co. stand at the Hotel akland, has been promoted by being laced in charge of the distribution of the Sacramento-Nevada territory, with head- quarters at Sacramento.

C. Cerinich, of Oakland, was one of the fortunate members of the Chamber of Commerce boosting trip to the south. They met with royal receptions every- where. Barbecues, dances, auto trips, banquets and prune festivals made up part of the amusements of the trip.

Herbert Bibo, salesman for Sam Israel, has returned from a two weeks' auto trip through the south part of the state.

Joseph Wolf, well-known to the cigar trade of Oakland, met with a painful and somewhat serious accident the other day. He was hit by a street car in San Fran- cisco and escaped with a broken leg, a broken nose, and plenty of bruises and abrasions. At last report he was doing as well as could be expected.

The United store was recently burned out of house and home in the fire that destroyed the Philson Hotel in Stockton, but have succeeded in getting a temporary location across the street.

Algerian Growers Want an Increase in Tariff

WASHINGTON, D. C., Sept. 17.—Tobac- co growers in Algeria are insisting upon an increase in the import tariff on to- bacco from the present rate of 50 francs to 100 francs per 100 kilograms, accord- ing to a report reaching the Tobacco Di- vision of the Department of Commerce.

The growers feel that the present rate of import duty is no longer a protection to domestic production of leaf tobacco, since much of the imported tobacco comes from the United States, and with the disparity in the rate of exchange, 50 francs per 100 kilograms offers little pro- tection; on the other hand, the manu- facturers insist that increased duty will prevent the purchase of the required American and other leaf tobacco for blending with domestic tobacco, which will react unfavorably to Algerian grow- ers in that manufacturers will be obliged to reduce purchases of domestic tobacco. Algerian manufacturers urge that grow- ers begin at once to plant additional va- rieties to substitute foreign tobacco in order that foreign purchases may be ob- viated or reduced.

There has been a marked increase in tobacco production since 1913, when only 17,500 acres were devoted to tobacco cul- ture to a total acreage of about 50,000 in 1922. The prewar production of 7,000 metric tons has increased to about 24,000 metric tons in 1922. There are more than 18,000 farmers growing tobacco at the present time and about 5,000 people are employed in the factories.

Of the 24,000 tons produced in 1922, 15,217 tons were exported to France for use by the Government Monopoly. This composed about 20 per cent of France's total purchases and it is contended that if Algeria would produce varieties suit- able for blending purposes, the French Monopoly would use a much greater quantity of this Colonial tobacco.—LAMM.

Cigar Slogan Becoming International

Following the general adoption of the new cigar slogan by all branches of the cigar trade in this country, comes the announcement that Great Britain and Ireland also intend to put the slogan to work in the interest of a bigger-better cigar business.

Just what our cousins across the water think of the slogan is set forth in the following communication from *Tobacco,* the organ of the British and Colonial Tobacco Trade, published in London, just received by the T. M. A.

"Allow us to congratulate your Asso- ciation upon the excellent cigar slogan. Can you loan us an electro of the slogan the size of the white space (inside the red border) of the enclosed window bill, for a bill that tobacconists in Great Brit- ain and Ireland can exhibit in their windows?

"You will see by the enclosed window bill how inspiration crosses the ocean. That applying to cigars could usefully follow."

The window bill referred to bears the following inscription:

"Yes—we have no tobacco, cigars or cigarettes that are not in perfect condi- tion. Put us to the test now!"

This expression from across the waters, coming on the heels of the busiest week the T. M. A. has yet had in the way of meeting demands for electros of the slogan from all sections and branches of the cigar trade in this country is an excellent illustration of how the slogan is filling a long-felt want.

Practically all of the leading cigar ad- vertisers of the country have already started using the slogan in various ways, and to judge from the host of specimens bearing the slogan pouring in on the T. M. A. it would seem that the use of the slogan is by no means limited to adver- tisements in newspapers, magazines, trade papers, etc., but seemingly all branches of the trade are placing it on their letterheads, envelopes, bill heads and other forms of stationery, manufac- turers are using it on their boxes, win- dow posters and other advertising matter, jobbers are placing it on their delivery wagons, retailers are displaying it to advantage, and every other possible means is being used to popularize the slogan.

Striking White Owl Signs

Perhaps one of the best illustrations of what is being done to popularize the slogan is furnished by the large illu- minated sign recently installed by the General Cigar Company at one of the busiest spots in New York—Broadway, between 51st and 52nd streets. This sign, 20 feet high and 60 feet long, bears the cigar slogan in black and white, coupled with an advertisement of the White Owl cigar, and is placed at a point which 500,000 people are estimated to pass daily.

This company is also enclosing a slip bearing the slogan in all their Handy Packages—that is, the White Owl Handy Package of 10, Robt. Burns Invincibles Handy Package of 5, and the Van Dyck Bankers Handy Package of 10. It is estimated that at least a million of these slips will be used in this manner within the next six months.

Nor is this all, for it is announced that as soon as it can be arranged, the same company will adopt a similar design to be used as box flaps on all of their brands, which means that every box of cigars packed by the General Cigar Com- pany will contain a flap with nothing on it excepting the slogan, "After all, nothing satisfies like a good cigar."

Electros of the slogan in six different sizes are being furnished by the T. M. A. to members of the cigar trade in rea- sonable quantities, without charge, irre- spective of their membership in the T. M. A.

Requests for such electros should be addressed to the Tobacco Merchants As- sociation of the U. S., 5 Beekman St., New York, N. Y.

Paraguayan Warehouses Burn

WASHINGTON, D. C., Sept. 17.—The Paraguayan Government tobacco classi- fication warehouses, said to contain about twenty thousand bales of tobacco, were totally destroyed by fire on July 10, as a result of an attack on Asuncion by revo- lutionary forces, according to a report received by the Department of Commerce from Consul Harry Campbell at Asun- cion, Paraguay. The total loss probably amounts to a half million dollars. This is the second time within the past year that the supply of Paraguayan tobacco has been affected by the revolution. Pre- viously, the internal disorders caused a decrease in production of almost 40 per cent during 1922-23. Tobacco is the most important agricultural crop in Paraguay, and is exported in large quantities to Argentine and to the Netherlands.—LAMM.

NEW YORK, THURSDAY, SEPTEMBER 20, 1923

GLIMPSES OF LOS ANGELES

The metropolis of the west is seen at its best, naturally, by people who live in Los Angeles. There are glories that pitiable Easterners who never have been in southern California may not know.

In winter, the famed climate induces many thousands of tourists and millions of dollars to go to Los Angeles. But the biggest, most rapidly developing city on the Pacific Coast has prosperity that doesn't depend on seasons.

Los Angeles is an aggregation of activities. It has a multiplicity of important industries. The growth of business is substantial and continuous.

The city is inhabited principally by promoters, hustlers, boosters and believers. As population approaches the million mark, the progress of Los Angeles is attested by more than 200,000 automobiles. Not all of these vehicles are used daily in taking prospective buyers out to see desirable real estate.

In Los Angeles, obtainable money is represented by the gold in the sunshine, the silver lining of the cloud and the green that is seen in the landscape.

Land in the vicinity of the city isn't merely property that might be sold profitably to newcomers. Agriculturally, Los Angeles county excels every other county in the United States. North, south, east or west, not another county in the country can show farm crops equal in total value to what the farmers and fruitgrowers of Los Angeles County produce annually.

In area, one of the largest cities in the world, Los Angeles has space in which to expand. There is territory to be developed.

Los Angeles magnetizes. The city attracts. Drawn thither, in one way or another, crowds of newcomers stay and become attached. The hard worker, the loud shouter for Los Angeles probably was a resident of Iowa or Kansas sometime ago.

The city of perpetual publicity is full of hope. Courage, energy, confidence and willingness to co-operate are cardinal virtues of leading Angelenos.

If a stranger should ask: "Is the city up to date?" the immediate answer will be that Los Angeles is ahead of time.

If other cities, in envy, voice disparagement of a pushful rival, each jealous expression resembles a confession of fear. The actual harm is not of importance enough to be admitted, in the Jonathan Club. "Any knock from San Francisco is a boost for Los Angeles." That's what they all say in the citrus belt.

Among the dwellers in Los Angeles are numerous persons of world-wide popularity; "the best loved, most fascinating, highest paid" men, women and children. Confirmation of this sweeping statement may be found in every blurbing magazine devoted to motion pictures. A celebrity of filmdom may receive a salary amounting to more than a million dollars a year.

It is a scandal of Hollywood possibly that some of the immense amounts earned in front of cameras are payable partly in stage money. But a reel favorite gets enough real money to enable him or her to be a lavish spender, if so disposed.

Joyously they scintillate, verily they sparkle like stars, those heroines of screenland. They announce their altitude, they reveal their brilliancy, they proclaim their worth, by the glitter of gold, the glint of platinum, the white fire of diamonds, the red flame of rubies, the verdancy of emeralds, the lustre of sapphires, the softer shimmer of pearls or the effulgence of other jewels. Cash at command is an adjunct of greatness in the movies.

At work now, in or near Los Angeles, there are two hundred and fifty companies producing motion pictures.

Building operations in Los Angeles at present are widespread and associated with enormous expenditures. Present construction practically covers everything from skyscrapers to bungalows.

As the chief city of a region noted for oil production, Los Angeles is one of America's great petroleum markets.

Six transcontinental railroads enter Los Angeles. Besides the city boasts that it has the world's best system of urban and interurban electric railways.

Aforetime so far inland that no one then ever expected that Los Angeles would be a seaport, Los Angeles today has a harbor of tremendous importance.

Shipments from Los Angeles by sea in recent months have been so immense that even New York had reason to think that its supremacy was threatened.

The sea-borne trade of Los Angeles is not restricted to the Pacific Coast of North and South America. It reaches every ocean. It is extending constantly.

The facilities for loading, the certainty of obtaining large cargoes, the desirability of the port, the resourcefulness that acquired and improved the harbor keeps bringing to Los Angeles numerous ships that never came before.

Years ago, phthisis was a cause of migration to Los Angeles. The city was thronged with semi-invalids, frequently described as "lungers." Having or fearing tuberculosis, these unfortunate people escaped to southern California, there to receive all the aid they could from the climate. Benefitted much or cured entirely, many erstwhile "lungers" now are most energetic and sincere boosters of Los Angeles. Though for a time perhaps they worked for little, they regained strength and eventually obtained a competence. To them the flourishing city stands for about all a man could desire, this side of paradise.

The blue sky, the sunshine, the flowers, the fruit trees, the innumerable opportunities to obtain health, comfort, success and wealth in Los Angeles are attracting many middle-aged people who, in most cases, seem to be moderately well-to-do.

Going to Los Angeles, to invest their money and spend their remaining days, these new residents add much to the solid prosperity of the city. Real estate prices are steadily rising because newcomers continually show inclination and ability to buy.

In the course of events, increased capital seeks profitable employment. New enterprises appear. Additional industries are started.

Payrolls are barometers of the cigar business. Where wages are good, when workmen all are busy, cigar stores are sure to have larger sales. This is according to the rule.

Without attempting to exaggerate success as dealers report now, it can be said truly that most of the tobacconists in Los Angeles are doing well.

Wholesale grocers and drug concerns having cigar departments are placing larger orders. Jobbing houses handling tobacco products exclusively are not complaining about conditions in Los Angeles now. Expansions are taking place. Excellent holiday trade is anticipated. Factory representatives say that southern California today is "dependable territory."

In Los Angeles, the more expensive cigars and cigarettes *de luxe* are in demand. "Per capita, for cigars and cigarettes, Los Angeles spends more than any other large city does," it is claimed. Assertions of this sort are hard to verify. Complete statistics, pertaining to tobacco consumed in various cities, are not available. But there is reason to believe that the statement is true. Newly rich movie stars and the number of wealthy visitors, do strengthen the supposition.

"Good spenders" are numerous in Los Angeles. Also the city contains thousands of men who will not pay more than a nickel ordinarily for a cigar. Between those who get what they desire regardless of price, and those whose most liberal indulgence would be represented by the expenditure of a dime at a time for two smokes there is the great middle class. The average man, except on special occasions, doesn't purchase cigars costing upwards of 15 cents apiece.

In Los Angeles, each important retailer displays brands and sizes in fine variety. In different stores practically all the wrappers are exhibited. Havana, Connecticut shade-grown, Sumatra, Java, Porto Rican, Florida-Georgia shade-grown, Connecticut broadleaf and Manila are featured.

Comprising cigars made in the States, Hawaii, Porto Rico, The Philippines, Cuba, Mexico, Jamaica and Costa Rica, one salesman on his rounds through Los Angeles recently enumerated 732 brands.

American made brands of course were greatly in the majority. Manila came next, then Cuba and Porto Rico. Three Mexican brands were shown. Hawaii had two. Jamaica and Costa Rica had one each. The Costa Rican importation was confined to one box of perfectos obtained through motives of curiosity.

Manila cigars, principally in Class A, have obtained popularity in Los Angeles, very notably of late. Usually in two or more sizes, Manilas are sold steadily by nearly every cigarist in the city. According to one authority, "more than a fourth of all the cigars sold in Los Angeles are of Philippine origin." A number of retailers are handling Manilas in Classes B and C.

Though Mexican cigars, deprived of the benefit of a tariff differential, have to pay more duty than imported Havanas do, a certain demand for dark, rich Mexican elegantes causes the importation of a case or two occasionally. Two dealers explained that the call for Hawaiian cigars was small but insistent enough to make it profitable to have a few. The Jamaican cigars were forwarded from Panama to gratify the desire of a retired sea captain. One retailer in Los Angeles carries 164 brands of cigarettes. "I'm prepared to give customers what they ask for; it pays," he says.

A considerable number of retailers in Los Angeles pay very high rents. Yet such choice locations seem to be profitable. In places Los Angeles thoroughfares are so thronged that the congestion is comparable to conditions in the Loop at Chicago, or at Forty-second street and Fifth avenue, New York.

"Yes, sir, cigar business is good in Los Angeles."

PRICE FIXING

Inability to solve the problem of surplus production by price fixing is shown in a summary of various attempts to accomplish that end, published in the Kansas City *Star*. Experiments made have invariably shown that producers are influenced to plant only crops for which there is an established price, thus creating a surplus of favored commodities and a shortage of others.

A price for coffee was established by Brazil a few years ago with the hope of protecting its large coffee planters from losses due to market fluctuations. In the face of this established price, countries, which normally would not seriously contend for Brazil supremacy in this field, began to break the Brazilian hold on the market. As a result, the high price could not be maintained and the stability of the national currency was seriously threatened by the severe strains thus placed upon it.

In this country the producers of such a highly specialized product as raisins tried, through co-operative marketing, to establish a fixed price for that food, but even that attempt failed. On the other hand the same disastrous result occurred in Kentucky from an entirely different cause. A high price for White Burley tobacco caused such overplanting the following year that heavy losses were sustained by most of the growers.

The trouble with the system seems to be that centralized or co-operative selling does not create the market demand necessary to maintain high prices. It also seems that when the demand does set a high price, the following year there is such over-planting of the crop that disaster results. The answer to the politicians who hope to remedy these conditions by simple legislative measures the above facts speak forcefully. Legislation has not yet found a remedy for the problem of price maintenance.

Only by diversification has the farmer of this country made any headway, and even that does not appear to be an altogether satisfactory method. The solution is still in the future and is not unrelated to a reformation of the processes of marketing, transportation and the free intercourse of the producer with the consumer, not only at home, but abroad.

These are the things that might challenge the activities of our statesmen, in which event they might let "price-fixing" alone.—*Chattanooga (Tenn.) Times.*

OF COURSE

Even those who have become most resigned to accepting the tobacco situation in America as an inescapable evil cannot help but be startled at the disclosure made recently by the Internal Revenue Bureau that during the month of July, 1923, taxes were paid on nearly 6,000,000,000 cigarettes. This number, it appears, represents an increase of more than half a billion over July of last year. No wonder some of the State legislatures are taking steps to curtail the sale of tobacco products to minors. That is the least they can do.—*New Haven (Conn.) Union.*

And this editorial opinion is published in a State, whose farmers expect to reap a reward of more than $20,000,000 for the tobacco crop raised there this year! But, of course, Connecticut does not produce cigarette tobacco.

"TOBACCO NEXT?"

One of the speakers before the national convention of the W. C. T. U. at Columbus, O.—he was of the male persuasion—made an eloquent plea that the organization conduct its "next great fight" against tobacco. "The goal," said he, "must be legislative enactment that will protect the nation against the poison that is akin to the poison of alcohol."

Whether the dreadful fumes of tobacco do contain a poison that is akin to that of alcohol, we do not pretend to say; we leave it to the toxicological sharps. It is probable, however, that a good many users of the soothing weed will not see a great deal of resemblance between the two "poisons," and would resent any attempt to legislate tobacco-using into a crime.

Let no one, however, think that such a thing is impossible. Prohibition was thought just as impossible in 1890, say. Thirty years from now may ring the requiem over the departed Princess Nicotina, unless her devotees are better organized than were those of the late J. Barleycorn.—*Boston Post.*

CIGARETTE CONSUMPTION

Time was—and not so long ago—when the thin paper tube containing a modicum of tobacco was generally referred to as the "deadly cigarette," or the "coffin nail." Those who sought to control the personal habits of others demanded that Congress enact a law prohibiting the manufacture and sale of cigarettes. They succeeded better with alcoholic beverages.

It may surprise most persons to learn that the consumption of cigarettes in the United States during July this year amounted to about six billions. The Internal Revenue Bureau reports that taxes were paid on 5,839,707,747 during July, an increase over July of last year of almost 600,000,000.

There has not been any report that the death record has been increased by this extensive use of cigarettes. And yet it is not at all improbable that the reformers who enthuse over the Volstead act will make a crusade against cigarettes.

In countries where the cigarette has been in general use for a century or more, the physical status of the inhabitants has not deteriorated. As the best cigarettes in the world are made in America, the increase in their consumption in the United States will not cause alarm except to those who see danger in anything that does not meet with their personal notions of right living.—*Albany (N. Y.) Journal.*

Schulte Earnings Increase

"We estimate our earnings from the Schulte stores will be 15 per cent better during the last six months than they were during the first six," said David A. Schulte, president of the Schulte Retail Stores Corporation and Park & Tilford Co., sailing on Cunarder *Aquitania* for a month's business trip to Europe. Net in first six months of 1923 after charges but before federal taxes was $2,000,000.

"The first two months of this quarter have already justified that estimate. We will follow a conservative policy and for the present there will be no change in the dividend rate.

"I am going over in the interest of Park & Tilford to establish foreign connections in order that we may have exclusive agencies in this country for the distribution of certain foreign products through Park & Tilford. I will probably make more connections in France than in England.

"It is our aim to put the Park & Tilford lines all over this country through jobbers. We intend to look after the wholesale business more than the retail end. Later on, at certain centers throughout the country, we will establish retail stores which will act as advertising agencies for the distribution of the Park & Tilford wholesale products."

bacco Products Helped by Dividend Increase

: is estimated that at the present time, ıacco Products Corporation through ıted Retail Stores controls approxi- ely 90 per cent of the common stock United Cigar Stores Co. Recent ad- cement of the dividend rate by United ar Stores from 8 per cent to 12 per annually should give Tobacco Pro- ts Corporation an additional $1,180,000 ually.

ıssuming that the 12 per cent dividend maintained on the United common ck, Tobacco Products should receive ıl annual revenue on its 90 per cent dings of the $32,866,000 of approxi- tely $3,400,000. This compares with ıl net earnings in 1922 before Federal es of $5,588,000 coming from all rces. On the basis of the increased rating revenue and dividends this r, Tobacco Products Corporation ould be able to attain previous estimates earnings of approximately $10 a share the 450,425 shares of common stock, er dividends on the preferred and ıss A cumulative common stock, pre- usly estimated as this year's earning wer by the corporation.

For the six months ended June 30, last, bacco Products reported net earnings sources $2,542,203 compared with 203,557 for the corresponding period a year ago.

Tobacco Products does not segregate ual earnings from operation from se received in the form of dividends. ily late approximation of the ratio of ual earnings to those received in the m of dividends is for the four months ded April 30, last, when of approxi- ate net of $2,000,000, $970,000 was from erations and the balance in the form of vidends.

Both operating earnings and dividend yments to the corporation in the last lf of the year will naturally exceed e rate maintained in the first half.— *ily Financial America.*

Manhattans Going Strong

A cigar that is steadily growing in vor, especially in the Metropolitan District, is the Manhattan cigar, manufactured by the Central Cigar Mfg. Co., of 505-511 Canal street, New York. This popular brand is a Sumatra wrapped, Havana filled cigar, and is made in seven popular shapes and sizes. Manhattans retail at from 10 cents to three for 50 cents.

Error in One Way

The Burley Tobacco Growers' Co-operative Association made an error last week that is bound to be amusing to a number of newspaper men in western Kentucky. We don't like to keep a good joke from our readers, so here it is:

The Burley Association has a very active publicity organization for the purpose of furnishing publishers all over the state *free* news matter about their association. Well, for many months we west Kentucky publishers have been getting *free* publicity regularly from this organization, and it usually comes under a two-cent postage stamp, too. Considerable expense attached to this, for there is a bunch of newspapers down in this end of the state to mail the stuff to.

But last week something different came out. We received an order for a paid advertisement from the Burley Tobacco Growers' Co-operative Association, with instructions to render bill for same. And we printed it.

Before the ink had hardly had time to dry on that ad we got a letter from the Burley people telling us of their mistake, that they didn't intend to send the ad at all; that there wasn't a chance for it to do them any good at all; that they would pay us but their money would just be wasted, so to speak. Quite a few other west Kentucky newspapers evidently received the same kind of a letter, because they printed the ad too.

Now what do you think of that? After asking us for months and months to please publish some of their stuff for them, they turn right around and tell us that it would not have been worth a plugged nickel.

There's always a difference between getting something for nothing and having to pay for it.—*Dawson Springs (Ky.) Progress.*

The Fight, Fast and Furious for Trade Up-St

Even Manholes Are Smoking—Lil' Drops of Falk, Not W —And Grains from Yon Desert—Ole Owl, New Oa Sparring at Spa Stopped—Where Is Them Such F marks?—Shine 'Em Up, Sir—Now What Does That Sy My Children?

New York State Capitol District.
Fight Week, 1923.

"And, as I was telling you, Sam," went on Jim Stubb, still describing the diversion of one Dempsey with Senor Luis Angel Montezuma Firpo, which Jim attended as the accredited representative o' the Hot Chair Club for Stubb & Ash, Inc., "this feud Firpo had over the gate receipts with jealous Jack got so warm at the middle o' the first round that the athelete o' the Andes was hitting the canvas almost so fast as you strike that penny key on the cash box for match sales!"

"So that should be what yuh paid it $3.30 for, hey?" glared Sam Ash, ringing up another nickel cigar sale, just to alter the monotony o' the battle for dimes and dollars. "When yuh should be here in the store, unnerstan me, helpin' with this here, now, advance Christmas rush, which started when them cold mornin's made it even the street manholes smoke!"

Drips and Drops, via Falk!

"Yes, we have no such lull in trade as was visible last month," encouraged Serene O'Hagan, third assistant chancellor of the House o' Tareyton for the Falk Tobacco Company, N'Yawk and Richmond, London and New Haven. "One reason for better business is the drop shipment game on our high grade smokings. Now we are authorized to accept reasonably small retail shipments, direct from factory, for practically all our brands. As an inducement, we allow a liberal gratis to the trade. Besides, we are advertising our Tareyton line heavier than ever before. One of the recent features is this life edition sign of Herbie Tareyton himself, from spats to monocle!"

And Grains O' Sand from Cameltown!

"Our advertising is also covering the boards right now," added Cecil Jordan, caravan commander for the Camel crew in the Capitol District. "More spontaneous posters, characterizing the Camel cigaret and Prince Albert tobacco in actual use, are of high visibility all around Albany. And our drop shipments are not entirely suppressed, either. Jobbers may make factory shipments for retailers again. This makes it much better for both wholesaler and retailer, f eliminates delivery charges for the mer, and gets action and speed of tribution to the dealer, no matter v located."

New Oak for Same Old Ow

"That's the sort of service we rer advised Paul Wesels, showing the Chair Club a General Cigar Con packing it had never seen before. here is another example of it. It' new ten-packing of the Owl cigar. the change. Formerly, you know, Owls were put up only in the stiff board box, or the ordinary cigar l Now we have this latest slide packi lighter construction, far more conve for the man who carries White wherever he'd carry a pocketbook."

No More Sparring at the Sp

"Well, no use carrying a pocke or anything else to Saratoga again season," remarked Pat Doyle, chai of the Chesterfield styleplus-crew Liggett & Myers Tobacco Compan he returned to the Hot Chair Club. " Jack Dempsey's training quarter White Sulphur Springs are close course. So, with the attractions of toga and the lake sections over fo year, nothing more remains for th garet salesmen to do but close acc with the vacation resorts. It was a g good year up North, however, an kicks are not nearly so numerous a boys have had in other seasons on in general."

From a Rubber Stamp Postoff

"Glad to hear it!" endorsed Jim S again demonstrating to a new cust just how Firpo finished—flat on the "And here is a picture post card our ole friend Johnny Beltz, he o Philadelphia Beltz cigar factory, is somewhere in Schwenksville, or s thing near that in Pennsylvania. Johnny says here that he's on his w Albany from his vacation ground Hancock Point, Maine. This point i place where the Gov'ment hires a m keep the lamp lit, rain or shine, in tree Light. Gotta do that, Johnny else ships would pile up on the shor way them destroyers destroyed t

BRANCH OFFICES: Syracuse Philadelphia

ves on the Hollywood coast the other r. Fog or no fog, Johnny insists this line coast is much worse than Hiram nson's scenario location. Way up re, even the original State o' Maine—ks up there say it that way—prohibi-nists couldn't find a red-nosed bootleg-r on a moonshine night if it wasn't for coast-guard, which hunts 'em down—up!"

One Shine, Ten Coupons!

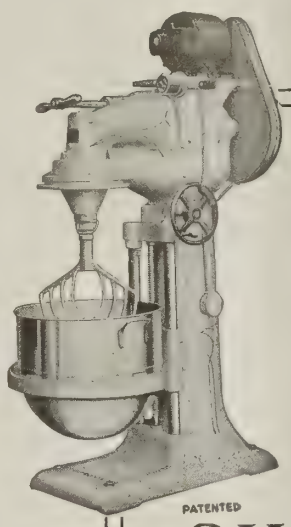
"Uh-huh, an' I should also see a new otblack on South Pearl street," sput-ed Sam Ash, selling the next customer pretty fair ten-cent cigar for fifteen nts. "Anneyways, he should not be so w, y' unnerstan, for he's taken an old ance—high rent! For this here bixby-y musta induced George Whelan or me of them other United Brothers to t the South Pearl street store almost to sixty-forty halves, unnerstan me. An' en, in the forty-half, this here shinola-d polishes a shoe like one of those there regon skookum apples. While, in the xty-half, left to the United-We-Stand, ny smoker should sometime save up, say, n coupons an' get it a shine next door r practically nothin', unnerstan. Then, hen extra certificate day rolls around, s it always does, the customer should uite likely get it a shine, polish, lacers, n' his Panama hat cleaned for Yom Kip-ur, all for practically nothin', y' unner-tan."

Blue Ski, White Smoke, Quite Lucky!

"And did you notice the sky today, Sam?" inquired Jim Stubb, making a pass t the Honorable Secretary o' the Hot Chair Club even as Bill Harrison would lo it—or Jack Dempsey. "All nice and blue and ev'rything! Then, all of a sud-len, you might say, up from Albany's Roosevelt Field shot a hornet! Looked ike a hornet, anyway, 'til someone said it was Cap Bradley come back to town again in his air-flivver. And the Cap he had some more white smoke in a box on he back of his bus. This smoke he blew out in a nice, long 'L.' Then a big 'U-C-K-Y.' Taking a fresh start he next got going on a seventy-two point 'S-T-R-I-K-E.' It was worth the money, Sam, to see how many men—and women—left their chores at the sink, and so on, to come out of the house and spell out that ad. One fellow I met reckoned 62,743 in Albany, 4,654 in Rensselaer and 7,952 other folk in the County turned out to watch that one ad. Now I didn't stop to figger that up, Sam, but if even half that number stood out in the middle of the street watching that smoke, I call the performance even a better advertisement than though the same money was actually spent in the First Methodist Church fair program, huh?"—THE SMOKER.

Tobacco Smoke Not Guilty, as Charged

MILWAUKEE, Wis., Sept. 12.—Tobacco smoke is less deadly in carbon monoxide gas than scientists of the past have claimed. This is the opinion expressed by three investigators of Pittsburgh before the semi-annual meeting of the American Chemical Society here today.



The investigators, G. W. Jones, W. P. Yant, and L. B. Burgess, made tests in Pittsburgh when three subjects were placed in a non-ventilated room of 1,000 cubic feet capacity, where for two hours they smoked cigars, cigarettes, stogies and pipes.

They claim the smoke was four to six times more concentrated than would be permitted under ventilated room conditions, the eyes of the smokers being protected by goggles.

After the test it was reported the highest carbon monoxide content of the room was .02 per cent. Previous investigators had shown that undiluted tobacco smoke contains .5 and .12 per cent monoxide, said to be most deadly of organic gases.

The investigators further reported that carbon monoxide saturation of the blood was not greater than 5 per cent, even in two subjects who each inhaled the smoke of twenty cigarettes.

In concluding their report the experts stated the tests showed that the concentrated smoke does not enter the alveoli or lung tissue cell.

Some Notable Changes Taking Place in Chica

Henry Hamann Resigns and Joseph Feiger Becomes Schu Branch Manager—Fred Wells Has More Mexican "Ju ing Beans"—Success with Private Brands.

CHICAGO, Sept. 16.—The news that Henry Hamann had resigned as manager of the A. Schulte Co., Chicago branch, came as a big surprise to the local trade. Mr. Hamann has been in charge here for several years. Previous to his connection with the Schulte Co., he was for many years general manager for Albert Breitung, who operates the largest independent chain of stores here. Hamann will remain in the cigar business and will announce his future plans shortly. He is succeeded by Joseph Feiger, a former Milwaukee cigar man. He has been connected with Schulte for a great many years, as a department manager in Milwaukee, Chicago, New Jersey and New York City.

Giving Good Account of Self

Gene Pohly is doing well here for the Consolidated Cigar Corp. He is an old time cigar artist, and does most of his heavy work for Clarence Hirschhorn & Co.

The Zinke Co., wholesalers of Fond Du Lac, Wis., will place Wm. J. Seidenberg's S. P. V. Tampa Resagos throughout their territory.

The Van Buren Smoke Shop shows a very classy window display of El Javana, a Detroit made cigar.

Convincing Evidence

Fred Wells, at his main store, 300 West Jackson Blvd., has a new window display of live Mexican Jumping Beans, which he retails at 3 for 25 cents. Once a year Mr. Wells gets these "Jumpers" from Mexico. Last year through an item that appeared in TOBACCO, he wholesaled several thousand, even getting an order from a dealer in Canada, who subscribes to TOBACCO.

On Display

Emanuelo, from the D. Emil Klein Co., of New York, is shown in large window displays at several of the Schermerhorn stores.

Fred Davis of the New York-Tampa Cigar Co., New York and Tampa, a recent visitor to this market.

Featuring Private Brands

Mort Hammer, with Marcelino & Co., Tampa, is visiting the trade. says it has been wonderful this year him in the way of orders. He fea private brands and has over fifte the best dealers here featuring their brand, made by Marcelino Perez &

Greately Gratified

Carl Sanders of the Sanders & Wa Cigar Co. is highly pleased over the ception the trade has given "Tenny cigars. While still new on the ma hundreds of Chicago dealers fea Tennyson on the show case.

Branching Out

The Economy Cigar Stands, Inc., w succeeded to the business of Lieberm Horwitz, operators of several Loop store stands, is branching out and taken over the cigar departments of t McLean Drug Co.'s stores on the No side. The managers state that they other locations in view to be op shortly.

Comoy Pipe Line

Sam N. Zinberg, with a full lin Comoy pipes, was a recent caller.

On the Way

Notice has been received by the t that Sam Fisher of Storm, Fisher & "is on the way." Mr. Fisher has s good live accounts here.

The Virginia and Gladstone Hotels have stocked Pancho-Arango made bond cigars.

Have Large Call

Hi Hammer of Corral, Modiska & is expected here any day. Both his ing and Lucius cigars have a large in Chicago.

turing Pancho-Arango cigars. Sev-l new sizes have been stocked and a ge window display shows off this ionally known, clear Havana to great vantage.

In Aid of Japan

Showing the "I will" spirit, the cigar l tobacco trade of Chicago is busy at sent collecting funds for the Japanese thquake sufferers.

Herman Rieser, president of the J. & B. os Co., has been selected as chairman this division, and with a large force assistants, thousands of dollars are be- collected daily from the cigar trade.

Getting Results

P. J. Rubey & Co., who recently took r the distribution of Girard cigars, re-t steady sales. Many Girard displays seen all over the city.

Half page ads of Chesterfield and Pall ll special cigarettes are being displayed the Chicago newspapers.

'Nothing Succeeds Like Success"

A call at the Congress Cigar Co., nch, 30 South Wells St., found every-ly busy rushing out orders for La lina cigars. The demand for this cigar ows bigger each week. Jacob Paley the Congress Cigar Co., Philadelphia, s a recent visitor to the Chicago anch.

Fred Charles, who represents Tampa d Pennsylvania factories looked over buyers a few days ago.

Booking Orders for Boston House

Estabrook & Eaton are well represented re by Francis Braynard who is booking ny orders for imported brands of cigars. Wm. Rheaume, who was with the Mel-rino Co., is no longer connected with s establishment. He may announce a w connection shortly.

Popper's Ace is in much demand. ardly a show-case does not display a tin this fast selling 10 cent cigar.— L. H.

Happy Days Abroad

Word has been received from Venice at Milton Durlach, of Durlach Bros., c., 181 Water street, and Mrs. Durlach e thoroughly enjoying their honeymoon Europe. From the city of canals and ndolas, the happy couple propose to plore Switzerland. They plan to re-rn to New York from Hamburg early xt month.

Key West Key Notes

KEY WEST, Fla., Sept. 15.—Work in the factories here continues at top notch. The Cortez factory on Monday placed extra tables for the additional cigar makers needed to meet the demands for their famous brands. This increase of force at the Cortez came at an opportune time to provide employment for the cigar makers who had lost their places at Mi Favorita factory, which closed as the result of the change in ownership.

Good Prospects

The Havana American continues to operate a large force and this is also the case at Thompson & Co.'s factory. The E. H. Gato is another factory where a large number of cigar makers find employment, and with the approach of the winter season, it is expected that all factories will continue to increase the number of workers to keep pace with the holiday orders, many of which are being received now.

The tobacco division of the Key West customs house shows that 236 bales of tobacco entered this port during August and the value of this tobacco was $26,103.

The report of the exports for May, which has just been issued from the office of the collector of customs for this district, shows that 245,000 cigarettes were exported from this country through Florida ports during August. Also that there was a small quantity of bright flue cured tobacco sent to Cuba and British West Indies. Cigars and cheroots sent to ports in the British West Indies numbered 2,000, and plug tobacco went to Cuba to the amount of 45 pounds.

May Imports

The imports for the same month show that 89 pounds of wrapper tobacco came from Cuba for Florida factories, of unstemmed leaf tobacco there were 224,307 pounds, valued at $191,448. Of stemmed leaf tobacco there were 113,857 pounds valued at $116,631. Of other tobacco there were 129,925 pounds valued at $33,765.

Faustino Rendueles, general manager of the E. H. Gato Cigar Co. here, who has been in Havana conferring with other officials of the company, returned to Key West Wednesday on the steamer Cuba.

county have voted in favor of a resolution to call a bond election on October 16, for the purpose of bonding Monroe county for the sum of $300,000 and more, if necessary, to construct a road to the mainland across the Florida keys. When this road is completed it will be the most novel of its kind in the world, coming as it will across islands in the sea from the mainland of Florida to Key West. In the construction of this road there will be several bridges across streams, and one bridge will be of the cantilever type. The building of this road to the mainland will be as unique as the Florida East Coast Railway, which crosses the ocean to this point, and it will be a considerable benefit to the cigar industry of Key West.

Tampa Cigarmakers Go Out in a Two-Day Protest

Like Umbrage at the Alleged Control of Adjustment Committee by the Manufacturers—Resolve Not to Enter Prolonged Strike—Miscellaneous News and Notes.

TAMPA, Fla., Sept. 16.—Tampa cigarmakers "quit the works" for a two-day resentment recess," Friday and Saturday, as the result of a mass meeting held Thursday night at Fourteenth street and 7th avenue. At this open-air meeting, said to have been attended by some 6,000 workers, it was decided to strike for two days, in protest against the alleged control of the adjustment committee by the manufacturers.

Latin clubs throughout the city were crowded with tobacco workers Friday, the workers thronging to these centers in the absence of the usual call of their occupation. Some of the factories were closed throughout the day, others kept open, even though in some instances their corps of workers had been diminished.

The decision to call the protest strike for 48 hours resulted from a compromise between the extremists and the pacifists in the ranks of the workers. The tobacco workers are understood to hold as their principal grievance, an alleged "packing" of the adjustment committee, in the interest of the manufacturers. Workers have expressed the belief that 8,000 or more tobacco workers participated in the protest strike.

Back "On the Job"

The disgruntled cigarmakers voted to return to work Monday morning, according to a communication signed by "The Committee of 39 Factories," addressed to the chairman and members of the Board of Trade of the city of Tampa, Florida." The resolution states that no general strike will be condoned at this time, because it is understood such a strike would injure the general interests of the city. The resolution, as quoted, was authorized by the mass meeting of 6,000 of the cigarmakers Thursday night.

Officials of the manufacturers' association have stated that no meeting of the manufacturers has been called to consider the present 48 hour strike, or any of the questions growing out of it.

Cigarmakers' Grievances

The manifesto addressed to the Board of Trade follows:

"In the meeting held by the cigarmakers of Tampa, Fla., last night, Sept. 13, 1923, it was resolved to subject to your honorable consideration the resolutions that were adopted, which are as follows:

"This mass meeting solemnly declared and resolved that it does not desire and will not accept a general cigarmakers' strike, because it understands that this would hurt the general interests of this community, and does resolve and declare a general stop of work for 48 hours, in protest of the attitude of the manufacturers, for their not taking in consideration our just demands.

"Therefore, in the event of any general stop or suspension of work in the factories shall be brought about exclusively by the manufacturers, who shall be solely responsible.

"We intend to keep working without rest until we obtain the scale of basis of 1918 with the prices of the present, besides three additional bases or clauses that we consider necessary to guarantee the necessary impartiality.

"This scale of 1918 is the only one that we consider legal and just because it is sanctioned by the three contracting parties, viz., the manufacturers, the Board of Trade and the cigarmakers.

"The present scale that it is pretended to make us accept is recognized by the manufacturers only."

Connecticut Notes

ARTFORD, Sept. 15.—There was a light t this morning, the first of the sea- The tobacco that was out shows ght touch on the extreme top of the t, but the damage is figured out to small; the acreage affected was not e. The local weather bureau sent warnings early Friday of a possible t. This was done by telephone to wers in different districts of Connec- t and Massachusetts, with a special iest to spread the warning to all who tobacco still in the fields, and during day, Friday, growers got busy and tically made a "clean up" of what had standing in the fields. How- , there was some that was caught, as acreage standing was too big to dle in a single day.

he percentage of tobacco that was out ery small, probably from 2 to 5 per of the entire acreage, and the ma- ty of this was very small patches tered around the valley.

ince the beginning of the harvesting son, and continuing through the har- t, the weather has been uniformly ir and not excessively warm, and very e mugginess which would cause pole at and do untold damage to the nper crop of 1923, as it did in 1922. le curing season has been ideal and the has "come down" to the entire satis- tion of growers, and with an occa- al warm rain followed by good clear ather the crop will be ready to take vn, thoroughly cured and ready to put the bundle very shortly.

he primed tobacco has made good gress and much is already in the at rooms, and the warehouses are ex- ted now to open on the 24th, to assort l put on the final touches, making leaf ready for market.

arly in the season the local leaf lers contracted with the growers who re not members of the Connecticut lley Tobacco Association, for their to- co, price ranging from 40 to 60 cents pound in the bundle, and on Broad- f, where it was assorted, prices as h as 75 cents per pound was made. le prices made were based on the acco being sound when delivered. is early flurry in the buying has been lowed by a lull and it is not likely t there will be any more buying until er the tobacco is taken down and is the bundle, so that its real merits may seen and can be bought with no "ifs l ands."

rowers feel well satisfied that their 23 crop of tobacco is a banner one and l go down in history as being one the best ones ever produced in the nnecticut Valley. The crop is a clean , free from disease, grown under ideal ditions, and free from hail or heavy ds, which usually do damage during growing season. When it was har- sted the conditions were favorable, and crop went into the sheds a sound one, d will come out with a very small centage of pole sweat, if any, and with ceptionally fine colors.

The 1922 Havana seed controlled by association has now practically all en sold, and before long the final pay- nts are expected to be made to the members. With the Broadleaf growers, the tobacco was largely sweated by natural process; the work of sampling is now under way, and within the next few days it is expected that the leaf will be ready to offer to the trade.

V. A. Sanders of the U. S. Department of Agriculture has released a bulletin on the Connecticut Valley tobacco crop and reports it to be the best crop for several years. Massachusetts expects a crop of 16,530,000 pounds, compared with 11,925,000 pounds of last year and the five-year average of 14,467,000 pounds. Connecticut's crop indicates 48,165,000 pounds, compared with 35,000,000 last year and the five-year average of 40,195,000 pounds.

Next week the association will make its first exhibit of tobacco at the Eastern States Exposition at Springfield, Mass. The exhibit includes a portion of a shed with tobacco hanging, a painted New England tobacco field as a background. In the foreground of the exhibit will be shown samples of Havana seed and Broadleaf and pictures of association members' fields. Three mammoth cigars, four feet in length, will also add to the exhibit and will show that the Connecticut tobacco is capable of making a man's-size smoke.

The association will also put on an exhibit at the one hundred and fifth anniversary of the town of Manchester, Conn., next month.

The membership of the association now numbers 3,451 and represents over 23,000 acres of tobacco raised in the river valleys of the Connecticut and Housatonic rivers, and grown in the states of Connecticut, Massachusetts, New Hampshire and Vermont.

It is estimated that to handle the 1923 crop of Havana and Broadleaf that it will cost considerably over $3,000,000.

Tobacco Saves the Day in Connecticut Valley

The farmers of the valley are fortunate in that their losses on the onion crop will be made up by their gain in the tobacco crop. The seed onions are a near failure, while tobacco is a great success. Seed onions are small and few of them will measure up to the standard. The yield of seed onions will be one of the smallest on record, though the price is high. About $3 a bag of 100 pounds is now the price. The onion sets were a splendid crop and the acreage very much larger than ever before and this will help out those farmers who put in both sets and seed. The tobacco crop of the valley has now been harvested. It has not been hail cut nor worm-eaten and is curing remarkably well. It will be the best quality tobacco raised in this valley in nine years, and will weigh 400 pounds to the acre more than last year. One-fifth of the tobacco is grown by farmers outside of the Association and that has nearly all been sold at from 40 to 48 cents a pound with 49 cents reported in a few cases. The tobacco on many farms will bring about as much as the farm would sell for, buildings and all. Thus diversification of crops is again justified for the farmers of the valley. If they had depended on onions alone there would be great distress in the valley, especially in view of the partial onion failures of the last few years.—*Northampton (Mass.) Gazette.*

ROCKY MOUNT, NORTH CAROLINA, U. S. A.

Danville Mart to Open October 2

DANVILLE, Va., Sept. 19.—The Danville Tobacco Association at a called meeting held on Monday afternoon decided to open the Danville market October 2, instead of September 25. This was done at the request of T. M. Carrington, president of the Tobacco Association of the United States, who stated that the South Carolina crop is late and that it was impossible for the larger companies to put buyers as early as September 25 in the Old Belt markets. The crop in this section is also late and little is expected to be lost by the change in date. It is estimated that fifty per cent of the crop is still on the hill in this section.

Farmers are very busy cutting and curing, and have their hands full. They report shortage of labor on the farms. The whole farm labor problem is reflected as a serious one, since many of the growers have been compelled to undertake smaller crops than they would have, had they the assurance of being able to secure the necessary help to cultivate, house and cure the leaf.

In some sections where rains have fallen in the series of storms, some damage has been done and there is complaint of the sudden turn in the weather. All things considered, however, the crop is shaping up well and is curing with good color.

Senator Ellison DuRant Smith of South Carolina, one of the organizers of the "farm bloc" in the Senate, spoke here on Thursday before a good crowd of farmers. The attendance was smaller than had been anticipated by reason of the demand on the farmers at this time, both in the field and at the curing barns. He lauded what co-operative marketing had accomplished, made a bid for continued unity by the farmers and predicted greater things for the organization of which he is an ardent champion. He was received with considerable warmth.—TETLEY.

Prices Run Up to 72 Cents at Greenville

GREENVILLE, N. C., Sept. 15.—Continued rain and unfavorable weather conditions for general work have given time for considerable grading; consequently, much more tobacco has been marketed this week than was expected. The quality continues low and prices do not average above the grade. Some little good tobacco was on this week and prices ranged for this up to 78 cents. But the great proportion of the tobacco continued to be lugs and tips of low grades. Prices have been around twenty cents for this. Big sales expected next week, as weather has been good for grading.

About 2,250,000 pounds were marketed this week. The total to date is near 6,000,000 pounds. Indications are Greenville will sell about 35,000 pounds for the season. Tobacco is c ing from many sections not hereto patronizing this market. Farmers not in the best of spirits over toba but realize that its poor quality is sponsible for poor prices. Better gra are not expected before October, in great quantity.—KING.

Henderson Auction Ma to Start Sept. 25

HENDERSON, N. C., Sept. 15.—With addition of another warehouse this sea the Henderson tobacco market for 1923-24 season will open for sales on open warehouse floors on Tuesday, tember 25. It is expected by all t in touch with the situation that the son will be a very active one, with l sales and good averages.

Word from eastern North Car markets, which have been in progress ready for two weeks, is that com grades of tobacco are bringing prices, and the better quality of wee holding its own, although not a g deal of the finer types of the weed as yet made their appearance there.

Practically all curing in this sec has been completed, and farmers will a large part of their tobacco ready marketing when the season starts.

The Henderson market this yea opening three weeks later than it di 1922, largely due to the lateness of crop, which got away to a bad star this section of the state, on account of big drouth during the latter part of spring; that delayed planting. At time the outlook for tobacco was bad in this part of the state. and m farmers were beginning to wo whether they would be able to put in weed at all. Early plantings suff greatly from lack of rain, and the s plants had to be watered by hand in s instances. Most farmers were ha more than half through their plan when the dry spell set in. This was of most crops in this section, and it counts for the lateness of the crop the start of the marketing season.

Henderson will have three auc houses this season, as against only last year. The large quantity of tob handled by the two that ran last offered encouragement for another year, and there was talk even of a fo in the competition, but this did not velop. The Cooper warehouse, the o now in operation on the auction ma will again be so operated, and will s the field with the High Price, which done big business here for the past years or more. The Planters, one of largest in the city, which was under last year to the co-operative associa and still is so far as that goes, has sub-leased by that organization to J Cheatham, who will run it this seaso an auction house.

ll of the three warehouses are ready the word to go. Their forces are plete, they have put their floors into e for the season, and a big break is ed for on the opening day. It is cted that the price range will be nd 20 to 22 cents. Common types are cted to feature the early dealings on market.

ne Tobacco Growers Co-operative Asation will open in this, the old belt, on sday, October 9, it is understood. vy receipts in their warehouses in the h Carolina belt, which have kept their rts busy longer than usual, have been cause for the delay in opening their on here. In the lower territory they the auction houses to it, but were ented from doing so here on account heir men being tied up in the other tory.

g Auction Sales Daily at Wilson

WILSON, N. C., Sept. 15.—Only 676,000 nds of tobacco was sold yesterday, ing the lightest sale day for some . Total sales during the 14 sales the market has been running 8,453,- pounds. Average for the fourteen $21.25 per hundred. For the past s, up to yesterday, the sales have heavier than ever before in the ry of the market, the average for five days previous to Friday being 730 pounds daily. As it was not d convenient to put on quintuple s the rate of selling per hour was eased from 240 piles to 300 piles; as there are six houses running, with increase in speed, it is exactly the valent to five sales at the 240 speed each per hour. The buying comes are feeling the strain of such ense daily receipts, but are running r plants day and night so as to avoid congestion.

is going to pan out to be the iest crop of tobacco raised in this ion for years, with a greater perage of primings and ground lugs ever before. Many of the better les are now showing up and while color is there, yet the body is thin. e of the fancy grades are selling as as $75 per hundred but they are, angels' visits, "few and far between." does not appear to us as if the ket has been as strong during the week on any of the grades except real fancy, as for the week previous. CFARLAND.

xican Import Stamp Tax Partially Reduced

WASHINGTON, D. C., Sept. 15.—The p tax on cigars and cigar clippings, ngs, cut tobacco, wrappers, chewing cco and snuff imported into Mexico reduced to 10 per cent on the cost production or its equivalent, by decree une 20, effective July 7. The tax on rettes remains at 20 per cent. This was formerly 20 per cent for all the ducts listed.—LAMM.

Tarheelia Pays Up

North Carolina paid $140,000,000 in taxes to the federal government last year, an increase of a trifle more than $18,000,000 over the amount collected the previous year. This increase alone is more than the total payments of the states of Alabama, Arkansas, Florida, Mississippi, or South Carolina, and nearly as much as those of Georgia, Kentucky or Tennessee. North Carolina's total payments lacked only about $40,000,000 of equalling the payments of all the rest of the south—Texas excluded—put together.

The explanation is that we have a great industry that is especially heavily taxed—*tobacco*. But at that, tobacco alone did not put up the entire sum, nor anything like it; and the amount that tobacco pays is evidence that it is in an exceedingly prosperous condition itself. Strike off the tobacco taxes from the total, and North Carolina would remain an enormous taxpayer.

Nobody emits loud cheers when he receives one of Collector Gilliam Grissom's little reminders that burden the mails in the early parts of the months of March, June, September and December; but all the same, the tax collector wastes no time around the poorhouse, and these missives that go out in such vast numbers from the office of the collector of internal revenue are incontrovertible evidence that North Carolina is doing business in immense volume, and not for her health, either.

Furthermore, evidence accumulates that the $140,000,000 that Uncle Sam received from his Tar Heel nephews last year will be thrown into the shade by the towering sum that will be paid over to him when Tarheelia begins to cast up her accounts next March.—*Greensboro News.*

New Bern Season Average, $16.52

NEW BERN, N. C., Sept. 15.—Sales on the tobacco auction market here: Total sales for the week, 73,610 pounds; average per hundred pounds, $15.63. Season sales to date, 190,906 pounds; average per hundred pounds, $16.52.—NEW BERN TOBACCO Co.

Inspects Hartford Market

Luis Toro, president of the Porto Rican American Tobacco Co., manufacturers of the Ricoro and other popular brands, inspected the Connecticut tobacco market at Hartford last week, accompanied by Percival R. Lowe, the well known leaf tobacco broker, of 155 Water street, New York.

NOTE: There were six warehouses failing to make reports as indicated by (the first column. These are estimated. They were: Chadbourn Warehouse, bourn; Enfield Warehouse, Enfield; Atlantic Warehouse, Kinston; Star Warel Wendell; Planters Warehouse, Wilson; Wilson Warehouse, Whiteville.

Comments from Warehouse Reports

The quality of the crop being marketed at present is showing up only fair. M lugs and common grades are being sold. Warehousemen from Wallace repor the crop in that section is far above the average in both quantity and quality

Crop Forecast

The condition of the tobacco crop according to the U. S. Department of culture's September crop report is 86 per cent of normal for North Carolina. forecasts a crop of 355,266,000 pounds from 510,000 acres this year, and a per acre of 696.6 pounds. The national crop, with a condition of 86.6 per c forecasted at 1,550,716,000 pounds. The state forecast is 48,000,000 pounds than the 1922 crop.

August Sales

The sales at warehouses during August amounted to 11,408,915 pounds ducers') as compared with 18,159,580 pounds sold during August last year. average price of sales ($22.52 per hundred) is slightly better than the 1922 av though the quality of the tobacco sold this year is about the same as that ma during last August. Fairmont and Whiteville showed the highest averages f month.

x of Dark Crop Harvested

PKINSVILLE, Ky., Sept. 17.—The l of the tobacco crop in this section ntucky and Tennessee has probably cut now and is being cured out. crop is reported to be a big one, was hard hit by black fire. Some in Christian county were so badly zed that the owners wouldn't go to ided expense of cutting, housing and g them. This perhaps is extreme, ere are many crops that have suf- greatly from the disease. The black ontinued to spread, the rains keep- p sufficiently to cause this, if the y that only wind and rain in com- on will cause a spread of the le, but it also grew worse during lear days.

result is that the farmers who suffered from it are sick, and g the tobacco growers generally is a feeling of fear that unless the e is checked and a preventive found that tobacco growing will be sub- ally decreased.

Many Barns Burn

th the fires going in the barns g the tobacco the usual destruction ng reported. The firing season is 's a time of danger and scores of are burned every year. This year oving no exception. But so far the do not appear to be covered by ance, as has been the case mostly insurance could be secured. Just this is the case is not known, but ome reason the farmers seem not to insured their barns and crops. At more barns that have been burned been unprotected than usual.—M. E. N.

A Large Leaf

INSON CITY, Tenn., Sept. 15.—A nen of Burley tobacco, grown in ington county, near Limestone, the s of which measured 45 inches in h and 22 inches in width, was ex- d in Johnson City recently by one e county's most successful tobacco ers. This is said to be a represen- tative sample of the tobacco grown in that section, where the crop generally, it is reported, is very satisfactory.

Immense Crop Predicted

Throughout the county, there are evidences that the tobacco farmers are going to market the biggest crop in the history of the industry in this section. The acreage was larger this year than in any previous year; the season has been very good in most sections, and improved methods of culture have had their beneficial results.

Invents Oil Burning Curing Device

DANVILLE, Va., Sept. 17.—Considerable interest is being manifested in an invention which has just been perfected here by J. A. Johnson, a crude oil burner designed so as to be placed in any tobacco barn and which would cure leaf tobacco with heat derived from oil instead of wood. Mr. Johnson has not yet put his invention on the market, but has applied for a patent in order to protect the device. He has proved it to be a success in experiments already made, according to his report. The oil burner would heat a series of coils which would give off odorless hot air which could be regulated more quickly than is possible at the present time. Mr. Johnson claims that it would cost $7.20 to cure a barn of tobacco by the crude oil process, whereas the average cost of the wood burned in curing a barn is about $20.

An Ingenious System

Attached to the burner is a thermostatic contrivance which would cause the sounding of a bell when the heat reaches a certain low or high level. This would enable the farmer to sleep by his barn with the comfort of knowing that he would be awakened automatically when the barn needed attention.

Farmers are showing interest in the apparatus, which will be exhibited in workable model, attached to a miniature barn, at the Danville Fair.—TETLEY.

Paducah Prospects

PADUCAH, Ky., Sept. 15.—There has been considerable inquiry during the past week for common to medium leaf. Some independent sales have been closed at prices ranging from 15 to 25 cents. The sales were small, though aggregating about 50 hogsheads. The association has also made some sales of common grades of English ordered tobacco that we know of, and no doubt it has sold some that we know nothing about. There is some inquiry and demands for practically all grades, but it is impossible to give the quantity or prices. Will say, though, that the market is practically bare of lugs and good leaf.

The past week has been more favorable for cutting and housing this year's crop. Farmers have worked throughout the week to full capacity in harvesting the crop, and we think that 60 to 70 per cent of the crop in this district is in the house.

We have ridden over the greater part of the district and find black fire raging in both well matured and late tobacco, and this is being cut as rapidly as possible. Something like 35 to 40 per cent of the crop is seriously affected by this disease. Very little of the crop is going in fully matured, because of the continued wet weather. We fear that heavy-bodied tobacco is going to be scarce, but there will be an abundance of medium weight of rather good quality, but the crop is not going to be what we expected a few weeks back. The quality is greatly reduced and the yield will be nothing like what was looked for. Still, with the large acreage and the rather large growth, we will have considerably al a normal yield, and while we have estimating the 1923 crop at above million pounds, we are forced to cut estimate to not over 95 to 100 mi pounds. It is impossible to get an int gent estimate on account of the rapid velopment of black fire. The matured bacco is also burning on the botton the plant, which is causing further terioration to the leaf. Black fire done more injury during the past than all before that time. It seems t growing faster during the cool wea than it did while it was warm and r We cannot tell what the final outc will be on what is left in the field doubt farmers will continue cutting there will be very little left in the at the end of next week. I think, tho we are safe in estimating this year's in the Western District at 95 mill which means about 10 millions more the 1922 crop. Farmers hardly enough barn room to take care of crop properly, and no doubt we wil further damage from house-burn, bu hope the quality and quantity will be ter than it appears.—W. B. KENNE

To Move to Gotham

Effective November 1, the Contin Can will remove main offices from S cuse to the Pershing Square Buil New York. President Thomas Cranwell, Vice-President Frederick Assman, Treasurer Arthur G. Chase others of the executive staff will to New York.

rley Balance Has Not Yet Been Sold

XINGTON, Ky., Sept. 16.—The Burley cco Growers' Co-operative Associa- has not sold its holdings of the 1922 as reported in a widely circulated r prevalent throughout the Burley ict, according to President and Gen- Manager James C. Stone, of the Bur- Co-operative, who tonight gave out a ment to the effect that the tobacco not been sold.

r. Stone's statement in full follows: With reference to a widespread rumor the Burley Tobacco Growers' Co- ative Association has sold all the to- on its hands, I want to say that rumor has no foundation in fact. have sold some tobaccos, but the er part of our redried holdings re- on hand the first of September we have, and will have until we obtain r and profitable price for it. It will e 'dumped.'

am unable to account for the report e rumored sale, which seems to have ed all parts of the Burley district. bers of the Burley Tobacco Grow- Co-operative Association will be noti- through the press of the district when tobacco is sold, just as they have notified heretofore whenever we made any sales of consequence.

rospects for the sale of our tobacco favorable, judging from the interest n by some of the manufacturers."

rley Growers Association Activities

EXINGTON, Ky., Sept. 15.—A complete us of the tobacco crop of 1923, in and of the Burley Tobacco Growers' Co- ative Association, is being taken by bers of the field service division of association, who at the same time are soliciting new members, Chief William Collins, of the field service, said today, and the recent additions to the membership have pushed the total up to 90,567, a gain of more than 20,000 since this time last year.

The census which is being taken is complete in every detail, showing the name and address of the grower, the acreage grown and the probable yield per acre. It will enable the officials of the Burley co-operative to know the approximate production throughout the Burley district before the new crop is brought to market.

After the census is completed, which will be about October 1, Mr. Collins said, a vigorous membership campaign will be conducted until the books of the association close for the year. No closing date has been fixed as yet.

Director of Warehouses Ralph M. Barker will go to Batavia, Ohio, Monday, to take over a warehouse and from there to Johnson City and other points in east Tennessee to provide receiving facilities for the new members in that section. He will visit Hopkinsville Friday to make reciprocal arrangements with the Dark Tobacco Growers' Co-operative Association for the joint use of receiving plants in border counties, to save the cost of establishing and maintaining two receiving plants where one is ample for the tobacco produced in certain border counties in which both dark and Burley tobacco are grown.

To Study Tobacco Industry

Jose Aixala, Jr., of Aixala & Co., Havana, and 169 Front street, New York, has arrived in New York from Cuba, for a two months' visit in the United States, and expects to make a thorough study of the tobacco industry in this country.

PORTO RICAN

The Tobacco Inevitable to a Good Mild Cigar

Manufacturers who have been the most successful in "getting a run" on certain brands of cigars are those who have produced a cigar that is mild to the taste, free in its burning qualities and at the same time fragrant in aroma.

No tobacco in the world combines all these requisites to a good mild cigar in so marked a degree as Porto Rican. In fact, much of the popularity attained by the "Mild Havanas" is attributable to the ideal blending of Porto Rican Tobacco in the filler.

"A WORD TO THE WISE"

Cigar Manufacturers should be sufficient. If you are not using Porto Rican Tobacco at present, try it, and see if your customers are not better satisfied. But ——

BE SURE YOU GET PORTO RICAN

There is no excuse for paying for something you do not get. By means of stamps of various colors the Government of Porto Rica CLASSIFIES all Tobacco exported from that Island either in the leaf or as cigars, as follows:

CIGARS

WHITE—Manufactured in P. R. with Tobacco Produced in P. R.
BLUE —Manufactured in P. R. with Porto Rican and other tobacco.
PINK —Manufactured in P. R. with tobacco not a product of P. R.

TOBACCO

WHITE—Genuine Porto Rican growth.
BLUE —Mixture of tobacco grown in P. R. and other countries.
PINK —Tobacco of foreign growth.

"Sniffing" and "Dipping" Snuff

CINCINNATI, O., Sept. 15.—While fashion designers are looking forward to the early return of the hoopskirt, bustles and other whims of bygone days, there are others who predict the rapid return of customs in vogue in the eighteenth century.

The old-fashioned snuff box, like Dobbin, is staging a rapid comeback in Cincinnati, according to retail tobacconists here who claim sales on snuff for the present year are almost double the 1922 figure.

Women, dealers say, are the largest buyers of snuff and are as particular about certain brands as the men are about the brands of cigarettes.

Always Popular Here

Cincinnati always has been a large consumer of the pulverized form of tobacco, according to jobbers and manufacturers who supply this territory, but the demand heretofore has been noticeably distributed among the foreign population.

The present demand seems to have shifted into the more fashionable section of the city, and neighborhood stores are called upon to furnish milady with the inhaling powder.

According to dealers, snuff is used in two ways.

Some still prefer to "sniff it," as did the fashionable women of the eighteenth century, while others prefer the more modern method of "dipping."

Today It's "Dipped"

The first method was in vogue in the earlier days, says the *Post*, when a pinch of snuff was placed in the nostrils.

The present-day snuff enthusiasts use it in the form of chewing tobacco or by "dipping," using a brush.

It is noticeable, however, that women who use snuff do so in privacy, but so did the women who took to cigaret smoking, which is now fashionable.

Pennsylvania '23 Seedleaf Crop Starts to M

Several Sales Reported at 25 and 26 Cents for "Wrap Grades, and Four to Eight Cents for Fillers—Keys State Likely to Feel Effects of the Wisconsin Loss.

LANCASTER, Pa., Sept. 17.—Buying of the 1923 crop of Lancaster County seedleaf has begun. Amid the many rumors of this and that price being offered to growers comes the definite information that at least several sales have been made, one at 25 cents per pound for wrappers and eight cents for fillers and others at prices in that neighborhood. Several growers are reported having sold at 26 cents per pound for their wrapper grade and from 4 to 7 cents per pound for the filler goods.

Wrappers, of course, used in the colloquial sense, means the better grade of cigar fillers which, when very good, may be used as binders in cigar manufacture. What the grower terms his filler tobacco is really the low grade offal. At 8 cents per pound, this type of tobacco can yield the producer a neat income, although it is likely that the larger percentage of crops bought at these prices are the better grades.

Cressmans Only Active Buyers

But one firm, Allen R. Cressman's Sons, has actually been doing any buying up until this time. It is exceptionally early in the season for the grower to part with his crop and the contracting by buyers at this date may have the effect of precipitating a rush of buyers to the fields in an effort to close deals on the good crops, which are not any too plentiful.

The High Price Levels

With prices so early in the season at their present high level and the 1923 goods apparently in great demand, the grower's reaction may be predetermined to a nicety. He will attach much value to his crop if it be at all worthy of consideration as first class goods; he will be reluctant to part with it at prices any lower than have already been paid; and he will, moreover, be somewhat in a position to do this, for the kind of tobacco now in demand is relatively scarce in the county.

Wisconsin Loss May Spur to Activities

All of the leaf that has been bought up to this time is of the best quality that has been grown this season. In local packing circles, the big cut in the Wisconsin crop through frost damage is looked upon as a possible spur to the activities of buyers already busy in fields throughout the county. The cigarleaf binder tobacco found in the good Lancaster county crops serves admirably when used in place of Wisconsin. If the loss in the crop of western grown tobacco is as serious as has been reported it is entirely probable that all locally grown leaf of binder quality will be held at pretty high prices this year.

Frost Appears

The first tinge of winter was in the air during the past two days and the first light frost was in evidence this morning. The sight of the whitened ground lent wings to the army of men employed in Lancaster county's tobacco fields and many of the 25,000 acres in tobacco this year fell under the cutter today. Growers are making every effort to house all of their seedleaf before a heavy frost takes toll in blackened, mushy, frozen leaves. From several low lying sections of the county slight damage was reported from this morning's frost, but no appreciable damage has been done as yet.

Normal Burning Qualities

It is well known that a "dry weather crop" is productive of very poor tobacco as a rule and that packers view as the tight-grained, leathery leaves result from cigarleaf grown in a dr season. The rainy period which s this section several weeks ago has a what had every appearance of be typical "dry weather" tobacco yea has saved the 1923 crop from bei poor burning quality. The ple moisture and the favorable conditi the crop to receive it made the fer elements available which produce th sirable burning qualities in the cig Federal and State experts in tobacc ture located in this section are re sible for the prediction that the bu the crop now in harvest will we proach normal and will be, on the normal.

Much interest in low grades and is still in evidence, the Lancaster p report. There is also considerabl mand for binder types but these are very scarce. Requests for old are many but there is little to b except some resweated 1921 and a 1922 leaf. Numerous small sales a transacted with the jobbing trad though nothing definite could b tained, it is said that prices have ch very little from what they were in the season.—KEYSTONE.

Market Review

Business during August was active for the time of the year, both in Virginia and Western tobaccos. The market in Southern and Eastern North Carolina opened very high on low grades, and in the Southern section better grades are realizing about same prices as last year, similar conditions being anticipated in Eastern North Carolina when the better grades appear. The quality generally is disappointing compared with last crop.

Kentucky tobaccos of medium and better grades are gradually being taken up and there are indications that these grades, of the 1922 crop, will be scarce before the new crop comes on the market.

We have to report a fair business in Nyassa Leaf, and there is a distinct shortage of tobacco of this growth with good color.

Philadelphia Trade Gains With Fall Activ

Retail Cigar Business Moving Forward—Conditions Varic Described As Fair to Fine—Box Sales Show Improver —Leaf Market Seems to Be in Fair Shape.

PHILADELPHIA, Sept. 18.—With the return of autumnal activities in commerce and industry generally, the retail cigar trade in this city which, for a rather lengthy period was quiet, has also moved forward into a condition variously described as ranging from fair to fine. For the first time since the vacation preparations were being made, there came activity in sales by the box. But the largest benefit of the last seven days was in the livelier transient business. A spell of cooler weather was, of course, a contributing cause, the principal factor, however, being the presence of more people on the street by reason of termination of vacation holidays. The retailers have not noted any change in the character of business as favoring the better grades and the higher priced cigars. The trend of buying in at least the centrally located shops are for the more expensive cigars. Cigarette sales are continuing in regulation fashion. Smoking tobacco sales also showed a gain, but this was rather of seasonal character.

In the effort of manufacturers to effect a gain on production, the week brought out a handicap in the slowing down enforced by absence of hands celebrating the Jewish holiday. Previous to this, and again after passage of the celebration, a number of the larger plants had made arrangements for going on a twelve-hour schedule. In all of those with national distribution, just as many competent operators as applied were employed. The difficulty experienced, however, was that all insist on being given work on the highest priced cigars.

The leaf market showed satisfactory typical early fall business, most of it coming from the smaller and medium sized manufacturers with whom Porto Rico leaf just now is in favor. The Havana market is quiet, with firm prices.

Frishmuths Vindicated

By the irony of fate, within a short time after Robert Biddle Frishmuth, of the former century-old firm of Frishmuth & Co., Inc., 17th and Lehigh streets, committed suicide, because of worries over charges brought against his brother, John C. W. Frishmuth, Jr., who was co-executor of the estate of the late John C. W. Frishmuth, Judge Wells, in the Burlington County Orphans Court at Mt. Holly, during the week handed down a decision of dismissal of charges of mismanagement brought by some of the other heirs. The judge, in effect, declared that the estate was properly managed. Principal objection was that the executors asked an allowance of $2,000, representing the appraised value of 2,000 shares of the stock of Frishmuth & Co., Inc., belonging to the testator at the time of his death in June, 1921.

Two New Schulte Stores

Two additional stores are to be added to the Schulte string in the Philadelphia district, under the management of Vice-President S. M. Harris, of the Schulte Corporation. The newest stores to be opened here are located at Front and Market streets and in the newly erected Fox Building at 16th and Market streets. Including the two new stores, there are now ten stores under the Schulte ownership in Philadelphia proper, nine of them being in the central section and one in West Philadelphia. The Philadelphia management also includes one store in Trenton, another in Camden, Atlantic City and Wilmington, a total of fourteen in the zone. There is also one Schulte factory, the former home of the Sig. C. Mayer Co., at 306 Cherry street.

Testing Unbreakable Cigar Bi

The manufacturers are displayi terest in the report published in To September 6, stating that James S and Henry Ullman, professors of c try in Lehigh University, Bethlehe completed experiments for the tre of tobacco stems for the purpose o ing a cigar binder which will prev cidental breaking of cigars when in the pocket. The new product is offered to some of the manufacture they are making practical tests of

Douglass Irvine, advertising m for Otto Eisenlohr & Bros., Inc Market street, has returned from a trip to Ohio, New York and the west. The corporation is very oversold on Cincos and has leng its work-hour schedule to 12 hou day in all factories.

preserve the tobacco odor a liquid
eed from tobacco leaves was mixed
it during the rolling process. It
a good binder, but could not be
e because of the burnt paper odor
ed during the smoking. This, of course, would scarcely do even in a campaign brand and the two professors set about eliminating it by chemical methods. After a year's effort they devised a way of treating the stems which kept within the "pure cigar" law, left no unpleasant odor and formed a perfect binder.

May Fill Long Felt Want

The discovery will prove a great boon to the married man. The lover will cheerfully sacrifice his cigars in the rapture of a fond embrace, but the less romantic married man may cool the ardor of his morning farewell if the finds that it is usually accompanied by the destruction of his smokes. Many a family tilt may have originated over an undue zeal for the welfare of a common black cigar. Much of this will be avoided through the discovery of the Lehigh professors. The wrapper may crumble, but the filler will remain intact. Only one fear remains. The application of the process may tend to retard the trend of prices in the direction pointed out by Mr. Marshall.—*Indianapolis (Ind.) News.*

Secures Choice Sumatra

Isaac Goldberg, of the Field Cigar Corp., of Detroit, Mich., was a heavy purchaser in the local leaf market last week, securing a quantity of very choice Sumatra wrappers for his corporation.

Hug-Proof Cigars

ing with the aroma of the smoke.
This will be a great godsend in this country, where the elaborate cigar cases of other lands have never come into general use. It will also put a stop to the practice of rather sheepish young men in slipping the cigars in their pockets into a place of safety when they go to call on their best girls, to say nothing of the married men who complain of the cordiality of their wives' greetings when they return home at the end of the business day.—*New York Telegram.*

Cleveland

Another Visitor

L. Altman, of the M. Rodriguez Co., was a visitor this week, pushing hard behind the good La Melinda cigar. This cigar is being featured at many of the best stores in town, due to the good work of its sponsor.

The Return

Concessionnaires are closing up their stands at all the nearby resorts and making their way back home again. Cool weather put a damper on the business at all the resorts of late, making it rather unprofitable to remain open. Only one or two of the very largest outdoor amusement centers are still open and these are slated to close in a very few days.—HERB.

the weather has anything to do with the quality of the cigars you make, if encased in our famous wood package, you will know they are safe from climatic changes.

Opens Wholesale House in Atlanta

In order to help better its service, the Eli Witt Cigar Co. of this city recently opened a wholesale house in Atlanta. The Atlanta firm is the J. B. Withers Cigar Co., the former business under the same name consolidating with the Witt interests. J. B. Withers is the head of the new firm and C. J. Woodbury secretary and treasurer. William L. Van Dyke, vice-president of the Witt firm, returned Friday night after several days' visit in Atlanta. He was optimistic over the business outlook.

Files Charter

The Tobacco Products Machinery Co., recently organized, filed its charter Friday in the office of the clerk of the Circuit Court, giving the capitalization as $15,000 and its officers as William H. Haupt, W. J. Haupt and C. F. Bremer.

Abana Cigar Co.

Charter for the Abana Cigar Co., a new concern, capitalized at $40,000, was filed in the office of the clerk of the Circuit Court Monday. Incorporators are named as S. J. Nesbitt, W. E. Tuc others. The company is formed purpose of manufacturing cigars, c and other tobacco products.

Keeping Optics on Hava

The cigar manufacturers of are keeping in close touch with t dition of the leaf markets in Cu their earlier purchases they pr themselves as to quantity and sufficient to supply all their o needs, and are now only buying i quantities from time to time, wh vorable purchases can be made, to no shortage in meeting the inc demand for their goods.

Fred Davis, of the New York-Cigar Co., returned last Wednesda Havana.

J. J. French and M. Alvarez are to sail for Havana next Thursda

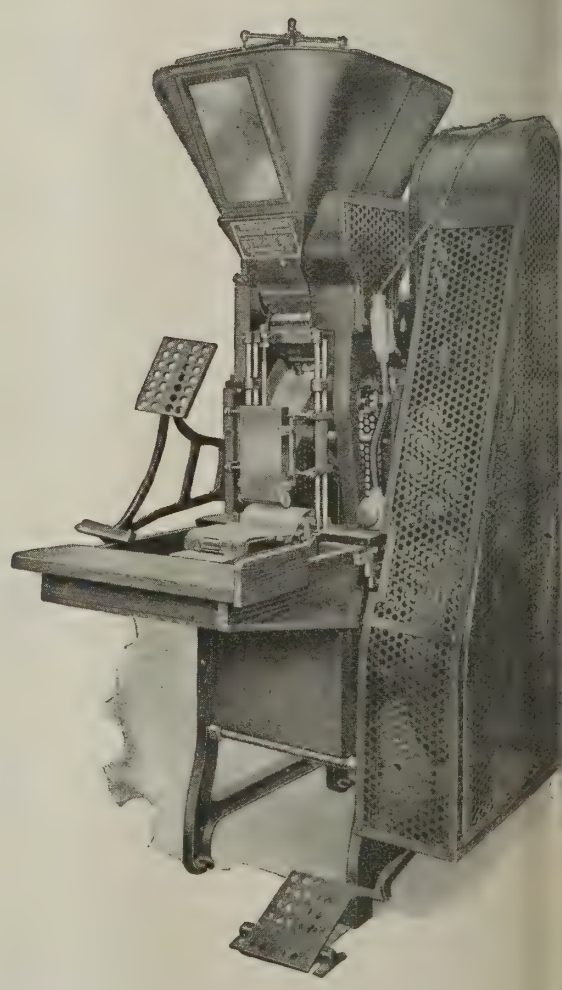
CLASSIFIED ADVERTISING

WANTED—Jobbers for distribution quality cigar, small size, long filler, han retailing at 3 for 10c. Samples and pri mitted by the Mella Cigar Factory, 304 St., Louisville, Ky.

ANNOUNCEMENT

You can now **BUY or RENT** latest improved Liberman Power Scrap Bunch Machines—illustrated at the right.

The work they are now doing in many high grade cigar factories PROVES that they:



1. **Make Perfect Bunches** of any size and shape, out of any size scrap, large and small together, always evenly distributed.

2. **Enormously Increase Production**—4,000 to 7,000 Bunches Daily according to speed of operator.

3. **Save Binder** enough to more than pay for the machines.

4. **Have no complicated mechanism** — requiring no mechanic to adjust and keep in order.

Full Particulars on Application

LIBERMAN MANUFACTURING CO.
N.W. Cor. 20th St. and Allegheny Ave.

MACHINERY PACKAGES SUPPLIES

The Economic Importance of Machinery in the Tobacco Industries

Rapid Strides Made in Manufacture of the Cheer-Producing Weed As Result of Mechanical Ingenuity—Government Benefits from Adoption of Appliances Which Cause Greater Output and Consumption — The Age of Automatic Machinery.

By Dr. ARTHUR SELWYN BROWN

TOBACCO is one of America's greatest agricultural staples. In the early colonial days it was the chief source of revenue of the colonists and the chief of the colonial exports. For the best part of a century, America supplied the world with its principal tobacco supplies and furnished the European tobacco manufacturers with their supplies of leaf. But the invention of tobacco manufacturing machinery, largely the work of American engineering ingenuity, caused a revolution in the tobacco world and quickly raised the United States to the forefront of tobacco manufacturing countries.

Machinery, of a crude type, was used in a small way by some of the colonial farmers, who made tobacco from their own leaf. It was, however, not until the late eighties that machinery was introduced into American tobacco industries for the promotion of large scale production.

The "Bonsack," the "Comas," the "Eliot," and several other cigarette-making machines were invented and patented in the United States in the years 1889-1893. They were successful in operation and were adopted by manufacturers generally. Thereafter the tobacco industries started to increase production prodigiously and there has been no set-back. They are still growing annually at a great rate.

Production Made Rapid Strides

The Internal Revenue returns show that on June 30, 1863, the aggregate revenue from tobacco manufactured within the United States amounted to $3,100,000. In 1866, three years after the introduction of cigarette making machinery, it jumped to $16,531,000, or nearly sixfold what it was before automatic manufacturing machinery was used. The returns steadily advanced until in 1871, when they were more than double what the Government received in 1866, the figures being $33,600,000. In 1900, the tobacco revenues had mounted to $59,355,100, and in 1918 they ran up to $156,188,700. Last year the extraordinary revenue of $270,800,000 was secured by the Government through the taxation of manufactured tobacco. These great increases in the revenues from tobacco serve as a barometer to register the unprecedented growth of tobacco industries of the United States. They show, not only an unusual rapid growth, but also one of steady progress. It was the general adoption of automatic machinery through the tobacco industries and the large amount of capital it caused to be put into tobacco manufactures that gave the impetus to the stupendous growth of the industries.

Introduction of Modern Machinery

The Comas cigarette machine was put on the market by the Comas Cigarette Machine Co. in 1889. James A. Bonsack, was one of the directors of that company. The company marketed its machine throughout the United States and Canada and in Spain and Latin America. It was particularly adapted for making the Spanish type of tucked-end cigarettes. This machine now has a capacity of over 100,000 cigarettes per day. In its early forms, its capacity was not so large; but it was able to turn out many thousands of cigarettes per hour beyond the output of the largest hand-made cigarette factories.

Auxiliary Appliances

When the cigarette business increased further, the machine was equipped with numerous auxiliary appliances which automatically fed the paper and tobacco, tipped the cigarettes after they were rolled, stamped monograms and other devices on them when necessary and packed them in paper packages. Knife grinders, tobacco cutters, graders, granulators and numerous other machines were also added until today the Comas Cigarette Machine Co. manufactures a line of effective machines which will automatically manufacture, pack and crate cigarettes in a factory of any size.

Packing Machinery

To indicate the labor saving secured by automatic machinery in a cigarette factory, the operations of a modern cigarette packing machine can be witnessed. One of these will wrap and paste any number of cigarettes in a square or oblong package at the rate of from 40 to 60 packages per minute or between 400,000 and 500,000 cigarettes per day. It would take from 30 to 50 persons to pack that number of cigarettes. This is simply an illustration of what all the modern automatic tobacco machines are doing in increasing output, and in reducing costs and labor.

The Bonsack and Eliot machines were placed on the American markets shortly after the Comas. The first large instalment was made in the factories of W. Duke & Son, New York, and Durham, N. C. Subsequently the factories of Allen & Ginter, Richmond, Va.; W. S. Kimball, Rochester, N. Y.; Goodwin & Co., New York, and the Kinney Tobacco Co., New York and Richmond, Va., were equipped. These firms marketed several brands of cigarettes which quickly became world famous and were marketed in the remotest quarters of the globe. It was the excellent automatic machinery, as much as the fine tobacco which largely contributed to the success of these well known manufacturing firms.

Immense Production

Today, some of the American cigarette factories are consuming over a million pounds of tobacco monthly. This tobacco is removed from the bales or the hogsheads, in which it is packed, to the sampling, grading, cleaning, cutting, and rolling departments and is labeled and crated for marketing almost entirely by automatic machinery. And all this intricate and accurate work is done by the machinery without loss.

Naturally machinery, which runs and operates with the regularity and precision of a watch, requires to be installed in a proper building and well cared for.

Machinery in Snuff Factories

The machinery used in the snuff factories, introduced about the same time as that in the large cigarette factories, led to similar economies in costs, similar improvements in products and similar increases in business.

After the leaf is fermented it is dried in automatic revolving driers and grained. The tobacco is then ground in mullers or mills and passed through sieving machines. It is classified, blended and packed by other machines, the whole of the operations after fermentation are almost entirely carried on automatically as in cigarette making.

Smoking Plug and Twist

The use of machinery in making plug and twist tobaccos is just as extensive as it is in cigarette making. And the processes are almost as automatic.

Burley tobacco is chiefly used in the manufacture of smoking, plug and twist tobaccos. The wrappers, in the light grades are made of white burley. The leaf is recured at the factories in casks containing from 700 to 1,000 pounds weight. This leaf is unpacked and after being shaken out and cased it is sorted, leaf by leaf. It is cased again by steam or water as conditions indicate and each leaf is flavored by being dipped in a flavoring mixture. The leaf is then dried and weighed. It is divided into quantities suited to the size of the plug to be made from it. Each weighed and divided portion is then put into a mould and pressed into the plug form. These plugs contain the filler. They are sorted, weighted, inspected and passed to the wrapping department where the lighter colored wrapper leaves are put on. The wrapped plugs are again weighed, sorted and inspected. Those which are found perfect are fed into hydraulic presses. In these presses they undergo a further fermentation. Then they are weighed, sorted and inspected. Those which pass the tests are tagged or labeled, wrapped and packed, or, when they are to form smoking mixtures, they are sent to the cutters and rollers.

Chewing tobacco is made in the same manner as plug. However, it is flavored more highly and sometimes undergoes a little more fermentation.

The granulation, flaking, shredding or rolling of pipe tobaccos is done in special machinery after the plugs are made.

Sanitary Conditions

Most of the above operations in modern factories are carried out almost entirely by automatic machinery of the finest character. The tobacco plants are as carefully planned, managed and cleaned as the finest factories making food products.

The manufacture of snuff, which is still an important part of the tobacco industry, is also carried on by automatic machinery. This article is made in a similar way to plug and smoking tobaccos. But greater attention is given to the fermentation and flavoring of the leaf. The organic acids and essential oils in the green tobacco leaves are completely expelled in the fermentation processes.

When fermentation has been carried to the snuff stage, the leaf is dried and then grained in mills or rollers. The ground product is sieved and then seasoned and perfumed when necessary. Then it is packed ready for the market.

Tobacco plants are also equipped with a large amount of auxiliary machinery. There is a great amount of conveying, packing, printing, varnishing, wrapping, grinding, sieving, weighing, box-making, can-making, crating and labeling machinery used in every large factory. Everywhere machinery is used in place of labor, with the view of increasing the output, improving the products and augmenting the efficiency of the plant generally.

Proved Beneficial to Labor

The labor unions in the early days disliked the extensive use of machinery in tobacco factories and tried to prevent the improvements which machinery developed. Experience, however, has demonstrated that instead of restricting the use of labor, the equipment of tobacco factories with automatic machinery has been greatly to the advantage of the workers. It has increased the number of employees in every branch of the industry, given far higher wages than those received by the old hand workers and they are enabled to work under almost princely conditions as compared with the insanitary state of the old hand factories. A striking testimony of the benefits the equipping of tobacco factories has brought upon labor has been paid by Samuel Gompers of the American Federation of Labor. He was engaged as a cigarmaker for 36 years in a hand factory in New York City. He saw the improvements made in the working conditions of factories using machinery and boldly told the members of his labor organization that it is quite futile for workers to protest against the use of machinery in any industry. We are living in a progressive age and should alertly welcome every new device that will promote labor's efficiency and raise the dignity and social status of the working classes. Mr. Gompers challenged American workmen to show him a single instance of a factory where the introduction of modern machinery had made working conditions worse instead of better. Naturally, no one could show him. The testimony of the whole world is that machinery, while displacing labor in a certain manner, enlarges the scope for employment in other ways.

Tobacco Consumption

While the tobacco industry in the United States is the greatest in the world and the most highly organized, machinery is now almost universally employed in manufacturing tobacco and its products. Accurate statistics of tobacco consumption are not available. But the following figures, based upon official year books, consular reports, commercial attaché reports and trade estimates, give a synoptic view of the world's production of tobacco in pounds during the past three years. These returns will serve as a good measure of the world's manufacture of tobacco and in a lesser degree of the importance of the tobacco industries in the various countries.

World Tobacco Production in Pounds

*Estimate—This same figure has been used for years.

U. S. Stands Out Boldly

The striking position occupied by the tobac industries of the United States is well illustrat by these figures. About one half of the worl tobacco is annually manufactured in Americ The increased returns being made in Franc and her colonies, in Germany and in Sou America are also interesting.

Comparative Production

Another important fact disclosed by the co parative production continues to increa rapidly. The great consumption which d veloped after the war continues. Last yea consumption was the greatest ever recorde This year's consumption, judged by productio statistics, promises to be as great. Improv ments in manufactures following upon im proved machinery are undoubtedly the bas causes of the increasing popularity of tobac and smoking.

One of Leading Industries

The manufacture of tobacco for smoking various forms, is one of America's foremost i dustries. It involves the investment of a va amount of capital and gives employment many of thousands of people. But it also i volves other valuable industries. The makin of tobacco pipes, cigarette and cigar holder tobacco containers, humidors, pouches and oth smoking requisites stimulate other important d partments of the industry, all of which emplo machinery most extensively.

Employment of Machinery

The successful employment of machinery any given industry may thus be seen to lea to its use in developing manufacturing pr cesses in many other allied industries. It fin new fields for the investment of capital, for th utilization of many materials, like amber, bri roots, calabashes, etc., which would have litt use otherwise, and benefits the social status the working classes by giving steady emplo ment, at good wages and under satisfactor sanitary conditions. While machinery do away with the skilled hand-worker, it opens most extensive field for the employment of le skilled people. In the process of its evolutio we have witnessed first man and horse powe then man and hand-operated machines, and no we are witnessing great, complicated factorie like a modern cigarette factory, wherein man intricate and delicate processes are carried ou entirely automatically and without the produc being touched by hand. Our times may, there fore, be truthfully called the Age of Automat Machinery.

Lightens Burdens

The injurious effects of fatigue are take away from the workers; they are able to wor shorter hours in agreeable surroundings an can improve their mental, moral and physic health in their longer leisure hours.

International Trade Stimulated

The larger aspects of social welfare are als greatly promoted by the increased use of ma chinery in the industries. International trad is stimulated by improving standard articles fo export and creating a demand for external ra materials and supplies. The increase in materia wealth causes the formation of new banks, sav ing and co-operative societies; makes a deman for more and better homes, public services an supplies. In other words, the widespread util zation of modern automatic machinery in th tobacco and other industries is causing a pro gressive, if barely noticeable, adjustment in th social welfare of mankind, as well as a rapi increase in National wealth and a general bet terment in the standards of civilization.

In addition to the financial investment an economic advantages derived from the ex tensive employment of machinery in tobacc manufactures the nation experiences importan benefits.

Use and Efficiency of Automatic Machinery in Cigarette Making

Inventions That Rank Among Wonders of the 19th Century — Basis of Immense Tobacco Industries in the United States—Excellence of Products Made in American Cigarette Factories Famous the World Over — Bring Honor to Trade of Country.

By GEORGE EDWARD LOCKWOOD

AUTOMATIC cigarette making machines, purely American inventions, and ranked among the wonders of the nineteenth century, a period that will always stand out in the world's history as one of the greatest epochs in civilization. The cigarette machine has formed the basis of the immense tobacco industries of the United States and enabled America to rapidly spring to the forefront in tobacco culture and manufacturing. The machinery employed in American cigarette factories has reached such a stage of perfection that the tobacco is almost untouched by hand from the time the leaf is unpacked from the bales or hogsheads in which it is received at the factories until it is formed into cigarettes and packed for the world's markets. The whole of the intricate process of manufacture is done by machines operating with the precision of clockwork.

Made Famous Everywhere

In some of the American factories over a billion pounds of tobacco is converted into cigarettes of the highest grade each month with comparatively no loss. This efficiency has led to immense investments of capital in cigarette making and has stimulated every branch of the tobacco business. The excellence of the products of the factories also has made the leading brands of American cigarettes famous on every portion of the earth where men smoke.

The general employment of machinery in cigarette manufacturing has not only led to improvements in the standardization of the quality of the manufactured products, in the uniformity of packing and packages, but also in the healthfulness of cigarettes. During the war, an immense impetus was given to cigarette smoking. The soldiers, sailors and artisans of all countries at war smoked cigarettes continuously and exclusively. The greatest tests cigarette smoking ever submitted to were made and the cigarette emerged triumphant. These triumphs were very largely due to the excellence of the manufacturing processes secured by the extensive use of automatic machinery.

Factory Improvements

Improvement has resulted in improved factory construction and increased sanitation. The modern factories are large, well planned steel and concrete structures, well lighted and ventilated, and fitted with every hygienic contrivance science has suggested as desirable. The temperature of the air in the factories, and the moisture contents are automatically regulated as the various processes need, and means are provided for the daily cleaning, polishing and overhauling of every piece of machinery in the factory.

Naturally, such excellent work can only be done by the employment of vast sums of capital. This is always forthcoming because experience has shown that the tobacco industries are among the most profitable and stable of all the American industries.

Before tobacco is ready for conversion into cigarettes it must be treated in many ways in storage and fermentation rooms. This requires from one to two years. Much capital is tied up in this tobacco until it reaches the cigarette factory.

Large Expenditures

The general employment of automatic machinery calls for large capital investments. A modern tobacco factory is an extensive establishment. It requires a large working capital. The consumption of raw materials is so great that buyers have to be kept in all the tobacco growing centers and marketing cities to purchase tobacco supplies to keep the factories in operation continuously. This also calls for large capital expenditures. The continuous working of the factories ensures a large and steady output of tobacco products which must be marketed by an important selling force. In other words, the great changes wrought by the extensive employment of machinery and automatic processes in the manufacture of tobacco has resulted in a great extension of the industry, increased capital investments and effective selling and distribution forces. These have necessitated improved economical and financial methods and the soundest and most efficient purchasing, handling, manufacturing and distributing organizations. The effectiveness of a large modern factory, in comparison with an old type of hand-labor factory, can be easily shown. The costs of a modern factory are considerably lower in every respect in every department of the industry.

"It Pays to Advertise"

The successful promotion of a tobacco product depends, to a very large degree, upon successful advertising. Astonishing results are obtainable by advertising smoking goods effectively on a large scale. This also entails large capital expenditures and can be best done by powerful companies. We, therefore, see improved advertising and sales methods progressing hand-in-hand with the increased use of machinery and the necessary larger capital investments in the tobacco industries.

The manufacture of tobacco begins when the leaf, which arrives at the factories in hard-pressed bales or in wooden hogsheads, is opened up and loosened so that the tobacco no longer sticks together through the compression of the packings.

The leaf is "mellowed" for a period of from three to five years. Although the tobacco reaches the factories in a mellowed condition, it must be opened up and be submitted to several interesting treatments. One is steaming. The leaf is taken from the bales or hogsheads and, in the case of Turkish and other European tobacco which is strung together in wreaths with twine, the leaves are detached and foreign matter is culled out. The tobacco is then stacked in rooms for several hours and steamed. This swells the leaves and freshens them so that they are less brittle and better suited to undergo the subsequent treatment. Assuming that the tobacco is to be utilized for making cigarettes, and for other purposes the processes are somewhat similar.

Subsequent to the steam reconditioning treatment, the leaves are stripped or stemmed. That is to say, the large mid-rib is removed from every leaf. The machinery employed for this operation is most ingenious. It works with uncommon efficiency, doing a delicate job expeditiously and without actually loss of leaf. When the leaves comes from the strippers they are divided into two equal halves called "strips."

Cleaning Tobacco

The loss in weight caused by stripping, cleaning and dusting amounts to nearly 30 per cent. The dusting is done by passing the leaves on traveling belts with magnets and in circular shaking sieves. The magnets and sieves separate the ribs, dust and any twine, wood, fibers and other foreign matters which may have been packed with the tobacco. There is no loss of leaf-matter in these operations. The large loss of weight is due entirely to the exclusion of midribs and dirt.

It is essential that tobacco be blended if a reliable product is desired. The grades of leaf grown in any given locality, as is well known, vary considerably each season. This variance increases with the distances from which any given stock of leaf is drawn. Consequently, unless some way be found to counteract these changes, we would be obtaining tobaccos of different flavors every time we purchased a new supply. The most practical way to overcome the variations in natural flavor, due to soil and climatic conditions acting on the growing plant or in the curing barns, is to blend to a uniform standard in the factory. This can easily be done by mixing a small quantity of high-grade foreign leaf, or its local equivalent, with domestic grades.

This blending is done in blending machines which are fed with definite quantities of the selected grades. Turkish leaf is usually employed for blending with good domestic tobacco for the best classes of cigarettes. The rich mellowness of the finest Turkish tobacco makes it exceptionally valuable for developing the rarer qualities of the best American leaf and most particularly the delicate qualities of our beautiful Virginian yellow or golden cigarette tobaccos.

Turkish Blends

Sometimes large quantities of Turkish tobacco are blended with American and the cigarettes are then distinguished by being called Egyptian or Turkish. These are both misnomers, because the Turkish tobacco comes from certain districts in Thrace, Macedonia and Thessaly, as well as Smyrna and Turkey, and practically no Egyptian-grown leaf tobacco is imported. However, cigarettes made from the so-called Turkish tobaccos are reputed to be among the best sold in all countries and no good will be secured by dwelling upon the laxity shown in the nomenclature.

The blended tobacco, now released from years of incasement, is spread on moving belts and carried to revolving cylinders, where it is treated by fine sprays of steam. Later it is dried in a "cyclone" by warm air and collected in trucks where a further intimate blending process continues.

Shredding the Leaf

Shredding the leaf now takes place. The tobacco is carried from the blending trucks to the shredding machines on traveling conveyers. These are large presses resembling the guillotines used in printing houses for trimming paper. A shredding machine has a daily capacity of about 2½ to 3 tons of tobacco. In order that the leaves may be cut into the fine, even threads necessary for high grade cigarettes, they are pressed in iron moulds and cut by giant knives resembling in construction those used in safety razors.

The tobacco cut in these machines falls in wavy streams from the hoppers under the shredders on to traveling belts and is carried to the large steam-heated drying cylinders where the excess moisture is evaporated at a temperature of about 150 degrees Fahrenheit. The tobacco has now a beautiful golden hue. It is again fed on to traveling belts and carried to cooling cylinders and thence is loaded into movable bins called "Saratogas" where it is allowed to ripen for about 24 hours.

Brought to Perfection by Machinery

The tobacco is now mellowed, and beautifully

he Utility of Mechanical Devices in the Manufacture of Cigars

Employment of Automatic Machinery a Boon to Many Manufacturers — Plants Enabled to Standardize Products and Increase Output — Good Machine Turns Out Cigar in Less Than Seven Seconds—Uniformity Unexcelled by Hand Workers.

By H. J. LAUGHTON

IGAR manufacturing has been revolutionized in recent years by the employment of automatic machinery of great efficiency. This machinery enables manufacturers to keep up a large output of standardized products d to the most extensive needs of the cigar . Cigars are now made in some of the most ern factories almost entirely by machinery. ood automatic machine turns out a finished in less than seven seconds and its uniity is unexcelled by hand workers.

Old American Industry

gar making is an old American industry. an Block, a celebrated Dutch navigator and of the earliest settlers in New York City, blished a cigar store and factory on the ent site of 35 Broadway, in 1613. Pierre llard, a French snuff expert, came to New k in 1760 and established a snuff manufacng industry which quickly prospered and equently developed into the great modern rette and tobacco factories bearing his names. olonel Israel Putnam established one of the successful Cuban style cigar factories at ufret, Connecticut, about 1763. Later on pened one of the first import houses in New k which handled West Indian cigars.

here was an active cigar industry in Virn and at Maysville, Kentucky, in 1812, when rs were manufactured by hand at a cost of ents per thousand. Slave labor, of course, the cause of this extraordinary low cost.

New York's Preeminent Geographical Position

ew York, owing to its superb geographical tion, has always been a busy cigar manufacng and distributing center. The old city rds are full of interesting notes about the y cigar trades. This is a receipted bill dated w York, 24th October, 1796," shows that Mr. brook "Bot of Peter & George Lorillard" *segars* for which he paid eleven shillings. ssuming that the shillings given were not lish shillings but York shillings—a York ing was the eighth part of a dollar—the ing price of the cigars was $2.75 per sand.

nother bill, dated "New York, 13th Octo- 1809," showing that Balden Brown, Esq., ught of Peter & George Lorillard, 30 ltham Street," 200 *segars,* offers proof that ire Brown obtained his cigars at the rate $2.08 per thousand.

third document, having "New York, 14th tember, 1815" on the date line, is written lence that N. Willes & Co., who "Bought George Lorillard, No. 30 Chatham Street," for cigars as follows:

1,000 New Orleans *segars*	$4
1,000 Spanish *segars*.....	16
1,000 common *segars*	3

s cigars that passed through the custom se in 1815 paid duty at the rate of $4 per sand, it is evident that, of the items on bill, only the "Spanish *segars*" were imced.

Whether the "Spanish cigars" came from a or Mexico, who can say? At that time a Cruz shipped more cigars to the United es than Havana did. In those days, as the e indicates, New Orleans cigars were acnted superior to cigars made elsewhere in country.

n the bills above quoted from no mention is made of the size of the cigars. Nor is there any intimation of where the "common cigars" were made.

C. H. Lillenthal founded a tobacco business on Barclay street, near the Hoboken ferry, in 1812, and built it up substantially. The establishment he bequeathed to his son, Christian H. Lillenthal, was notably prosperous for a long time. But "trouble descended on the house" some years after the Civil War.

Charles Speights, who had a place of business at 73 Bowery in 1813, probably was the first dealer in New York to advertise mild cigars. On handbills that he distributed appeared the following verse:

"The old stand seventy-three,
Is the stand for me,
With its 'Maccaby' and 'Rosendee';
Its cigars, they say,
Smell like new hay—
They smoke so free and mild—
Just give us a call,
Both large and small,
Attention pays a child."

In New York, three-quarters of a century since, the Yara principe was a favorite cigar. It was "a rough and ready," having a twisted or as it was called then a "kink head." It had neither symmetry nor fine appearance. And Yara tobacco, a product of Eastern Cuba, is not so popular now as it used to be. Cigar making did not become an art much before 1840.

"Tom's Place" on what was Tryon Row, opposite the old Hall of Records in City Hall Park, was a resort for men who sought "fine cigars," 75 years ago. There Yara principes, "the very best, sir," retailed for three cents apiece. Those inclined to be more economical in the purchase of smokes could by "half Spanish cigars," cigars made more aromatic by cinnamon, or cigars flavored with anise, "two for one cent."

Thomas Hoyt was manufacturing cut tobacco and cigars at the corner of Dover and Water streets before 1850. His Sunny Side brand, afterwards owned by D. Buchner & Co., was introduced about seventy-five years ago. John Anderson's Solace, the source of his riches, was made in Duane street near West street. A Mr. Lemon's name was over the door after Anderson's, and S. S. Edmonston & Bro. subsequently became proprietors of the place. In the early fifties Anderson's original cigar store was on Broadway, between Duane and Pearl streets. Later he reared a marble-fronted factory on Liberty street, and fitted up his then palatial cigar and tobacco store in the brownstone building on the corner of Pine street and Broadway.

Tom Wayne had a cigar store and a small cigar factory in 1853, where the New York end of the Brooklyn Bridge is now.

Start of Great Fortune

Joseph Hall was a noted cigar manufacturer even in the late forties, and his son Thomas H., if then born, had not thought of the economical little cigars, Between the Acts, from which in after years he made fame and fortune. David H. McAlpin, one of the first of the great tobacco magnates then, had a prosperous cigar store and factory on Catherine street. In 1857, by purchase McAlpin became the owner of the cutting tobacco factory founded in 1849 by John Cornish, near Sixth street and Avenue D. There McAlpin originated the Virgin Leaf fine cut chewing tobacco, which proved a veritable gold mine for him.

The introduction of machinery into the cigar industries was gradual. Machine molding and bunching was first developed. By degrees other operations were carried out by means of machinery. Today there are plants operating machines which completely make cigars without handling. A machine made by the International Cigar Machinery Company, which is typical of modern practice, has an output of between 20,000 and 30,000 cigars weekly. These machines can be designed to make any size or shape of cigar having both binder and wrapper and any kind of tobacco can be used for filler, binder or wrapper.

The filler leaf is fed, measured, and segregated into the quantity required for the bunch at a cutting station and is then transferred to a rolling belt where it is wrapped in the binder leaf and formed into a bunch. A series of belts, guiding plates and gears conducts the bunches through the process of bunch rolling, softening and crimping. Very ingenious mechanisms then seize the bunched product and places the binder around it. Then the cigar is fed into the wrapping, rerolling and trimming divisions and finally to the banding machine. Banding machines are adjustable for any shape or size of cigar. They can place bands on cigars at the rate of from 15,000 to 20,000 per day.

Package Machinery

Other machines make the boxes and pack cigars in them. When cardboard is used for packing little cigars the board is printed, cut, creased and folded automatically and finishes the package by gluing, or clamping. Such packages are made at the rate of 30 to 50 per minute.

Many American cigar manufacturers pack their cigars in ornamental cans. These are also made, printed, stamped and packed by automatic machinery of a most efficient type.

Automatic cigar machinery not only enables manufacturers to increase their outputs to meet pressing trade demands but it considerably alleviates labor conditions and enables American factories to meet foreign competition in the world's markets.

Hand Work Expensive

Advancing wage scales have made it practically impossible to produce cigars by hand at a fair profit under existing conditions. The productive possibilities of an individual hand worker will not exceed 2,200 cigars weekly, and even at the top prices for hand work the cigar maker can not look forward to an income of more than $35 to $40 weekly. It is small wonder, therefore, that no young men are learning the cigar trade and the hand manufacturer finds himself struggling along with a steadily decreasing labor supply and steadily increasing costs.

When we carefully inspect the cigars made in a modern machine plant we are surprised to discover how uniformly they are filled, shaped, moulded, wrapped and finished. They are pleasing to the eye, just as they are satisfying to the taste. Automatic cigar making machines have benefitted the cigar trade precisely as cigarette making machines have benefitted the cigarette industry. They have likewise improved the sanitation of cigar factories and have made the modern cigar a thoroughly hygienic product. Like the cigarette machines, the cigar making machinery is almost entirely the result of American inventive genius.

Growth of Machinery in the Manufacture of Plug and Twist Tobac

Great Strides Made Between the Days of Crumbling Raw Leaf in the Hands and the Present Day Methods of Operating Massive Power Machinery in the Preparation of Blended Tobaccos for Chewing and Smoking—Industry a Worthy One

By CHARLES F. RICHARDS

GROWTH in mechanical means for preparing tobacco for use has been marvelous since the days when the raw leaf was "crumbled" in the hands, and "stuffed" into the faithful old pipe, until now vast manufacturing establishments are equipped with great batteries of massive machinery, driven by steam or electric power, in the preparation of chewing and smoking tobaccos.

Pipe smoking began with the early visits of Europeans to America. The Spaniards and British sailors learned the custom from the American Indians. Naturally, the early settlers were attracted to the custom and many of them became veteran patrons of the pipe. They all had their own little tobacco plots on which the leaves were grown and they manufactured the tobacco needed for their own consumption. In the colonial days almost every farmer grew and manufactured his own tobacco.

Farmers Showed Skill

Some farmers developed great skill in this work with the result that neighbors became desirous of purchasing some of the surplus farm supplies. This gradually developed into tobacco trading both locally, with ships and ultimately with Europe. Then came a period when tobacco culture and manufacturing became the principal sources of income and revenue.

Political complications were caused in Europe by the rapid development of these colonial industries, and we find that in 1639 the people of Virginia and other settlements agreed with the British authorities to restrict the production of tobacco to 1,500,000 pounds in that year and to 1,200,000 pounds in the next two years ensuing. This was done to stabilize revenues and to prevent the European markets from being demoralized by overstocking.

Early Exports

Prior to the Revolutionary wars, the yearly exports of tobacco from Virginia averaged about 55,000 hogsheads of 1,000 pounds each. The exports in 1758 were 70,000 hogsheads.

The exports from the United States between October 1, 1791, and September 30, 1792, were as follows:

	Manufactured	Hogsheads
New Hampshire	.....	3
Massachusetts	110,525	1,221
Rhode Island	.....	1,429
Connecticut	.....	105
New York	1,600	1,952
New Jersey	.....	5
Pennsylvania	2,140	3,203
Delaware	.....	8
Maryland	780	28,992
Virginia	2,025	61,203
North Carolina	.....	3,546
South Carolina	624	5,290
Georgia	180	5,471
Total	117,874	112,428

Valuable Pointers

These statistics are valuable on account of the picture they present of the state of the American tobacco industries in the early days. They show that even early exports of manufactured tobacco exceeded the exports of leaf tobacco. They also show how quickly the early colonists discovered the states and localities best adapted for raising crops and for sites for tobacco manufacturing.

Crude Machinery Used

Machinery, in a crude form, was used by the early settlers. There are drawings in old manuscripts of colonial times showing wheels and looms for weaving tobacco twists, moulds, trimmers, cutters and presses for plug and chewing tobacco and sieves and drying cylinders for the treatment of leaf. The manufactures of plug and twist tobaccos have undergone continuous improvement since the earliest times. Hardly a year passed without some substantial improvement being made in the process and plant for converting tobacco into usable forms.

Cigarette Machines Showed the Way

The successful operation of the cigarette-making machines in the early seventies stimulated improvements in the whole line of machines used in the tobacco factories. The statistics show that manufacturers of plug and twist tobaccos were enabled to keep pace with the great development of smoking caused by the popularity of the improved machine-made cigarette by the new inventions made plug making machinery. The machinery has now reached a very high state of development, but it is being continually improved. Today, plug tobacco, like cigarettes, is made almost entirely by machinery.

Plug and Twist Tobacco

Burley tobacco is chiefly used in manufacturing plug and twist tobaccos. The first step in the manufacture is the shaking out and casing of the tobacco received at the factory in hogsheads. This is done with the object of freeing the leaf and separating trash and foreign materials from it. There are various types of scrap and cleaning machines. The general principle of these machines is an inclined plane sieve upon which the tobacco falls and an upward air current from a power blower which effects the separations of the lighter materials. The heavy materials are separated by conducting the screened leaf through heavier conicle trommels. The capacity of the ordinary cleaner is between 1,500 to 2,000 pounds of leaf per day. In some factories the screened leaf is passed over mechanical picking tables which are operated by endless belts. These machines assure the total exclusion of foreign materials from the leaf.

Screening Machines

When sand appears in fresh leaf, the tobacco is passed through a sand screen. These are large, revolving screen cylinders, operated by gearing which shake and screen the tobacco thoroughly. Sometimes the tobacco is passed through a series of these machines having screens of different mesh.

The tobacco is then sorted and cased by water-sprays of steam. The mid-ribs are removed by special machinery and each leaf is then dipped into a flavoring mixture to aid in the development of a special flavor after a succeeding fermentation. Licorice, sugar and molasses are substances employed in flavoring mixtures. They are found to exert favorable effects in developing the aroma and taste of good tobacco in the fermentation and aging processes probably by the promotion of bacteriological activities.

The tobacco is segregated and weighed into quantities large enough to form plugs. Each of these is fed into a mould and pressed by hydraulic power into the plug form. Then the wrapper leaf is put on and the plugs are again pressed and subjected to the final fermentation while under pressure.

Essential Features

This is the most delicate part of the manu ture. The character, aroma and taste of finished product very largely depend upon care and skill exercised in this operation. plugs are finally branded, tagged, wrapped packed in boxes or casks for the market.

Some plugs, intended for making cut or r tobacco, are run through cutting and ro machines, and in some cases, roasters and processing operations in order to develop sp characteristics.

Granulated Mixtures

Some pipe mixtures are sold in granul form. The granulation is done in granula These machines comprise a stem breake grinder, a separator, a fiber fan and roller g ulator. The capacity of a granulator plant va from 4,000 to 8,000 pounds per day.

Fine cut tobacco is the result of special t ment in power cutters. These mach straighten out the strands of the leaf, sift and cut them into the desired sizes.

Auxiliary Machinery

In every tobacco factory, in addition to above process machines, there is a large am of auxiliary machinery for conveying the to co from department to department, to and the presses, screens, casing and flavoring c ders. Everything is arranged to make the tire process of plug making as automati possible. The result is that between the re of the raw tobacco at the factory and the going, packed and crated finished product tobacco is hardly touched by hand.

Twist tobacco is made precisely as plug is only cut and moulded differently and ir final treatment it is twisted in special twi machines while hot and moist.

Chewing Tobacco

Chewing tobacco is simply a highly flav variety of plug. It is made in exactly the manner. The flavoring is made in the treatment of the leaf and is intensified and veloped in the final fermentation process u high hydraulic pressure. Chewing has al been a favorite method of using tobacco workmen and farmers. The manufacturin chewing tobacco has kept pace with all forms of plug, twist and cut smoking mixt There are numerous brands of highly este chewing plugs on the market and these, lik other forms of American tobacco manufact continue to show increased consumption an creased exports.

The Secret of Success

The extensive employment of modern ma ery in tobacco factories and the resulting e lent products are the secret of the extraord increase in the demand for plug and twis baccos. Last year's figures show that smoking is now more popular and prev than at any previous time and it promis rapidly increase.

American tobacco manufacturers have al been optimists. They realize that as Am produces the finest leaf tobacco, the expend of capital, the use of the best manufact processes and the employment of the finest most efficient machinery would enable the forge ahead in meeting the world's compe in smoking tobaccos. They gained the away back in the early colonial days and have never been surpassed. The statisti record show that America has led and cont

ead all countries in both tobacco production
l in manufactures. All the world over this
premacy is recognized.

Age-Long Reputation Maintained

n early colonial times, the quality of Ameri-
tobacco was established and the high stand-
ls then attained have been kept. The smok-
world knows very well that every need of
smoker with respect to the type and quality of tobacco desired by him can be met by American manufacturers. With the spread of smoking, there has developed a great variety of smoking mixtures.

There are fine or coarse, mild, strong or flavored, to meet a multitude of tastes. It is, therefore, not to be wondered at that, as a result of American pre-eminence in tobacco manufactures, the great variety of smoking tobaccos made, the splendid manner in which they are packed and displayed, and the fine reputations enjoyed by the leading manufacturers, that tobacco smoking is forging ahead by great leaps and bounds, and the tobacco industries are experiencing an ever-growing prosperity.

They finely illustrate how well it pays to utilize to the utmost the latest and most efficient machinery and to be unsparing in the proper equipment of factories. The industry is worthy of all the many improvements made.

he Manufacture and Use of Tobacco Snuff From Sixteenth Century

Machinery Plays Important Part in Production of Snuff, Which Is a Valuable Industry — Use of Snuff Keeps Pace With Other Tobacco Products — Mechanical Means Enable Manufacturers to Provide Uniform Article Unknown in Early Days

By DR. ARTHUR SELWYN BROWN

SNUFF in these days of cigarettes, cigars and pipe mixtures, is not so much talked of as in earlier days. Nevertheless, snuff making is a large, growing and valuable industry, in which machinery is quite an essential factor.

the year 1896, 12,708,919 pounds of snuff ere manufactured in the United States as com-red with 11,761,690 pounds of fine cut smoking bacco.

There are at present 35 factories in the United ates, employing 1,328 wage earners, manu-cturing snuff, valued at many thousands of llars per annum. The capital invested in these merican snuff factories, for plants, machinery id equipments, amounts to about $45,000,000.

The progressive development in the produc-on of snuff in the past decade, largely due to achinery is shown by the statistics in the fol-wing table:

American Snuff Production, 1897-1922

Year	Pounds	Year	Pounds
897	13,768,455	1910	31,445,178
898	13,607,631	1911	28,943,754
899	14,723,392	1912	31,363,651
900	13,805,311	1913	32,898,056
901	17,513,317	1914	30,595,640
902	18,682,341	1915	31,898,407
903	22,689,767	1916	33,969,594
904	20,221,400	1917	33,516,802
905	23,671,078	1918	37,100,382
906	26,115,285	1919	35,024,104
907	24,175,219	1920	35,007,882
908	24,035,738	1921	34,349,000
909	28,454,958	1922	35,100,000

Habit Increasing

These figures very clearly indicate that the snuff-using habit is increasing and is creating a cumulatively larger demand for snuff each year. Between 1897 and 1909, the production of snuff was doubled. Today the annual production is nearly three times as large as it was in 1897.

Increased Revenue Collections

The increased demand for snuff is also shown by the revenue returns. These disclose that between 1863 and 1922 the following taxes were annually paid on the manufacture of snuff in the United States:

Internal Revenue on Snuff Manufactures, 1863-1922

Year	Revenue Tax	Year	Revenue Tax
1863	$ 34,466	1905	$1,267,912
1866	689,174	1906	1,362,452
1869	525,584	1907	1,404,072
1870	373,785	1908	1,352,866
1873	1,082,049	1909	1,621,178
1875	1,067,033	1910	1,920,603
1878	1,063,714	1911	2,251,747
1880	634,609	1912	2,406,359
1884	448,212	1913	2,656,757
1889	645,089	1914	2,621,339
1890	737,731	1915	2,387,126
1895	649,889	1916	2,653,655
1899	1,751,798	1917	2,830,220
1900	1,790,090	1918	4,049,402
1901	2,003,021	1919	5,134,366
1902	1,696,429	1920	6,948,931
1903	1,130,455	1921	5,795,402
1904	1,209,456	1922	6,300,520

Since 1918, the revenue taxes on snuff manufactured in the United States have averaged about $5.000,000 per annum. This is five times the average about the 1898 period, and ten times the average about 1870. These increased returns are due chiefly to greater production, sales and consumption of snuff. A comparison of these statistics with those showing the growth of cigarette and plug tobacco production indicates that the consumption of snuff in America is keeping pace with the consumption of cigarettes and other forms of tobacco.

The Growth of Snuff Taking

Snuff taking developed in Europe and America in the early part of the sixteenth century, when tobacco was believed to be a universal curative agent. It was smoked in pipe to remedy bronchial and stomachic troubles after it had been prepared by drying and rasping to a fine powder. Every pipe smoker carried a tobacco rasp to pulverize his pipe tobacco. From the use of pulverized smoking tobacco to the inhaling of snuff was a short step. We, therefore, find that tobacconists soon displayed powdered tobacco prepared ready for smoking or snuffing.

Neander, in a text-book of medicine published about 1600, referred to snuff as follows:

"Sternutatories, especially those which are made of tobacco, when drawn into the nostrils, induce sneezing and release the slimy humors from the ventricles of the brain. These remedies benefit patients whose brains are full of vapours or are lethargic, despondent, angry or have headaches." He then gives several recipes for snuff mixtures as is customary with medical men. These are just formal combinations of herbal extracts with tobacco powder. Neander showed that these early snuffs were much milder than the sternutatories they displaced, which were made of ginger, euphorbium, pyrethorm and helleborous. Other medical works of the period state that snuff is a sterling remedy in cases of catarrh and diseases of the throat and lungs.

Snuffed for Medical Benefits

Society in England and France took snuff for medicinal purposes so extensively that they developed a liking for it and snuff, thereafter, became a great and expensive luxury. Accounts of certain English noblemen show that they spent over $1,000 per annum in purchasing snuff. The following are a few of the items of snuff consumed by the Earl of Harrington in 1830; 18 pounds of Old Bureau snuff; 18 pounds of Old Cologne snuff; 18 pounds of Old Arras snuff; 12 pounds of Old Havre snuff; 18 pounds of Bureau D. G. snuff; 6 pounds of French Prize snuff; 1 pound of French Prize snuff; 5 pounds of Old Rouen snuff, a favorite variety.

The Prince of Wales, the King and other famous users of snuff spent much larger sums than Lord Harrington. Many of the big snuff consumers had fancy snuffs named after them. The King, for instance, was honored by the names of the following snuffs sold in England: The King's Morning Mixture; The King's Evening Mixture; The King's Plain Mixture, and The King's Carothe snuff. Other popular snuffs were: The Frankfort, Seville, Morocco, Paris, Longueville, Scholten, Bordeaux, Tabac de Paris, Curasoa, Spanish Bran, Morlaix, Tabac de Rouen, St. Vincent, Mannheim, Strasbourg, Violet Strasbourg, French Carothe, Macouba, Masulipatam, Bureau Fine, Gureau Demigros, Etrenne, Marina, French Prize, Rapé de Lyon, Fason de Paris, Buenos Ayres, King's Martinique and varieties of these which went under other fancy names.

The price of snuff early in the eighteenth century was about one pound sterling per pound. That would have been equivalent to between $20 and $25 in our money in purchasing power at that time. The King's Martinique snuff was quoted in London in 1830 at 21 shillings per pound, or about $15 in present equivalents.

New Types Introduced

New types of snuff were put on the English markets in 1840. The Duke of Rutland's Lord Edward Bentencks, Old Paris, Fribourg's Mixture, Amsterdam, Arthur's Club Mixture, Dutch Carothe, Light Dutch, Dunkirk, Bolongars, Brazil, Prince Regent's Mixture, Robillard, Hardhams No. 37 Mixture, the Letter F Mixture, Cuba, Cologne, Nut Brown, Oronoco, Dieppe, Scented Bergamothe, Montagne, Montaban, the Queen's Mixture, Brussel's, Marino de Leipsic, Doningo, Villegranche, Dutch Bran and d'Abbeville.

Chiefly French and British Make

These were chiefly of French and British make. Holland, Germany and other European countries, however, also made snuff, some of which was marketed in England.

The naming of a mixture after the Queen indicated that women were like men, devotees of snuff. The account books of the old snuff makers show many names of women buyers. These women bought snuff as freely as men.

An Expensive Luxury

Spanish Bran snuff was first made in 1760. It enjoyed a wide popularity and in 1800 cost £3, or the equivalent of about $30 in purchasing power today per pound. It was moistened with an aromatic rose-scented vinegar called Vinagrillo, imported from Spain. Similar flavoring extracts were used with other snuff powders. Aromatic powders were also sold to be mixed with certain brands of snuff before they were used. Ladies were large consumers of Dutch Bran snuff.

Macouba and Masulipatam were Oriental snuffs richly flavored with the attar of Persian and Turkish roses. These snuffs were too rich

for use without dilution. They were sold in fancy glass bottles from which they were withdrawn with specially made spoons or skewers. The cheaper kinds of snuff were used to mix with them so that they could be taken with comfort. Brazil snuff was also extensively used for flavoring cheaper varieties. A dash of Brazil always improved the tone of other snuffs.

Used in Moist Condition

All the above snuffs were taken in a moist condition. They were moistened with water containing a little salt and an aromatic oil. This was slowly and carefully worked into the snuff in a wooden mortar.

Some snuffs were used in a dry state. Irish, Welsh and Scotch snuffs were first used dry. The Lundy Foot High Toast snuff, a popular Irish brand, was used dry for over a century. It is still obtainable. The Welsh and Scotch types of snuff were always of much finer grain and quality than the Irish. They are still popular in Europe.

Sabilla snuff, manufactured in Spain, has a brick red color, and is considered a valuable tooth powder. It also has a reputation as an antidote for toothache, neuralgia and other facial pains.

Sold in Fine Packages

Snuff was sold in the early days in fine glass bottles and artistic pottery. The various manufacturers spent no pains, like modern perfume makers, in putting up their snuffs in the finest kinds of packages.

Ordinarily, a snuff taker consumed between one and three ounces of snuff daily. Great snuff takers like Lord Petersham, took almost double that amount.

The art of the jeweller was taxed in making tobacco rasps and snuff boxes for fashionable snuff devotees. Many of these, as well as fine samples of glass and pottery snuff jars are preserved in European museums.

A Snuff Formula

A text book on snuff making, published in 1700, described the process of snuff manufacture then employed as follows: "Powder the dried tobacco and put it into a strong linen cloth bag. Soak it in a trough of distilled water for 24 hours. Squeeze the water from the tobacco and spread the powder in wicker hurdles to dry in the sun. Store carefully at frequent intervals. When thoroughly dry, put the powder into a bowl and gradually add distilled water and perfumed oils and mix to a paste. Dry the paste and then work in the finishing perfumery and aromatics."

Rose-leaves, mint, cloves, cinnamon, and other substances rich in aromatic oils were often dried, powdered and mixed with snuff to add characteristic flavors. The finishing and blending of the snuff in the great days of snuff making was work which required the services of highly paid experts like the tea and tobacco tasters and blenders of today.

Chambers Encyclopedia, the 1727 edition, says of snuffs then in use: "The kinds of snuff and their several names are infinite. New ones are continually being invented. They are classed in three main divisions—granulated, bran and powdered."

Early Antis

There were strong opponents to snuff taking when it first became universally popular, just as there are today opponents to smoking. The snuff-takers, however, had plenty of champions. The English poet, Arbuckle, for example, answered an opponent rhymster's verse with the following interesting poem:

"With snuff the beauteous Celia shades her face,
And adds a foil to every obvious grace;
Her lips o'erspread with dusky Vigo, speak
The brighter color on her lovely cheek;
Nay, underneath the tawny shade they wear,
The lips themselves more beautiful appear.
For beauty masked, like the great few who shun
The praise and honor by their merits won,
By how much it denies its own applause
Or seems but so to do, a greater draws
For, apt to imagine more than is concealed
The fancy heightens every charm that's veiled."

Captured Shipload of Snuff

The dusky Vigo referred to in the third line of Arbuckle's poem was a very favorite snuff of the time which was captured by British privateers from Spanish ships off the coast of Spain. Just before the poem was written, Admiral Sir George Rook, with a fleet of warships, captured a convoy of Spanish ships which were loaded with Havana snuff. This glutted the British markets and brought the price of snuff down to 4 pence (8 cents) per pound.

The fashionable world in Europe began to discard the elegant habit of snuff-taking to promote sneezing in favor of cigars and pipe smoking about 1850. In 1859 the amount of cigars and smoking tobacco sold and consumed in England was as large as the snuff consumed. In the "sixties" the use of tobacco outstripped the use of snuff and has since kept up its lead.

A Change in Customs

George Evans, a member of the firm of Frebourg & Treyer, among the leading London tobacconists, which were formerly the greatest manufacturers of snuffs in Europe, writing of the decline of the firm's snuff trade, said:

"Up to 1830, the sale of tobacco and cigars was comparatively insignificant to that of snuff. Snuff predominated until 1845. In 1859 cigars and smoking tobacco exceeded snuff consumption.

"The use of snuff among the gentry then very gradually declined, although it was not entirely finished with at the end of the nineteenth century. The last customers of our firm to order snuff in quantities of two pounds at a time were the late Earl of Mansfield and A. R. Hudson of Pershore. Other notable customers in the last days of society snuff-taking were Judge Vaughan Williams, George Richmond, R.A., and Lord Russell of Killowen, the distinguished lawyer.

"Fortunately for the snuff houses, the decline in the use of snuff was gradual and the sale of tobacco and cigars quickly replaced the profits lost on snuff.

"When our firm began the sale of cigars and tobacco, our customers regularly made a practice of dropping in to our store in the afternoon to sit there for an hour and smoke a cigar. It was a regular custom of the time. In most cases, these customers expected to talk and be talked to and the time that was unavoidably taken up in this way was considerable. Some customers made a practice of keeping an open box of cigars of their own so that they could come in and help themselves when they liked, the idea possibly being that it was more economical to keep an open box of cigars at Freborg & Treyer's than at their own office. A special department was kept for these boxes, each of which bore the owner's name. At this time, the firm gave its customers credit. Fully 70 per cent of its customers had accounts on its books and were personally known to the shop attendants."

The Methods of Manufacture

In a modern American snuff factory the process of snuff making is similar to that used in preparing smoking tobacco excepting that fermentation is carried further. Machinery is used in the preliminary stages exactly as in making smoking tobacco.

It requires between six months and a year to convert the raw materials into finished snuff. Fermentation and seasoning operations consume most of this time. The raw leaf tobacco is choice two-year-old or older stock and only the finer leaves are selected.

After fermentation, the leaf is dried in drying cylinders and is then grained. It is then ground in milling machines or millers. Then the ground product is sieved and sorted. The finished product is then seasoned in seasoning rooms, the process requiring from three to six months. Afterwards the snuff is packed, labelled and marketed.

Varieties of American Snuff

The chief varieties of snuff made in Ar
are strong or plain Scotch, Sweet Scotc
Salt Scotch. A heavy Scotch snuff kno
Hightoast was once largely made, but it i
going out of favor. Maccaboy, a moist
very highly flavored, is another old favorit
is falling in unappreciative days. Rape
French type of snuff, is made in limited am
and also Swedish snuff, a coarse, highly fla
moist snuff.

The extensive use of machinery in snuf
tories enables manufacturers to turn
uniform standardized product which is p
and labelled as attractively as cigarettes
smoking mixtures. Since the wide introdu
of automatic machinery in snuff factories,
types of snuff have been marketed and th
numerable varieties made by the old hand m
facturers are almost forgotten. It is prob
however, that the modern factory product
the whole, just as superior in comparison
the old type of snuff as modern machine-
cigarettes are superior to the old hand-
brands.

The Cardwell Machine C

For nearly a century the Cardwell Ma
Co., of Richmond, Va., has been manufa
ing tobacco machinery, beginning
shapes or moulds for plug tobacco. In
when the business was established, the
pound lump plug was made in a wo
frame. The first successful iron shape
made in 1842. From that beginning, m
improvements have been made, culmin
in the tobacco shapes or moulds of toda

Starting with tobacco shapes or mould
plug tobacco, the Cardwell Machine
gradually enlarged their line, until they
practically a complete line of machinery
the manufacture of plug tobacco, then
smoking tobacco, cut, and cigarette tob
until they were able to produce a com
line of machinery for the tobacco indust

The first branch of their business st
in 1829. The second in 1849. These
consolidated and incorporated in 1890.
started building their new plant in 1893,
moved into it in the summer of 1894.
plant is equipped with modern tools and
chinery, special appliances for turning
their product to the best advantage.
are continually designing and getting up
and improved equipment to meet the
mands of the industry.

The Cardwell organization has for y
been developing equipment to utilize as m
of the tobacco as possible, and to this
they have devoted great attention to
vide efficient methods of cleaning and s
rating the tobacco from foreign matter
also separating different kinds of tobacc
different products of tobacco, each mor
less valuable when separated but of littl
no value until it is separated.

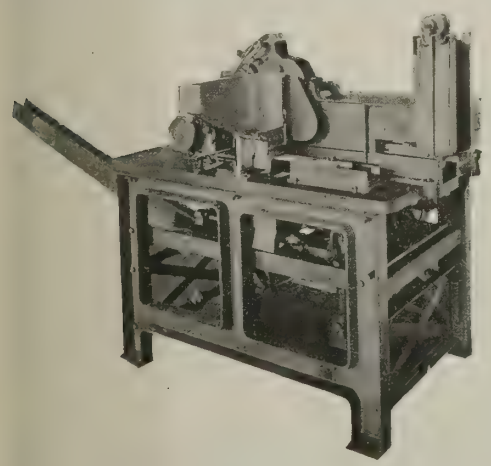
The plant is a large one, comprising
machine shops, blacksmith and forge sh
woodworking and pattern shops, and eq
ment for iron and brass castings. The
chine shop equipment is up-to-date. The l
shop can bore and turn a wheel 10 fee
diameter, and turn and thread a screw 24
long. In it are lathes, planers, drill pre
milling machines, gear cutters and all sin
machinery for turning out the best clas
work. The small machine shop is equip
with a full assortment of tools for buil
automatic machinery or producing work
quiring extreme accuracy.

Among the products of the Cardwell
chine Co. may be mentioned the hydra
tobacco press, duplex pump and the
bill basket truck.

The hydraulic tobacco press has pr
its worth for a number of years. The st
ard press gives nearly 30 tons pressure

te tobacco; the extra heavy press, 40 tons. Hundred-ton presses can be supplied if required. The standard press has a 6-inch solid ram, with a safety device which prevents it being pumped out, an accident which would be likely to break the plunger. The press has 9 feet "daylight" between the floor and the top plunger. This permits the use of a high curb and a hogshead is usually filled completely at one operation. The top plunger is 4 feet deep, built of double extra heavy pipe and wrought iron rods and plates, with no threads to strip under pressure. Stout wrought iron saddles support the cylinder. The dimensions of the press may be varied to conform to a customer's requirements.

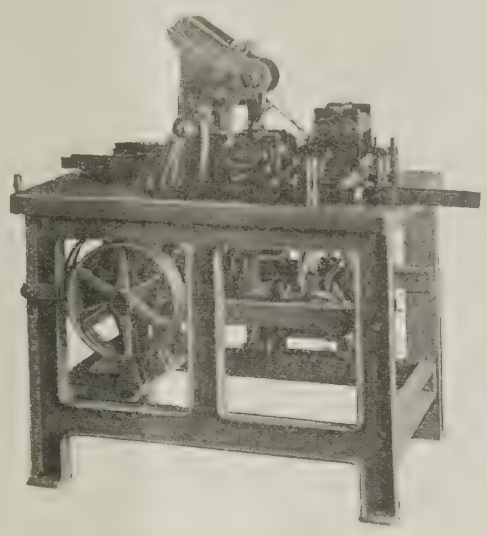
The Cardwell presses are simple and durable. With the press are furnished special trucks or drawings from which the trucks may be built by the customer. A hogshead is loaded on one of these trucks and run on the press. The pump is then started and the tobacco is pressed down into the hogshead. The pump is stopped, the return valve opened, the plunger comes down and the hogshead is run off. After the hogshead is completely filled, the head is put on, preferably by use of the Cardwell heading-out device which enables a man working on the floor to nail in the head.



The duplex power pump, belt-driven, is used for the rapid operation of hydraulic presses. It is solidly built and weighs about 1,700 pounds. It has four plungers, two large and two small, all of which are set to work in starting so that the ram goes up quickly. As the resistance increases, the large plungers are cut out automatically and the small ones run up the pressure. A hogshead is usually prized in less than a minute.

The pump runs at 175 to 200 r.p.m. It is fitted with 36-inch by 6-inch tight and loose pulleys. A 5 h.p. electric motor or a 6 h.p. gasolene engine furnishes sufficient power to operate it properly.

The duck bill basket truck is built with a steel bottom and the sides are heavily reinforced with steel. The axles are turned and wheels bored. Roller bearings are fitted when desired. The truck is well built and durable. The wheels are small so that the truck is low and may be slid under a basket or pile of tobacco with little danger of upsetting it. It is the invention of C. W. Bohmer, of Lexington, Ky., and is rapidly taking the place of the wooden tobacco truck.



Comas Cigarette Machine Co., Incorporated

The Comas Cigarette Machine Co., Inc., of Salem, Va., has been manufacturing cigarette machines since 1889. This enterprising corporation manufactures solely machinery for the cigarette and tobacco industry. It concentrates its entire effort on the study of manufacturing problems, and is constantly designing new models to meet the ever-growing demand for efficient production.
